Operating Instructions
Safety Information

Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly. After you have finished reading the instructions, put them away in a safe place for future reference.

CAUTION
TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

VENTILATION CAUTION
When installing this unit, leave space of at least 10 cm at the sides (including when mounting to a wall) and at the top of the AV Speaker Bar. For the wireless subwoofer (SBX-N700 only), leave a space of at least 10 cm from the wall. Furthermore, to facilitate good heat dissipation, make sure there is a little distance between the other devices. When installing the unit in a rack or the like, leave space of at least 10 cm at the top, rear, and sides. Internal heat buildup may cause a fire.

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table cloths, curtains) or by operating the equipment on thick carpet or a bed.

Operating Environment
Operating environment temperature and humidity:
+5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)

Do not install this unit in a poorly ventilated area, or in locations exposed to high humidity or direct sunlight (or strong artificial light).

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

POWER-CORD CAUTION
Handle the power cord by the plug. Do not pull out the plug by tugging the cord and never touch the power cord when your hands are wet as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, etc., on the power cord, or pinch the cord. Never make a knot in the cord or tie it with other cords. The power cords should be routed such that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electrical shock. Check the power cord once in a while. When you find it damaged, ask your nearest PIONEER authorized service center or your dealer for a replacement.

This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.
Notice to users in Singapore
This product complies with IDA standards.

[European model only]

Information for users on collection and disposal of old equipment and used batteries

These symbols on the products, packaging, and/or accompanying documents mean that used electrical and electronic products and batteries should not be mixed with general household waste.

For proper treatment, recovery and recycling of old products and used batteries, please take them to applicable collection points in accordance with your national legislation.

By disposing of these products and batteries correctly, you will help to save valuable resources and prevent any potential negative effects on human health and the environment which could otherwise arise from inappropriate waste handling.

For more information about collection and recycling of old products and batteries, please contact your local municipality, your waste disposal service or the point of sale where you purchased the items.

These symbols are only valid in the European Union.

For countries outside the European Union:
If you wish to discard these items, please contact your local authorities or dealer and ask for the correct method of disposal.
For Wireless product European Union Notice

PIONEER hereby declares that this/these product(s) is/are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC, 2004/108/EC, 2006/95/EC and 2009/125/EC.

RF Radiation Exposure Statement
This equipment should be installed and operated with minimum distance 20 cm between the radiator and your body.

WARNING
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

NOTE: THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY RADIO OR TV INTERFERENCE CAUSED BY UNAUTHORIZED MODIFICATIONS TO THIS EQUIPMENT. SUCH MODIFICATIONS COULD VOID THE USER’S AUTHORITY TO OPERATE THE EQUIPMENT.

Important Notice for TV colour system
The colour system of this AV Speaker Bar differs according to currently playing video contents.
For example, when the AV Speaker Bar plays the video contents recorded in the NTSC colour system, the image is output as an NTSC signal.
Only the multi system colour TV can receive all signals output from the AV Speaker Bar.
• If you have a PAL colour system TV, you will see just distorted images when using video contents or video contents recorded in NTSC.
• The multi system colour TV changes the colour system automatically according to input signals. In case that the colour system is not changed automatically, turn it off and then on to see normal images on screen.

Introduction

Supplied accessories

- Height adjustment foot x2 (L, R)
- Wall mounting template x1
- Foot attachment screws for AV Speaker Bar x2
- IR cable x1
- Wall mounting cushion x2
- AAA dry battery x2
- Remote control x1
- Optical digital audio cable x1 (1.5 m)
- Power cord for AV Speaker Bar
- Power cord for wireless subwoofer (SBX-N700 only)

WARNING
Store small parts out of the reach of children and infants. If accidentally swallowed, contact a doctor immediately.
Putting the batteries in the remote control

1. **Open the rear cover.**

   ![Remote control rear cover open]

   **Place a finger on the tab and then pull up in the direction of the arrow.**

2. **Insert the supplied dry batteries (AAA x 2).**

   Insert the batteries as indicated by the + and - marks in the battery compartment.

   ![Remote control battery compartment]

   **Insert the negative end (-) first.**

3. **Close the rear cover.**

   Close securely (a click should be heard).

   ![Remote control rear cover closed]

**WARNING**

- Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

**Caution**

- Do not use any batteries other than the ones specified. Also, do not use a new battery together with an old one.
- When loading the batteries into the remote control, set them in the proper direction, as indicated by the polarity marks (+ and -).
- Do not heat batteries, disassemble them, or throw them into flames or water.
- Batteries may have different voltages, even if they look similar. Do not use different kinds of batteries together.
- To prevent leakage of battery fluid, remove the batteries if you do not plan to use the remote control for a long period of time (1 month or more). If the fluid should leak, wipe it carefully off the inside of the case, then insert new batteries. If a battery should leak and the fluid should get on your skin, flush it off with large quantities of water.
- When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country/area.
- When inserting the batteries, make sure not to damage the springs on the battery’s (-) terminals. This can cause batteries to leak or overheat.

**Software update**

Product information on this unit is provided on the Pioneer website. Check this website for update and service information on your unit.

**About operation of this unit from a mobile device**

The unit can be controlled from a mobile device by installing the ControlApp onto the mobile device.

For details, see the product information on the Pioneer website.

This special application may be changed or discontinued without notice.
Before you start

Playable files
You can play video, image, and audio files on USB devices or the devices on the network to which the unit is connected via LAN.

Supported video file formats
• Real RMVB (Only for ASEAN model)

Real RMVB logo is a trademark or a registered trademark of RealNetworks, Inc.

• DivX Plus HD
DivX Certified® to play DivX® and DivX Plus™ HD (H.264/MKV) video up to 1080p HD including premium content.

ABOUT DIVX VIDEO: DivX® is a digital video format created by DivX, LLC, a subsidiary of Rovi Corporation. This is an official DivX Certified® device that plays DivX video. Visit divx.com for more information and software tools to convert your files into DivX videos.

ABOUT DIVX VIDEO-ON-DEMAND: This DivX Certified® device must be registered in order to play purchased DivX Video-on-Demand (VOD) movies. To obtain your registration code, locate the DivX VOD section in your device setup menu. Go to vod.divx.com for more information on how to complete your registration.

DivX®, DivX Certified®, DivX Plus™ HD and associated logos are trademarks of Rovi Corporation or its subsidiaries and are used under license.

Note
• This DivX® Certified device must be registered in order to play DivX Video-on-Demand (VOD) content. First generate the DivX VOD registration code for your device and submit it during the registration process. Important: DivX VOD content is protected by a DivX DRM (Digital Rights Management) system that restricts playback to registered DivX Certified devices. If you try to play DivX VOD content not authorized for your device, the message Authorization Error will be displayed and your content will not be played. Learn more at www.divx.com/vod.

– This unit’s DivX VOD registration code can be checked at [Initial Setup] ➔ [Playback] ➔ [DivX® VOD DRM] ➔ Registration Code (page 48).
– The number of views is restricted for some DivX VOD files. When such files are played on this unit, the remaining number of views is displayed. Files for which the remaining number of views has reached 0 cannot be played (This DivX® rental has expired is displayed). Files for which the number of views is not restricted can be played as many times as you like (the remaining number of views is not displayed).

About video, audio, and image files and folders
Audio and image files can be played on this unit when the folders on the USB device are created as described below.

Example of folder structure:

Note
• The number of folders and files within a single folder (including the root directory) is limited to a maximum of 256. Also, keep the number of folder layers to a maximum of 5.

Note
• The file and folder names displayed on this player may differ from those displayed on a computer.

1. This unit supports FAT16, FAT32 and NTFS file systems.
2. WMA Pro, WMA Lossless and WMA Voice are not supported.
3. Apple lossless encoding is not supported.
4. Only for ASEAN model.

Note
- Depending on the file structure, server capacity and network environment, it may not be possible to play certain files, even for files indicated on the table of playable files above.
- When using wireless LAN, depending on the environment (radiowave interference) during sending/receiving of a large volume of data such as HD quality image files and WAV 192 kHZ/24 bit high quality audio files, images and sound may be interrupted during playback.
- Files protected by DRM (Digital Rights Management) cannot be played (not including DivX VOD files).
- AVCHD contents cannot be played via LAN.

Front panel

1 **STANDBY/ON**
   - Turns the power of the unit on/off (standby mode).
   - If the power does not turn off, operation will become possible if you press the **STANDBY/ON** button for more than 5 seconds to reboot the unit.

2 **INPUT SELECT**
   - Switches the input.

3 **VOLUME +/-**
   - Adjusts the volume.

4 **DIALOG indicator**
   - Lit when the dialog function is on.

5 **PORTABLE IN terminal (page 20) (3.5-mm stereo mini plug)**

6 **NIGHT indicator**
   - Lit when the night function is on.

7 **SURROUND indicator**
   - Lit when the surround is on.

8 **Display window**
   - Displays the input mode, unit function status, etc.

9 **Wi-Fi Direct/Miracast indicator**
   - Lit when connected by Wi-Fi Direct or Miracast.
   - Flashes when waiting to connect.

10 **Remote control sensor**
   - Point the remote control to this, then operate it within approximately 7 m. The unit may have trouble capturing remote control signals if there is a fluorescent light nearby. If this happens, move the unit away from the fluorescent light.

11 **BT TRANSMITTER indicator (page 38)**
   - Lit when connected with a Bluetooth receiver.
   - Flashes when waiting to connect.

12 **USB port terminal (page 26)**

13 **BT AUDIO indicator**
   - Lit when connected with a Bluetooth transmitter.
   - Flashes when waiting to connect.

2. Optical digital audio input 1 terminal (page 20)
3. Optical digital audio input 2 terminal (page 20)
4. LAN (10/100) port
5. HDMI OUT (ARC) terminal (page 19)  
   Connect a TV.
6. AC IN terminal  
   Be sure to connect this last.
7. Wall mounting fittings
8. Internal IR repeater lens

Wireless Subwoofer (SBX-N700 only)

1. RESET button  
   Starts pairing of the AV Speaker Bar and wireless subwoofer.  
   Use this button when no sound is output from the wireless subwoofer. (page 52)
2. STANDBY indicator  
   Flashes red during pairing of the AV Speaker Bar and wireless subwoofer.  
   It turns off when pairing is complete.  
   When the power of the AV Speaker Bar is turned off, this indicator lights red and the AV Speaker Bar switches to standby mode.
3. CONNECT indicator  
   Lights blue when pairing of the AV Speaker Bar and wireless subwoofer is complete.
4. AC IN terminal  
   Connect this first.
Chapter 2
Connecting

Before connecting the unit or changing the connections, be sure to turn off the power and disconnect the power cord from the outlet. Also, make sure you have finished connecting all of the power cords before connecting to the wall outlet.

Installing the AV Speaker Bar

Attaching the Height Adjustment Feet
If you wish to adjust the height of the AV Speaker Bar attach the supplied height adjustment feet.

Caution
- Do not install the AV Speaker Bar in an unstable place such as on an unsteady stand or tilted surface. It may fall off or tip over, resulting in injury.
- The AV Speaker Bar is not magnetically shielded and so should be used away from a cathode ray tube (CRT) TV or monitor. Also, do not place devices that are easily influenced by magnetism (magnetic cards, watches, video tapes, etc.) near the AV Speaker Bar.

Cautions on installing the AV Speaker Bar in front of a TV
If the AV Speaker Bar is connected in front of a TV, the TV may not be able to be operated with the remote control of the TV. In that case, move the AV Speaker Bar away from the TV if possible.
If operation is not possible with the remote control of the TV, set [Initial Setup] → [Option] → [IR Out] to [On] (page 42).

Caution
- Check that the TV cannot be operated with the remote control of the TV before setting [IR Out] to [On]. If it is set to [On] when operation is possible, the signal output directly from the remote control of the TV and the signal output via the unit will interfere with each other.

Mounting the AV Speaker Bar to a Wall
The AV Speaker Bar has mounting holes for attaching it to a wall.

Caution on mounting
The AV Speaker Bar is heavy so there is a risk that its weight could cause the screws to work loose or the wall material to fail to support it, resulting in the AV Speaker Bar falling. Make sure that the wall you intend to mount the AV Speaker Bar to is strong enough to support it. Do not mount the unit to a plywood or soft surface wall.
Mounting screws are not supplied. Use screws suitable for the wall material and capable of supporting the weight of the AV Speaker Bar.
1. Peel off the backing of the double-sided tape on the supplied cushions and attach the cushions aligned to the lines on the rear of the AV Speaker Bar.

![Diagram of the AV Speaker Bar and cushions]

- Peel off the backing from the double-sided tape and then attach the cushions aligned to these lines.

2. Attach the supplied wall mounting template to the wall and then mark the screw positions.

![Diagram of the wall mounting template]

- Tape or drawing pins
- Screw position

3. Obtain commercially available screws that fit the holes on the rear of the AV Speaker Bar.

![Diagram of the AV Speaker Bar rear holes]

- AV Speaker Bar rear holes
- (25 mm)
- 4 mm

4. Screw the screws into the wall.

- Screw in the screws until they are sticking out of the wall by 3 mm to 4 mm.

![Diagram of the screw position and wall mounting screw]

- Wall mounting screw (commercially available)
- 3 mm to 4 mm
- At least 20 mm

- 537 mm

5. Place the wall mounting template on the top of the AV Speaker Bar.

- The marks (left and right) printed on the template serve as a rough guide for the screw positions.
- The AV Speaker Bar will be easy to mount if you use the marks as a rough guide when hanging it on the screws.

![Diagram of the AV Speaker Bar on the template]

- 5 mm
- 10 mm

6. Hang the AV Speaker Bar on the screws by the holes at the rear.

- Align the AV Speaker Bar rear holes and the screws and then hang the AV Speaker Bar on both screws at the same time.

![Diagram of the AV Speaker Bar hanging on the screws]

- Caution

When using a template, make sure there is no slack. If there is any slack when the hole positions are determined, the unit may not be able to be mounted.

- 3 mm to 4 mm

- Caution

- Make sure the unit is firmly secured before letting go of it.
- When the AV Speaker Bar is mounted to a wall, there is a risk of it dropping, falling, etc. due to the weight or mounting method. Take sufficient care not to cause an accident.
- Select a location for installation/mounting with sufficient strength to withstand the weight. If you are unsure of the strength or anything else, consult with a professional.
- Pioneer is not responsible for any accidents or damage that result from improper installation/mounting, incorrect use, modification, disaster, etc.
- Do not hang the unit. Pay special attention to children. The unit may fall and break, resulting in injury.
- Do not connect or disconnect the cables while the unit is mounted to a wall. Install the cables in such a way that a foot or other object cannot get caught in them.
- The screws for mounting to a wall are not supplied. Use screws suitable for the strength and materials of the posts or wall.
- Run the cables down the wall in such a way that a foot cannot be caught on them.
Installing the Wireless Subwoofer (SBX-N700 Only)

Caution

- If sound is not output from the wireless subwoofer, pair the unit with the wireless subwoofer. (page 52)
- Do not mount the subwoofer to a wall or ceiling. It may fall, resulting in injury or the subwoofer being damaged.
- The subwoofer is not magnetically shielded and so should be used away from a cathode ray tube (CRT) TV or monitor. Also, do not place devices that are easily influenced by magnetism (magnetic cards, watches, video tapes, etc.) near the subwoofer.
- Be careful to make sure children do not put their hands or any objects into the subwoofer duct*.
  
  * Subwoofer duct: A hole in the subwoofer cabinet (enclosure) to increase the amount of bass sound.

- Do not stand or sit on the subwoofer. Pay special attention to children. The subwoofer may tip over and break, resulting in injury.
- Do not place an object on the subwoofer. The subwoofer may become imbalanced and fall over or the object may fall resulting in injury.

Note

- Sound may become intermittent or stop being output due to the signal state during use but this is not an indication of a malfunction. Try changing the position or orientation of the AV Speaker Bar or wireless subwoofer.

- The AV Speaker Bar and wireless subwoofer can be used at a distance of up to approximately 10 m from each other. This distance differs depending on the operating environment and operation at the distance of 10 m is not guaranteed.

- The reception state may become unstable if the AV Speaker Bar and wireless subwoofer are too close to each other. In such a case, use the AV Speaker Bar and wireless subwoofer at least 1 m apart from each other.

- If there is an obstruction (metal door, concrete wall, insulation with aluminum foil, etc.) between the AV Speaker Bar and wireless subwoofer, the signal may be blocked and sound may not be output. In this case, install the AV Speaker Bar and wireless subwoofer where there is a clear line of sight between them.

- The audio from the wireless subwoofer may sound out of sync depending on the positional relationship between the listening point, AV Speaker Bar, and wireless subwoofer. In that case, adjust the settings to match your environment from [Speaker Setup] in the unit settings. (page 50)
Connecting to Your TV

Connect the unit to your TV using an HDMI cable (commercially available).

ARC (Audio Return Channel): This is a function that enables output of the TV audio from the speakers of the unit by connecting only the HDMI cable.

When connecting to a TV that is not ARC compatible, you will be unable to hear the TV audio from the unit if the HDMI cable only is connected to the TV. To enable hearing of the TV audio with the unit, connect the supplied optical digital audio cable.

- Connecting the unit with an HDMI cable to Pioneer TVs that support the Control with HDMI function or enables linked operation with these devices. For details, see “Control with HDMI function” (page 44).

1. Connect the HDMI output terminal on the unit to the HDMI input terminal.
   The connection method differs depending on whether your TV is ARC compatible.
   - If your TV is ARC compatible, you can connect using the HDMI cable only. Connect the cable to the ARC compatible HDMI input terminal on your TV (the HDMI terminal indicated by “ARC”).
   - If your TV is not ARC compatible, an optical digital cable must also be connected in addition to the HDMI cable.

The settings of the unit need to be changed depending on the connection between your TV and the unit. For details, see “Setting the Control with HDMI function” on page 44.

**Note**

- Set the input mode of the TV to the HDMI with the unit connected (for the setting procedure, see the operating instructions for your TV).
Connections with external device

PORTABLE IN connection

You can enjoy the sound from your portable audio player through the speakers of this system.

Connect the headphones (or line out) terminal of the portable audio player into the PORTABLE IN socket of this unit. To listen to the sound of a device connected to PORTABLE IN, press PORTABLE on the remote control.

Caution

- When inserting the PORTABLE IN terminal, support the top of the unit with your hand to prevent it from moving.

Note

- An optical digital audio cable with a square plug can be connected to this unit.
- Some connected devices have settings for digital audio output. For details, see the operating instructions for the specific playback device.
- When an MPEG2-AAC (digital broadcast) signal is input to an optical digital audio input terminal, sound may not be output. If sound is not output, switch the audio output of the device connected to the optical digital audio input terminal to PCM. For the switching procedure, refer to the operating instructions for the connected device.
Connecting to your Home Network

This unit can be connected to a local area network (LAN) via the LAN port on the rear panel or the internal wireless module.

**Wired network connection**

Using a wired network provides the best performance, because the attached devices connect directly to the network and are not subject to radio frequency interference. Please refer to the documentation for your network device for further instructions.

Connect the unit’s LAN port to the corresponding port on your Modem or Router using a commercially available LAN or Ethernet cable.

**Note**

- To connect to the Internet, a separate subscription with an Internet service provider is required.
- When plugging or unplugging the LAN cable, hold the plug portion of the cable. When unplugging, do not pull on the LAN cable but unplug while pressing down on the lock.
- Do not connect a modular phone cable to the LAN port.
- Since there are various connection configurations, please follow the specifications of your telecommunication carrier or internet service provider.
- If you want to access content from computers or DLNA servers, this unit must be connected to the same local area network with them via a router.
Connecting

**Wireless network connection**

Another connection option is to use an Access Point or a wireless router. The network configuration and connection method may vary depending on the equipment in use and the network environment.

This unit is equipped with an IEEE 802.11n (Dual band, 2.4 GHz/5 GHz band) wireless module, which also supports the 802.11a/b/g standards. For the best wireless performance, we recommend using a IEEE 802.11n certified Wi-Fi network (access point or wireless router).

Wireless Communication

Computer and/or DLNA certified server

Access Point or Wireless Router

Broadband service

Refer to the setup instructions supplied with your access point or wireless router for detailed connection steps and network settings.

For best performance, a direct wired connection from this unit to your home network’s router or cable/DSL modem is always the best option. If you do chose to use the wireless option, note that performance can sometimes be affected by other electronic devices in the home.

**Wireless network setup**

For the wireless network connection, the unit needs to be set up for network communication. This adjustment can be done from the [Initial Setup] menu. Adjust the [NETWORK] setting as follow. Setting up the access point or the wireless router is required before connecting the unit to the network.

**Preparation**

Before setting the wireless network, you need to:

- connect the broadband internet to the wireless home network.
- set the access point or wireless router.
- note the SSID and security code of the network.

1. Press SETUP. The Initial Setup screen is displayed. Select [Network] → [Interface] → [Wireless] and press ENTER.
2. Select [Network] → [Wireless Setting] → [Next Screen] and press ENTER.
3. Select [Yes] and press ENTER to continue. The new connection settings reset the current network settings.
4. [Wireless Setting] menu is displayed. Use ▲/▼ to select [Scan].
5. Then select [Next] using the ◀/▶ and press ENTER.
6. The unit scans the all available access points or wireless routers within range and display them as a list. Use ▲/▼ to select an access point or wireless router on the list, and then press ENTER.

If you have security on your access point or wireless router, verify that the WEP or WPA key that was entered into the unit matches the router’s information exactly. You need to input the security code as necessary.
How to enter the security code

1. Select the security code section using ▲/▼/◄/► and press ENTER to start the software keyboard.
2. Use ▲/▼/◄/► to select characters and items, and then press ENTER to input.
3. Select [abc], [ABC], or [@#$] using ▲/▼/◄/► to switch to lower case characters, upper case characters, or symbols.
4. Finish entering the security code by selecting [Enter] using ▲/▼/◄/► and pressing ENTER.

7. Select [Next] using ▲/▼/◄/► and press ENTER. If it connects success, it will display connection success and IP is obtained.

8. Pressing ENTER ends [Wireless Setting].

Note
- WEP security mode generally have 4 keys available on an access point or wireless router’s setting. If your access point or wireless router use WEP security, enter the security code of the key “No.1” to connect on your home network.
- An Access Point is a device that allows you to connect to your home network wirelessly.

[Scan] – The unit scans the all available access points or wireless routers within range and display them as a list.

[Manual] – Your access point may not be broadcasting its access point name (SSID). Check your router settings through your computer and either set your router to broadcast SSID, or manually enter the access point name (SSID) in [Manual].

[Auto] – If your access point or wireless router that supports the Push Button Configuration method, select this option and press Push Button on your access point or wireless router within 120 counts. You do not need to know the access point name (SSID) and security code of your access point or wireless router.

Note
- If there is no DHCP server on the network and you want to set the IP address manually, Please refer to “Setting the IP address”. (page 50)
WPS setup (Wi-Fi Protected Setup)

WPS connection setting
WPS is abbreviation of Wi-Fi Protected Setup. A standard established by the Wi-Fi Alliance industry group for a function allowing settings related to interconnection of WPS compatible wireless LAN devices and encryption to be made with simple operations.

This unit supports push-button configuration and PIN code configuration.

PBC (Push Button Configuration)
Connection settings are made automatically simply by pressing the WPS buttons on the WPS compatible wireless LAN device. This is the simplest way of making the settings, and is possible when the WPS compatible wireless LAN device is equipped with WPS button.

PIN Input
Connection settings are made by inputting the 8-digit PIN code shown on the main display to the access point to which you selected. Follow the instructions shown in Connecting using PIN code configuration on the right.

When performing wireless settings set [Initial Setup] → [Network] → [Interface] to [Wireless].

1. Press SETUP.
The Initial Setup screen is displayed.

2. Select [Network] → [Wireless Setting] → [Next Screen] and press ENTER.
A confirmation screen is displayed.

3. Use ◄/► to select [Yes], then press ENTER.
The Wireless Setting screen is displayed.

4. Use ▲/▼ to select [Auto], then press ENTER.
The WPS (Wi-Fi Protected Setup) screen is displayed.

5. Use ▲/▼ to switch between [PBC] or [PIN] screens.
When connecting using PBC go to step 6.
When connecting using PIN go to step 7.

6. When connecting using PBC (Push Button), on the [PBC] screen use ◄/► to select NEXT, then press ENTER.
Then press the WPS button on the access point within 120 seconds. If it connects success, it will display connection success and IP is obtained. Go to step 9.

7. When connecting using PIN confirm the PIN Code on the [PIN] screen. Use cursor ◄/► to select [NEXT], then press ENTER.

8. Enter into the access point the PIN Code that you confirmed in step 7 above.
The PIN Code input method differs depending on the LAN device used. For details, consult the operating instructions accompanying your LAN device. If it connects success, it will display connection success and IP is obtained. Go to step 9.

Notes on Network Connection:

• Many network connection problems during set up can often be fixed by re-setting the router or modem. After connecting the unit to the home network, quickly power off and/or disconnect the power cord of the home network router or cable modem. Then power on and/or connect the power cord again.

• Depending on the internet service provider (ISP), the number of devices that can receive internet service may be limited by the applicable terms of service. For details, contact your ISP.

• Our company is not responsible for any malfunction of the unit and/or the internet connection feature due to communication errors/malfunctions associated with your broadband internet connection, or other connected equipment.

• Some internet contents may require a higher bandwidth connection.

• Even if the unit is properly connected and configured, some internet contents may not operate properly because of internet congestion, the quality or bandwidth of your internet service, or problems at the provider of the content.

• Some internet connection operations may not be possible due to certain restrictions set by the Internet service provider (ISP) supplying your broadband Internet connection.

• Any fees charged by an ISP including, without limitation, connection charges are your responsibility.

• A 10 Base-T or 100 Base-TX LAN port is required for wired connection to this unit. If your internet service does not allow for such a connection, you will not be able to connect the unit.

• You must use a Router to use xDSL service.

• xDSL modem is required to use xDSL service and a cable modem is required to use cable modem service. Depending on the access method of and subscriber agreement with your ISP, you may not be able to use the internet connection feature contained in this unit or you may be limited to the number of devices you can connect at the same time. (If your ISP limits subscription to one device, this unit may not be allowed to connect when a computer is already connected.)

• The use of a “Router” may not be allowed or its usage may be limited depending on the policies and restrictions of your ISP. For details, contact your ISP directly.

• The wireless network operate at 2.4 GHz radio frequencies that are also used by other household devices such as cordless telephone, microwave oven, and can be affected by interference from them.

• Turn off all unused network equipment in your local home network. Some devices may generate network traffic.

• For the purpose of the better transmission, placing the unit from the access point as close as possible.

• In some instances, placing the access point or wireless router at least 0.45 m above the floor may improve the reception.

• Move closer to the access point if possible or re-orient the unit so there is nothing between it and the access point.

• The reception quality over wireless depends on many factors such as type of the access point, distance between the unit and access point, and the location of the unit.

• Set your access point or wireless router to Infrastructure mode. Ad-hoc mode is not supported.
USB device connection

You can play movies, music, and photos stored on a USB device connected to this unit.

About USB devices

The USB devices that can be connected to the unit are as shown below.

- USB 2.0-compatible USB flash drive (capacity of 1 GB or greater, 2 GB or greater recommended) or HDD (capacity 2 TB or less)
- File system: FAT16, FAT32 or NTFS

Note

- Devices formatted with a file system other than the above cannot be used.
- USB devices may not be recognized if they contain multiple partitions.
- Some USB devices may not operate with this unit.
- Operation of USB devices is not guaranteed.

Connecting the USB device

Caution

- Be sure to turn the unit’s power off before connecting or disconnecting USB devices.
- When using an external hard disk as the external storage device, be sure to turn off the hard disk’s power before turning on the unit’s power.
- If the USB device is write-protected, be sure to disable the write-protection.
- When connecting the USB cable, hold onto the plug, set the plug in the proper direction for the port and insert it horizontally.
- Placing excessive loads on the plug may result in poor contact, making it impossible to write data on the USB device.
- When a USB device is connected and the unit’s power is turned on, do not unplug the power cord.

This unit can play movie, music and photo files contained in the USB device.

1. Insert a USB device to the USB port terminal until it fits into place.

Front of the unit

Caution

- When inserting the USB terminal, support the top of the unit with your hand to prevent it from moving.

Note

- This unit does not support a USB hub.
- Use a USB cable with a length of 2 meters or less.
Chapter 3
Basic operations

Outputting the TV Sound from the Unit

The following describes the procedure up until listening to the sound of a TV connected to the unit.

**Caution**

- When the unit is connected to an ARC compatible TV, press **SETUP** to display [Initial Setup] and then set [HDMI → Control] to [On] and [HDMI → TV Input] to [TV(ARC)].
- When a TV that is not compatible with ARC is connected to the optical digital audio input 1 terminal of the unit with an optical digital audio cable (supplied), press **SETUP** to display [Initial Setup] and then set [HDMI → TV Input] to [Optical IN-1].
- The video signal output of the unit is set to 50 fps (“PAL”) in the factory default state. You can change the video signal output to 60 fps (“NTSC”) to match your TV. If the video of the unit is not displayed because the video signal system differs, perform the following operation to change the setting.
  1. Hold down **SLEEP** on the remote control until “PAL” (or “NTSC”) appears in the display window of the AV Speaker Bar.
  2. When “PAL” (or “NTSC”) appears, press ▼ or ► on the remote control to change the setting.
  3. Check that the video of the unit is displayed on the TV.
     - If the settings of the unit are initialized to the factory default state, this setting returns to 50 fps (“PAL”).
     - This function is for ASEAN model only.

1. Turn on the power of the TV.
2. Press ◀ ◁ STANDBY/ON to turn on the power of the unit.
3. Press TV on the remote control to switch the input of the unit to the TV.
4. Select the channel you want to watch on the TV.
5. Press VOLUME and SUBWOOFER VOL to adjust the volume.
   - To temporarily mute the sound, press MUTE. Press the button again or adjust the volume to cancel mute.

Playback Files on a USB Device

1. Turn on the power of the TV.
2. Press ◀ ◁ STANDBY/ON to turn on the power of the unit.
3. Press USB.
4. Select [Photo], [Music], [Video], or [AVCHD].
   Use ▲▼ to select an item and then press ENTER.
5. Select a file and then play it.
   Use ▲▼ to select a file and then press ENTER.
   - To pause playback, press ■ PAUSE during playback.
   - To stop playback, press ■ STOP during playback.
   - If the file you want to play is in a folder, select that folder and then press ENTER to display the files in the folder.

Playback from Media Server

About Media Server

A media server allows you to view a list of folders and files stored on devices on the network that are connected to the unit via the LAN (Media Server). The following shows the devices for which playback is possible from Media Server. Also refer to page 9.

**Devices for which playback is possible**

- Devices on the network that are connected to the unit via the LAN (devices with a media server function compliant with DLNA 1.0 or DLNA 1.5)

**Note**

- Playback may not be possible in some cases even for files in formats supported by the unit.
About Files on the Network

The input sources that can be played from Media Server are as shown below.

- Files on the network servers (on the computers or components connected to the unit via LAN interface.)

Note

- The Media Server allows you to play files on media servers connected to the same Local Area Network (LAN) as the unit.
- The following files are allowed to be played from Media Server:
  - Computers running Microsoft Windows Vista or XP with Windows Media Player 11 installed
  - Computers running Microsoft Windows 7 with Windows Media Player 12 installed
  - DLNA-compatible digital media server (on computers or other components)
- Files stored in a computer or DMS (Digital Media Server) as described above can be played by Digital Media Player (DMP). The unit supports the use of such DMP.
- Files stored in a computer or DMS (Digital Media Server) as described above can be played via command from an external Digital Media Controller (DMC). Devices controlled by this DMC to play files are called DMRs (Digital Media Renderers). This unit supports this DMR function. The user-friendly name of the unit is SBX-N500/N700. When in the DMR mode, such operations as playing and stopping files can be performed from the external controller.
- To play back audio files stored on components on the network, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back files stored on components on the network. See page 50.

About network playback

The network playback function of this unit uses the following technologies:

- **Windows Media Player**
  See Windows Media Player 11/Windows Media Player 12 above for more on this.

- **DLNA**
  
  DLNA CERTIFIED® Audio Player
  
  The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

  The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.5. When a computer running DLNA server software or a DLNA compatible device is connected to this unit, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

  DLNA®, the DLNA Logo and DLNA CERTIFIED® are trademarks, service marks, or certification marks of the Digital Living Network Alliance.
Content playable over a network
- Even when encoded in a compatible format, some files may not play correctly.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit. For more information check with the manufacturer of your server.

Disclaimer for Third Party Content
Access to content provided by third parties requires a high speed Internet connection and may also require account registration and a paid subscription.
Third party content services may be changed, suspended, interrupted, or discontinued at any time without notice, and Pioneer disclaims any liability in connection with such occurrences.
Pioneer does not represent or warrant that content services will continue to be provided or available for a particular period of time, and any such warranty, express or implied, is disclaimed.

About playback behavior over a network
- Playback may stall when the computer is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 10BASE-T/100BASE-TX connection between the unit and the computer is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected computer and the setting of such software, network connection may be blocked.
Pioneer is not responsible for any malfunction of the unit and/or the Media Server features due to communication errors/malfunctions associated with your network connection and/or your computer, or other connected equipment. Please contact your computer manufacturer or Internet service provider.

Windows Media is either a registered trademark or trademark of Microsoft Corporation in the United States and/or other countries.
This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc.
Microsoft, Windows and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

Playback files on the network
1. Turn on the power of the TV.
2. Press STANDBY/ON to turn on the power of the unit.
3. Press MEDIA SERVER to display the Media Server.
4. Select the server which contains the file you want to play.
5. Select from [Photo]/[Music]/[Video]. Use ▲▼ to select, then press ENTER.
6. Select the file you want to play. Use ▲▼ to select, then press ENTER.

Note
- If you are unable to display the servers on the Media Server screen, select [DLNA Search] and press ENTER.
Playing Files on a USB Device or Media Server

Forward and reverse scanning

- During playback, press ◄◄REV or ►►FWD.
  - The scanning speed switches each time the button is pressed. The speed steps depend on the file (the speed is displayed on the TV screen).

- To resume normal playback
  - Press ► PLAY.

Skipping content

- During playback, press ◄◄ or ►►/.
  - When ►► is pressed, the playback skips ahead to the beginning of the next chapter/file.
  - When ◄◄ is pressed while a video or audio file is playing, the playback skips back to the beginning of the currently playing chapter/file. Press twice to skip back to the beginning of the previous chapter/file.
  - When ◄◄ is pressed while an image file is playing, playback returns to the previous file.

Playing in slow motion

- While playback is paused, press ◄◄/◄◄ or ►►/►►.
  - The speed switches each time the button is pressed (the speed is displayed on the TV screen).

- To resume normal playback
  - Press ► PLAY.

Playback functions

The functions that can be used differ according to the type of file. In some cases, some of the functions cannot be used. Check the usable functions on the table below.

<table>
<thead>
<tr>
<th>Function</th>
<th>File type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Forward and reverse scanning</td>

</table>

1. Some functions may not work for some files, even if indicated [✔] on the table.
2. For some files, normal playback resumes automatically when the chapter switches.
3. No sound is produced during forward and reverse scanning.
4. Sound is produced during forward and reverse scanning.
5. No sound is output during slow motion playback.
6. Reverse slow motion playback is not possible.
7. Reverse step playback is not possible.
Using the TOOLS menu

Various functions can be called out according to the unit’s operating status.

1. Display the TOOLS menu.
   Press TOOL during playback.

2. Select and set the item.
   Use ▲▼ to select, then press ENTER.

   Note
   • Items that cannot be changed are displayed in gray. The items that can be selected depend on the unit’s status.

   ➤ To change the setting of the selected item
   Use ▲▼ to change.

   ➤ To close the TOOLS menu
   Press TOOL.

   ➤ TOOLS menu item list

Playing repeatedly (Repeat Play)

Use this procedure to play the currently playing chapter or file repeatedly.

1. To switch to this mode, select [Repeat] from the TOOLS menu during playback. Select either [Repeat One] or [Repeat All].

   ➤ To cancel Repeat Play
   Select [Repeat] from the TOOLS menu, and set to [Repeat Off].

   Note
   • Repeat Play is canceled in the following cases:
     – When you search outside the repeat range.
     – When you start other Repeat Play or Random Play.

Playing a selected section repeatedly (A-B Repeat)

A selected section within a file is played back repeatedly.

1. Press TOOL during playback.
   The TOOLS menu screen appears.

2. Select [A-B Repeat] in the TOOLS menu at the point where A-B repeat playback will start, and press ENTER. [A-] is displayed on the TV screen.

3. Select [A-B Repeat] in the TOOLS menu at the point where A-B repeat playback will end, and press ENTER. [A-B] is displayed on the TV screen, and A-B repeat playback is started.

   ➤ To cancel A-B Repeat play
   Select [A-B Repeat] in the TOOLS menu during A-B repeat playback, and press ENTER.

   • A-B repeat playback is canceled during the following operations.
     – When you search outside the repeat range
     – When you start another repeat or random playback
Playing specified range of chapter (file) in random order
You can select from 2 types of random playback.

1. Select [Mode].
   Use ▲/▼ to select, then press ENTER.
2. Select the playing mode.
   Use ▲/▼ to select, then press ENTER.

- Random play
  The specified range of chapter (file) is played in random order. The same item may be played consecutively.

- Shuffle play
  The specified range of chapter (file) is played in random order. Each item is played once.

Switching the subtitles
For files on which multiple subtitles are recorded, the subtitles can be switched during playback.

1. The subtitles can be switched by selecting [Subtitle] from the TOOLS menu.

- Turning the subtitles off
  Select [Subtitle] from the TOOLS menu to switch the setting to Off.

Switching the audio
For files on which multiple audio streams/channels are recorded, audio streams/channels can be switched during playback.

1. The audio can be switched by selecting [Audio] from the TOOLS menu.

Playing photos as slideshows
This function plays the photos, switching them automatically.

- Rotating/inverting photos
  When a slideshow is playing or paused, the display switches as shown below when the ▲/▼/◄/► are pressed.
  
  - ►: Rotates 90° clockwise
  - ◄: Rotates 90° counterclockwise
  - ▲: Flips vertically
  - ▼: Flips horizontally

- About Slideshow
  A display of the files in the folder switches automatically.

⚠ Note
- Depending on the connected device and its status, it may take some time for playback to start, switching between screens, or for other operations.
- Some files cannot be played back using this function.
- Some files have limitations on their playback count.

Switch Play Mode
Playback range can be selected from within a folder, or within the selected USB device.

1. Press SETUP while stopped.
   The Initial Setup screen is displayed.
2. Select and confirm [Playback] → [Play Mode] → [All Play] or [Folder Play].
   Use ▲/▼ to select, then press ENTER.
   - Folder Play: Playback files from the selected folder.
   - All Play: Playback all files on the selected USB device.

⚠ Caution
- When using [All Play], a new file list will be displayed on the unit, regardless of original folder composition, and then played back in the order that they are displayed.
- The order the files are displayed in on the unit’s file list may be different from the original order on your computer.
- Playback will stop once the final file on the file list is played.
- If you want to playback again from the top of the file list use the repeat function (“Playing repeatedly (Repeat Play)” on page 31).
- The maximum number of files that can be displayed is 1000 files.
- The file list may take some time to be displayed when it includes a large number of files.

**Use the unit’s Wi-Fi Direct™/Miracast™ functions**

Wi-Fi Direct and Miracast are functions for connecting your mobile devices to the unit without using a wireless LAN router.

Miracast is a function that allows you to display the videos on a mobile device as is on a large screen TV.

Wi-Fi Direct is a function that allows you to play back photo, music, and video files stored on a mobile device with the unit by installing a DLNA compliant application on your mobile device.

**Note**
- You can only connect one mobile device to the unit at a time with this function. If you want to connect a different mobile device, you will first need to disconnect the one that is currently connected.
- While connected via Wi-Fi Direct or Miracast, you will be unable to use the unit’s internet connection.
- While connected via Wi-Fi Direct, you will be unable to change sound settings.
- If the power to the unit is turned OFF (Standby) then this function will be terminated, and network settings will be returned to what they were before using this function.
- In order to use this function your mobile device must meet Wi-Fi specifications.
- The unit does not support mobile device control using a specialist application.

**Display the Wi-Fi Direct/Miracast mode screen**

1. Turn on the power of the TV.
2. Press STANDBY/ON to turn on the power of the unit.
3. Press Wi-Fi Direct to display the Wi-Fi Direct/Miracast mode screen.
   - Settings to connect the unit and mobile devices will be started from this screen.
   - Closing this screen will terminate the Wi-Fi Direct/Miracast connection.
Connect using mobile device’s Wi-Fi Direct function

You can connect using a Wi-Fi Direct function, if your mobile device has one.
Press Wi-Fi Direct to display the Wi-Fi Direct/Miracast mode screen.

1. Turn on the Wi-Fi Direct setting on your mobile device.
2. Select the device name “DIRECT-xxSB” for the unit appearing on the TV screen from the list displayed on your mobile device.
The “xx” indicates the identification character for the device.

⚠️ Caution
• If the unit’s device name “DIRECT-xxSB” is not displayed on the mobile device or a connection is not possible, resolve the problem by doing one of the following.
  – Press an input selection button, and then press Wi-Fi Direct, and perform the procedure again from the Wi-Fi Direct/Miracast mode screen.
  – Use ◀▶ to select [Refresh], then press ENTER.

⚠️ Note
• Please see the manual for your mobile device for details on how to operate it.
• When connected using the Wi-Fi Direct function of a mobile device, the DLNA application to be used must also be compatible with a Wi-Fi Direct connection.

Connecting by Miracast

You can connect to your mobile device if it has the Miracast function.
Press Wi-Fi Direct to display the Wi-Fi Direct/Miracast mode screen.

1. Turn on the Miracast setting on your mobile device.
A list of the devices that can be connected to the mobile device is displayed on the mobile device screen.
2. Select the device name “DIRECT-xxSB” for the unit appearing on the TV screen from the list displayed on your mobile device.
The “xx” indicates the identification character for the device.

⚠️ Caution
• If the unit’s device name “DIRECT-xxSB” is not displayed on the mobile device or a connection is not possible, resolve the problem by doing one of the following.
  – Press an input selection button, and then press Wi-Fi Direct, and perform the procedure again from the Wi-Fi Direct/Miracast mode screen.
  – Use ◀▶ to select [Refresh], then press ENTER.

⚠️ Note
• Please see the manual for your mobile device for details on how to operate it.

Playback photos, music and video files from a mobile device

Send photos, music and video files from a mobile device to the unit.

⚠️ Note
• Please see the manual for your mobile device for details on how to operate it.
• Depending on the mobile device you are using, you may need to first install software before you can send photos, music and video files.
Connect to device not compatible with Wi-Fi Direct/Miracast

Press **Wi-Fi Direct** to display the Wi-Fi Direct/Miracast mode screen, and select [Next].

1. **Under the “Wi-Fi Network Settings” on your mobile device,** select the device name “DIRECT-xxSB” for this unit as displayed on the TV screen. The “xx” shown here stands for the unit’s identification code.

   **Caution**
   - If the name of the unit “DIRECT-xxSB” does not appear on your mobile device, press an input selection button on the remote control and then **Wi-Fi Direct** and perform the controls again from the Wi-Fi Direct/Miracast Mode Screen.

2. **Enter the password for the unit as shown on the TV screen into your mobile device.** The connection is then complete.

   **Note**
   - Please see the manual for your mobile device for details on how to operate it.

Connect using WPS (Wi-Fi Protected Setup)

You can connect using WPS if your mobile device supports it.

Press **Wi-Fi Direct** to display the Wi-Fi Direct/Miracast mode screen, and select [Next].

1. **Use */* to select [WPS], then press ENTER.**
   The WPS (Push Button Configuration) screen will be displayed.

2. **Use */* to select [Next], then press ENTER.**

3. **Turn on the WPS setting on your mobile device within 2 minutes.**
   If the connection is successful then [Connection Success] will be displayed on the TV screen.

   **Note**
   - Please see the manual for your mobile device for details on how to operate it.
Change SSID and password

Change the SSID and password used to connect the unit and a mobile device.

1. Press \STANDBY/ON and the power to the unit will come on.
2. Press Wi-Fi Direct to display the Wi-Fi Direct/Miracast mode screen.
3. Use ◄/◢ to select [Refresh], then press ENTER.
SSID and password will be changed. The connection between the unit and mobile device will be terminated. After the connection is terminated, when using the unit’s Wi-Fi Direct/Miracast function again you will also need to set up the connection again.

Caution
• All connection settings that have been setup for mobile devices will be removed.
• The SSID and password will not change until an update (Refresh) is performed. You should periodically perform an update (Refresh) for security reasons.

Enjoying YouTube

About YouTube
• This unit supports the YouTube Leanback service. The YouTube Leanback service is only available in English for now.
• YouTube videos for mobile phones cannot be played.
• Some YouTube videos cannot be played.

Caution
You must connect the unit to the Internet beforehand. See Connecting to your Home Network on page 21 for the details.

1. Display YouTube screen.
   Press YouTube.

2. Select video and playback.
   Use ◄/◢/◄/ ► to select, then press ENTER.
   Press ◄ STOP to stop playback. Playback of image will stop.

Note
• Depending on the Internet connection environment, it may not be possible to play web contents properly.
• To access to web contents, this unit requires a broadband Internet connection. A contract with an Internet provider is required for a broadband Internet connection.
• Access to content provided by third parties requires a high speed Internet connection and may also require account registration and a paid subscription. Third party content services may be changed, suspended, interrupted, or discontinued at any time without notice, and Pioneer disclaims any liability in connection with such occurrences. Pioneer does not represent or warrant that content services will continue to be provided or available for a particular period of time, and any such warranty, express or implied, is disclaimed.
Enjoying music on Bluetooth® devices

Enjoy listening to music wirelessly from a Bluetooth device

- Bluetooth devices: Mobile phone
- Bluetooth devices: Digital music player
- Devices without Bluetooth function: Digital music player + Bluetooth audio transmitter (commercially available). The Bluetooth wireless technology enabled device must support A2DP profiles.

Pairing the unit and the Bluetooth device (initial registration)
Before starting the pairing operation, check that the Bluetooth function on the Bluetooth device is turned on. For details, see the operating instructions for your Bluetooth device. Once the pairing operation is performed, it does not need to be performed again.

1. Press BT AUDIO.
   First, “BT AUDIO” appears in the display window of the unit and then “READY” is displayed.

2. Perform the pairing operation on the Bluetooth device.
   When searching for the unit from the Bluetooth device, some types of Bluetooth devices may show a list of compatible devices on the display of the Bluetooth device. The unit name displayed for pairing is SBX-N500/N700.

3. Enter the PIN code.
   The PIN code that can be set for the unit is 0000, 1234, or 8888 (the default setting is 0000).
   If the pairing between the unit and the Bluetooth device is successful, “SINK” appears in the display window of the unit.

Note
- The pairing method may vary depending on the type of Bluetooth device.

4. Play music using your Bluetooth device
   For details on the playback procedure, see the operating instructions for your Bluetooth device.
   The following operations can be performed using the remote control of the unit.

<table>
<thead>
<tr>
<th>Button</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>PLAY</td>
<td>Starts playback.</td>
</tr>
<tr>
<td>PAUSE</td>
<td>Pauses playback.</td>
</tr>
<tr>
<td>STOP</td>
<td>Stops playback.</td>
</tr>
<tr>
<td>PREV</td>
<td>Moves to the start of the file. Pressing twice moves to the start of the previous file.</td>
</tr>
<tr>
<td>NEXT</td>
<td>Moves to the start of the next file.</td>
</tr>
<tr>
<td></td>
<td>The file rewinds while this button is pressed.</td>
</tr>
<tr>
<td></td>
<td>The file fast-forwards while this button is pressed.</td>
</tr>
</tbody>
</table>

- To perform operation using the remote control of the unit, the Bluetooth device must support the Profile: AVRCP.
- Operations performed by Bluetooth devices may vary for different devices.
- Remote control operation cannot be guaranteed for all Bluetooth devices.

Note
- When a Bluetooth connection is not established, the display window of the unit shows “READY”.

Powering on the unit with the Bluetooth device

If you set Bluetooth Standby Mode to On, you can connect from a paired Bluetooth device when the unit is in standby mode.

When the connection is complete, the unit will power on automatically and enter the state for listening to the music on the Bluetooth device.

How to turn on Bluetooth Standby Mode

1. Press SETUP.
   The SETUP screen is displayed.
2. Set [Bluetooth] → [Bluetooth Standby Mode] to [On].

Listening to Sound Played by the Unit with a Bluetooth Receiver (BT Transmitter)

You can listen to the sound played by the unit with a Bluetooth receiver (speakers or headphones).

Bluetooth devices: Bluetooth speaker
Bluetooth devices: Bluetooth headphone
Devices without Bluetooth function: Speaker + Bluetooth audio receiver (commercially available)

The Bluetooth wireless technology enabled device must support A2DP profiles.

Pairing the unit and the Bluetooth device (initial registration)

When connecting with a Bluetooth receiver, register the device by pairing. The pairing information of only one device can be registered. If you want to connect with another device, register by pairing again.

1. Press SETUP.
   The Initial Setup screen is displayed.
2. Set [Bluetooth] → [BT Transmitter] to [On].
   BT TRANSMITTER Indicator flashes.
3. Select [Bluetooth] → [Bluetooth Device Search] → [Next Screen].
4. Set the Bluetooth device to pairing mode.
   For how to set pairing mode, see the operating instructions for your Bluetooth device.
5. Select [Search] and press ENTER.
   A list of the found devices is displayed. If the search operation does not complete after at least 1 minute, press [Cancel] and check whether the Bluetooth device is in pairing mode. Then perform the operation again.
6. Select the Bluetooth device to pair and press ENTER.
7. When the connection is completed, the BT TRANSMITTER Indicator lights.
   This completes the pairing procedure.
Listening to the audio of the unit with a Bluetooth receiver

1. **Switch a paired Bluetooth receiver to the connection standby state.**
   For how to switch to the connection standby state, see the operating instructions for your Bluetooth device.

2. **Turn the power of the unit on.**
   The unit connects to the Bluetooth receiver automatically and the audio of the unit is played from the Bluetooth receiver. However, if BT Audio is selected, you will not be able to listen to sound with the Bluetooth receiver.

   **Note**
   - Control the volume and sound quality of the unit and the Bluetooth receiver from each of the devices.
   - The audio played from the Bluetooth receiver will have a delay when compared to the audio from the unit.

Disabling the BT Transmitter function

1. **Press SETUP.**
   The Initial Setup screen is displayed.

2. **Set [Bluetooth] → [BT Transmitter] to [Off].**

   **Note**
   - The unit does not support the Mono Headset Profile (Hands Free Profile).
   - Only one Bluetooth device can be connected to the unit at one time. Connection with multiple devices is not possible.
   - The Bluetooth function may not be available for certain Bluetooth device types.
   - The audio may sound choppy if signals from other devices interfere with the connection.
   - The Bluetooth connection will be lost if a malfunction occurs due to the effect of a device that operates in the same frequency, such as a medical device, microwave, or wireless LAN device.
   - Even if the unit is within 10 meters of the Bluetooth device, a connection may not be established if objects are in between.
   - If communication is cut off because of objects between the Bluetooth device and the unit, the Bluetooth connection will be lost.
   - Large distances between the Bluetooth device and the unit will result in poorer sound quality, and the connection will be cut off if the distance between the Bluetooth device and the unit exceeds the operating range.
   - The connection with the Bluetooth device will be cut off when the power for the unit is turned off or when the distance from the Bluetooth device exceeds 10 meters.
**Sound**

Press **SOUND MENU** on the remote control to display the sound select menu on the TV screen. Use ▲▼◄► to make a selection, then press **ENTER**.

Press **SOUND MENU** to exit the Sound Menu.

⚠ **Note**
- When YouTube is selected, the Sound menu cannot be displayed. Switch to other input source and then switch SOUND.
- When file is stopped, the Sound menu cannot be displayed. Switch SOUND when file is being played.
- In Options, the factory default settings are indicated in bold.

<table>
<thead>
<tr>

</table>
PHASE CONTROL technology

The unit uses PHASE CONTROL technology. During multi-channel playback in a typical home theater, the LFE (Low Frequency Effects) signals and low-pitched components contained in various channels are routed to the subwoofer or other optimum speaker. However, in principle, this routing process results in a frequency where the phase is shifted (group delay), leading to problems where the low-frequency sounds only arrive delayed or low-pitched sounds cancel each other out due to interference with other channels. The PHASE CONTROL technology in the unit is used to recreate powerful low-pitched sounds that are faithful to the original sounds.

The phase indicates the time relationship between two sound waves. Two sound waves are said to be “in phase” if their peaks match up with each other, and the phases are said to be “out of phase” if their peaks do not match up.

When the PHASE CONTROL technology is used, it can provide the following effects when the sound source is played back.

**No PHASE CONTROL technology**
- Front speaker
- Listening position
- Subwoofer
- Sound source
- Timing is delayed, and sounds cancel each other out
- Rhythm is out of phase and unclear
- Poor quality of low-pitched sounds
- Musical instruments have an unrealistic sound

**With PHASE CONTROL technology**
- Front speaker
- Listening position
- Subwoofer
- Sound source
- Original sound tone can be heard
- Clear rhythm
- Low-pitched sounds keep their quality
- Musical instruments have a realistic sound

**Note**
- If the speaker distance is not set correctly, the proper effect of the PHASE CONTROL technology will not be obtained.
- The PHASE CONTROL technology is always activated.

PHASE CONTROL technology is a trademark assigned to products that provide matching of the phase characteristics from recording to playback based on the PHASE CONTROL technology concept developed by Pioneer.
IR Repeater Function

When the TV remote control does not work (when the AV Speaker Bar is installed in front of the TV)

When the AV Speaker Bar is installed in front of the TV, the AV Speaker Bar may block the remote control sensor on the TV so that operation by the TV remote control no longer works. When this happens, try testing if the TV remote control works using the three methods below.

Method 1: Move the position of the AV Speaker Bar forward or backward or to the right or left, or adjust its height
Method 2: Use the IR Repeater function
Method 3: Connect the supplied IR cable

Relaying TV remote control signals (Using the IR repeater function)

Diagram of IR repeater operation

If you cannot control your TV using the TV remote control, the remote control signals can be relayed by the AV Speaker Bar to enable remote control operation. The remote control signals are relayed even when the AV Speaker Bar is turned off.

To use the IR repeater function, select [Initial Setup] → [Options] → set [IR Out] to [On].

Caution

- Check that the TV cannot be operated with the remote control of the TV before setting [IR Out] to [On]. If it is set to [On] when operation is possible, the signal output directly from the remote control of the TV and the signal output via the AV Speaker Bar will interfere with each other.

- If the AV Speaker Bar is installed in a location where the TV remote control sensor is not blocked, be sure to always set to [Off].

- This may not work for certain types of TVs. In this case, try changing the installation location of the AV Speaker Bar.

Connecting the supplied IR cable

The IR repeater function may not work depending on how the AV Speaker Bar is installed and the position of the TV remote control sensor. In this case, use the supplied IR cable.

1. Connect the supplied IR cable.
2. Affix the IR cable to the rear panel of the unit.
   - Position the transmitter so that it is aligned with the TV remote control sensor.
   - Use the TV remote control correctly within the reception range of the remote control sensor of the unit.
   - Peel off the backing, and affix it to the unit.

3. Select [Initial Setup] → [Options] → [IR Out Setting] → [External].
**Note**

- For details about the location of the TV remote control sensor, see the operating instructions for your TV.
- Select an installation location that best matches your usage environment.
- Carefully wipe off any dust or objects at the affixing location.
- This may not work for certain types of TVs. In this case, try changing the installation position of the unit.
Chapter 4
Control with HDMI function

Linked operation is possible by connecting the unit to a TV that supports the Control with HDMI function.

The following linked operations are possible by connecting the unit using an HDMI cable to a TV that supports the Control with HDMI function.

• Theater mode
  Volume adjustment and muting of the unit from the TV

• Linking power with TV

• Automatic input switching
  Automatic input switching of the unit based on switching of the TV input

• Auto select function
  TV automatic input switching based on input switching of the unit

Note
• On certain Pioneer TVs, the Control with HDMI function appears as “KURO LINK”.
• Linked operation cannot be guaranteed for TVs other than Pioneer TVs that support the Control with HDMI function.
• To use the Control with HDMI function, connect a High Speed HDMI®/™ cable. The Control with HDMI function may not work properly with other types of HDMI cables.
• For the specific operation and setup procedures, see also the operating instructions for your TV.

Connecting to a TV that supports the Control with HDMI function

A TV that supports the Control with HDMI function can be connected to the unit for enabling linked operation. Connect using a High Speed HDMI®/™ cable. For the connection procedure, see “Connecting to Your TV” (page 19). When the connection is completed, perform the procedure in “Setting the Control with HDMI function” (page 44).

If your TV supports ARC (Audio Return Channel), audio from the TV can be input to the unit over the HDMI cable. If your TV is not compatible with ARC, set [TV Input] to [Optical IN-1] and connect a separate optical digital audio cable (page 44).

Note
• To ensure maximum performance of the Control with HDMI function of the unit, connect the TV that supports the Control with HDMI function directly to the unit.
• The audio of the unit may be interrupted by operation of the TV or another connected device.

Setting the Control with HDMI function

This shows how to set the Control with HDMI function of the unit. If connecting to a TV that supports the Control with HDMI function and ARC, the settings of the unit do not need to be changed.

• Besides the settings for the unit, settings are also required for the TV supporting the Control with HDMI function that is connected to the unit. For details, see the operating instructions for your TV.

1. Press SETUP while stopped.
   The Initial Setup screen is displayed.

2. Use ▲/▼ to select [HDMI], and press ENTER.
3. Use ▲/▼ to select [Control], and press ENTER.
   • On
     This enables the Control with HDMI function. (Default setting)
   • Off
     This disables the Control with HDMI function and disables linked operation.

4. Use ▲/▼ to select [HDMI Standby Mode], and press ENTER.
   • On
     The Control with HDMI function can be used even when the unit is in standby mode.
   • Off
     The Control with HDMI function cannot be used when the unit is in standby mode. (Default setting)

5. Use ▲/▼ to select [TV Input], and press ENTER.
   • TV(ARC)
     Audio from the TV is input via HDMI. (Default setting)
   • Optical IN-1
     To input audio from the TV, select the input connected to the TV by the optical digital audio cable.

6. Press RETURN to exit.

Operation during linkage

Linked operation is performed as shown below for TVs supporting the Control with HDMI function that are connected to the unit.

• Theater mode
  • If you use the menu screen of your TV with Control with HDMI function to set so that audio is output from the unit, you can set to Theater mode.
  • When Theater mode is set, it is canceled by turning off the unit. Then, when the TV menu screen is used to set so that the audio is output from the unit, the power for the unit is turned on, and Theater mode is activated again. (However, this happens only when HDMI Standby mode is turned on.)
  • When Theater mode is set, if the menu screen of your TV is used to set so that audio is output from the TV, Theater mode will be canceled.

• Linking power with TV
  • When the TV power is set to standby mode, the power for the unit is also set to standby mode.

• Automatic input switching
  • When the input source for the TV is switched, the input source for the unit is also switched at the same time.
  • Linked operation continues even if the input source for the unit is set to a source other than TV.

• Auto select function
  • If USB, Media Server, Wi-Fi Direct, or YouTube of the unit is pressed, the TV input switches automatically, and video from the unit is displayed on the TV.

Notes on Control with HDMI function

• When a TV supporting the Control with HDMI function is connected to the unit and Theater mode is set using the TV remote control, the input source of the unit is switched automatically whenever the TV input source is switched, and audio is output from the unit. During this usage, the audio from the TV is muted. If the TV does not support ARC (Audio Return Channel), connect using an optical digital audio cable (page 19).

• Connect the TV directly to the unit. Malfunctions can occur if the TV is connected to a device other than the unit, such as an amplifier or AV converter (HDMI switch), before connecting to the unit.
Advanced settings

Operating the initial setup screen

1. When playback is stopped, display the Initial Setup screen. Press SETUP.

2. Select the item and change the setting. Use ▲/▼/◄/► to select, then press ENTER.

Closing the Initial Setup screen
Press SETUP or RETURN.

Note
- The items that can be selected depend on the unit’s status.
- In Options, the factory default settings are indicated in bold.

Advanced settings

- **Adjusting the video**
  1. Select and set [Display Setting] → [Video Adjust] → [Custom].
     Use ▲/▼ to select, then press ENTER.
  2. Select the item and change the setting.
     Use ▲/▼ to select the item, then use ▶/◀ to change the setting. Once the setting is completed, press ◄ RETURN to close the settings screen.

<table>

<tr>
<td>Sharpness</td>
<td>Choose the level of sharpness.</td>
</tr>
<tr>
<td>CTI (Color Transient Improvement)</td>
<td>Provides images with clearer color contours.</td>
</tr>
</tbody>
</table>

- **Adjust speaker settings**
  Set the distances from the listening position to the speakers.
  1. Select and set [Audio Output] → [Speaker Setup] → [Next Screen].
  2. Use ▲/▼ to select the speaker you want to set and press ENTER.
  3. Use cursor ▶/◀ to adjust the setting, then press ENTER.

- **Setting the IP address**
  1. Select and set [Network] → [IP Address Setting] → [Next Screen].
     Use ▲/▼ to select, then press ENTER.
  2. Set IP address.
     Use ▲/▼/◄/► to set the IP address of the unit or DNS server, then press ENTER.
     - **Auto Set IP Address**
       - **On** – The unit’s IP address is obtained automatically. Select this when using a broadband router or broadband modem that has a DHCP (Dynamic Host Configuration Protocol) server function. This unit’s IP address will automatically be allocated from the DHCP server.
       - **Off** – The unit’s IP address must be set manually. When configuring the [IP Address], [Subnet Mask], [Default Gateway], and [DNS] settings, press ENTER to launch the software keyboard, use the ▲/▼/◄/► to select a character or item, and press ENTER to input the selection. Select [OK] and press ENTER to apply all of the settings.

- **Note**
  - For information on the DHCP server function, refer to the operating instructions for the network device.
  - You may need to contact your Internet service provider or network administrator when inputting the IP address manually.
**Setting the proxy server**

Only set the proxy server if so instructed by your Internet service provider.

1. Select and set [Network] → [Proxy Server] → [Next Screen].
   Use ▲▼ to select, then press ENTER.
2. Select and set [Use] or [Not use] at [Proxy Server].
   Use ▲▼ to change, then press▼.
   • Use – Select this when using a proxy server.
   • Not use – Select this when not using a proxy server.
   If you have selected [Use], proceed to step 3.
3. Select and set Server Select Method.
   Use ▲▼ to change, then press▼.
   • IP Address – Input the IP address.
   • Server Name – Input the server name.
4. Input [IP Address] or [Server Name].
   If you selected [IP Address] in step 3, press ENTER to launch the software keyboard, use ▲▼◄► to select a number, and press ENTER to input the selection.
   If you selected [Server Name] in step 3, press ENTER to launch the software keyboard, use ▲▼◄► to select a character or item, and press ENTER to input the selection.
5. Input Port Number.
   Use ▼ to select [Port Number] and then press ENTER to launch the software keyboard, use ▲▼◄► to select a number, and press ENTER to input the selection.
6. Select [OK] and press ENTER to apply all of the settings.

**Displaying the network settings**

1. Select and set [Network] → [Information] → [Next Screen].
   Use ▲▼ to select, then press ENTER.
   The MAC address, IP address, subnet mask, default gateway and DNS server (primary and secondary) settings are displayed.
   When [Auto Set IP Address] is set to [On], the values obtained automatically are displayed.

**Testing the network connection**

1. Select and set [Network] → [Connection Test] → [Start].
   Use ▲▼ to select, then press ENTER.
   [Network is OK.] is displayed once the test is completed. If any other message is displayed, check the connections and/or settings (pages 21 and 48).

**Changing to other language at language setting**

1. Select and set Language.
   Use ▲▼ to select, then press ENTER.
2. Select and set [OSD].
   Use ▲▼ to select, then press ENTER.
3. Select and set the desired language.
   Use ▲▼ to select, then press ENTER.

**Registering or Changing the password**

Use this procedure to register or change the code number required for the [Internet Setting] settings.

1. Select and set [Security] → [Change Password] → [Next Screen].
   Use ▲▼ to select, then press ENTER.
2. Input the password.
   Press ENTER to launch the software keyboard, use the ▲▼◄► to select a four digit number, and press ENTER to input the selection. Select [OK] and press ENTER to confirm the password.
   • The default password is “0.0.0.0”.

**Note**

• “0.0.0.0” is displayed when each IP address has not been set.
3. **Re-input the password.**
   Press ENTER to launch the software keyboard, use ▲▼◄► to select a four digit number, and press ENTER to input the selection. Select [OK] and press ENTER to confirm the password.
   - To change the password, input the previously registered password, then input the new password.

   **Note**
   - We recommend making a note of the password.
   - If you have forgotten the password, reset the unit to the factory default setting, then register the password again (page 53).
   - This unit might ask you to enter a password when you change the password.
   - If you reset this unit, your password is simultaneously changed to the default setting.

   **Returning the resolution setting to the default setting**
   If you select a resolution that is not supported by your TV, videos may become unable to be displayed on the TV.
   Return the resolution setting to the default setting.
   1. Press ◁ STANDBY/ON on the unit to turn off the power of the unit.
      Press ◁ STANDBY/ON on the unit again to turn the power on.
   2. Press PORTABLE on the remote control to switch the input of the unit to portable.
   3. Press and hold DISPLAY on the remote control for at least 5 seconds.
      The display window shows [RESOLUTI] .
   4. Press ENTER while [RESOLUTI] is displayed.
      When initialization is completed, [OK] is displayed.
   5. Press ◁ STANDBY/ON on the unit to turn off the power of the unit.

**Paired a wireless subwoofer with the unit (SBX-N700 only)**

When sound is not output from the wireless subwoofer, pair the wireless subwoofer with the unit.

Furthermore, sound may no longer be output after you update the software of the unit or restore the settings of the unit to the default settings. In that case as well, perform pairing.

1. **Press ◁ STANDBY/ON on the unit to turn off the power of the unit.**
   Press ◁ STANDBY/ON on the unit again to turn the power on.
2. **Press PORTABLE on the remote control to switch the input of the unit to portable.**
3. **Press and hold RESET on the subwoofer for at least 3 seconds.**
   The STANDBY indicator on the wireless subwoofer flashes red.
4. **Press and hold ▶ PLAY on the remote control for at least 3 seconds.**
   [SW PAIR] is displayed on the unit’s display window and pairing starts.
   Once pairing is completed, [PASSED] is displayed on the unit’s display window and the CONNECT indicator on the wireless subwoofer lights blue.
   If pairing failed, [FAILED] is displayed on the unit’s display window. Repeat steps 1-4.

**Software updating**

The unit’s software can be updated using one of the methods shown below.
- Connecting to the Internet.
- Using a USB flash drive.

Product information on this unit is provided on the Pioneer website. Check the website shown on page 7 for update and service information on your unit.

**Caution**
- Do not unplug the power cord or remove the USB flash drive during software updating. Also, do not reboot by pressing ◁ STANDBY/ON for 5 seconds or longer. Otherwise, the updating will be aborted and malfunction may occur with the unit.
- There are two processes for software updating, downloading and updating. Both processes may take a certain period of time.
- Other operations are defeated during software updating. Furthermore, updating process cannot be canceled.

**Updating connecting to the Internet**

1. **Connect to the Internet.**
2. **When playback is stopped, display the Initial Setup screen.**
Advanced settings

Press SETUP.

3. Select and set [Options] → [Update] → [Network] → Start.
   Use ▲▼◄► to select, then press ENTER.

4. Updating starts.
   Press ENTER.
   • Software updating may take a certain period of time.
   • When updating is completed, the unit restarts automatically.

● Updating using a USB flash drive

⚠️ Note
• When an update file is provided on the Pioneer website, use your computer to download it onto a USB flash drive. Carefully read the instructions on downloading update files provided on the Pioneer website.
• Store the update file in the root directory of the USB flash drive. Do not store it within a folder.
• Do not put any files other than the update file on the USB flash drive.
• The unit supports USB flash drive formatted in FAT32/FAT16/NTFS. When formatting a USB flash drive on your computer, do so with the settings below.
  – File system: FAT32
  – Allocation unit size: Default allocation size
• Only store the most recent update file on the USB flash drive.
• Do not use a USB extension cable to connect a USB flash drive to the unit. Using a USB extension cable may prevent the unit from performing correctly.

1. Plug in the USB flash drive on which the update file is stored.
2. When playback is stopped, display the Initial Setup screen.
   Press SETUP.

3. Select and set [Options] → [Update] → [USB Storage] → Start.
   Use ▲▼◄► to select, then press ENTER.

4. Updating starts.
   Press ENTER.
   • Software updating may take a certain period of time.
   • When updating is completed, the unit restarts automatically.

Restoring all the settings to the factory default settings

1. Check that the unit’s power is turned on.
2. When playback is stopped, display the Initial Setup screen.
   Press SETUP.

3. Select and set [Options] → [Load Default] → [Next Screen].
   Use ▲▼ to select, then press ENTER.

4. Select and set [OK].
   Use ◄► to select, then press ENTER.

5. Press © STANDBY/ON to turn off the power.

6. Press © STANDBY/ON to turn on the power.
Chapter 6  Troubleshooting

Incorrect operation is often mistaken for trouble or malfunction. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Inspect the other components and electrical appliances being used. If the trouble cannot be rectified even after checking the points below, ask your nearest Pioneer authorized service center or your dealer to carry out repair work.

Troubleshooting

Problem: No sound is output from the wireless subwoofer.
(SBX-N700 only)

Check: Is the CONNECT indicator of the wireless subwoofer lit blue?

Remedy: • When the audio signal being played has no bass component, no sound will come from the subwoofer.
• Adjust the settings to match your environment from [Speaker Setup] or [Audio Output]. (page 47)
• Check whether the subwoofer setting of [Initial Setup] on the unit is set to wireless. (page 47)
• Check whether the unit and wireless subwoofer are paired. (page 52)
• Sound may become intermittent or stop being output due to the signal state during use but this is not an indication of a malfunction. Try changing the position or orientation of the AV Speaker Bar or wireless subwoofer.
• The AV Speaker Bar and wireless subwoofer can be used at a distance of up to approximately 10 m from each other. This distance differs depending on the operating environment and operation at the distance of 10 m is not guaranteed.
• The reception state may become unstable if the AV Speaker Bar and wireless subwoofer are too close to each other. In such a case, use the AV Speaker Bar and wireless subwoofer at least 1 m apart from each other.
• If there is an obstruction (metal door, concrete wall, insulation with aluminum foil, etc.) between the AV Speaker Bar and wireless subwoofer, the signal may be blocked and sound may not be output. In this case, install the AV Speaker Bar and wireless subwoofer where there is a clear line of sight between them.

Check: Is the wireless subwoofer installed in the correct position?

Remedy: Check whether there is a problem with the installation position. (page 18)

The audio from the AV Speaker Bar and the audio from the wireless subwoofer sound out of sync.
(SBX-N700 only)

Check: Did you adjust the speaker settings to appropriate settings?

Remedy: Set the distances from the listening position to the speakers. (page 50)

Playback

Problem: Picture freezes and the front panel and remote control buttons stop working.

Check: 

Remedy: • Press STOP to stop playback, then restart playback.
• If the playback cannot be stopped, press STANDBY/ON on the unit’s front panel to turn off the power, then turn the power back on.
• Press STANDBY/ON on the unit for more than 5 seconds. The unit reboots, and the operation becomes possible.

The characters that cannot be displayed on this unit are displayed in ( ).

Control with HDMI function

Problem: Control with HDMI function does not work.

Check: Is the HDMI cable properly connected?

Remedy: To use the Control function, connect the TV to the HDMI OUT terminal (page 19).

Is the HDMI cable you are using a High Speed HDMI™ Cable?

Remedy: Use a High Speed HDMI™ Cable. The Control with HDMI function may not work properly if an HDMI cable other than a High Speed HDMI™ Cable is used.

Does the connected device support the Control with HDMI function?

Remedy: • The Control with HDMI function will not work with devices of other brands that do not support the Control with HDMI function, even when connected using an HDMI cable.
• The Control with HDMI function will not work if devices that do not support the Control with HDMI function are connected between the Control-compatible device and the unit.
• Even when connected to a Pioneer product compatible with the Control with HDMI function, some of the functions may not work. Also refer to the operating instructions for the connected device.
**Troubleshooting**

Maintenance

Handling the unit

When shipping the unit
Please save the original shipping carton and packing materials. If you need to ship the unit, for maximum protection, re-pack the unit as it was originally packed at the factory.

Keeping the exterior surfaces clean
• Do not use volatile liquids such as insecticide spray near the unit.
• Wiping with strong pressure may damage the surface.
• Do not leave rubber or plastic products in contact with the unit for a long period of time.

Cleaning the unit
To clean the unit, use a soft, dry cloth. If the surfaces are extremely dirty, use a soft cloth lightly moistened with a mild detergent solution. Do not use strong solvents such as alcohol, benzine, or thinner, as these might damage the surface of the unit.

Important Information Relating to Network Services

All information, data, documents, communications, downloads, files, text, images, photographs, graphics, videos, webcasts, publications, tools, resources, software, code, programs, applets, widgets, applications, products and other content (“Content”) and all services and offerings (“Services”) provided or made available by or through any third party (each a “Service Provider”) is the sole responsibility of the Service Provider from whom it originated.

The availability of and access to Content and Services furnished by the Service Provider through the PIONEER Device are subject to change at any time, without prior notice, including, but not limited to the suspension, removal or cessation of all or any part of the Content or Services.

Should you have any inquiry or problem related to the Content or Services, you may refer to the Service Provider’s website for the most up-to-date information. PIONEER is neither responsible nor liable for customer service related to the Content and Services. Any question or request for service relating to the Content or Services should be made directly to the respective Content and Service Providers.

Please note that PIONEER is not responsible for any Content or Services provided by the Service Provider or any changes to, removal of, or cessation of such Content or Services and does not warrant or guaranty the availability of or access to such Content or Services.

About SBX-N700

Note
• When submitting the unit for repairs, please submit both the unit and subwoofer because operation of the entire system will need to be checked even in the case of a partial failure.
Appendix 7

**Declaration of Conformity with regard to the R&TTE Directive 1999/5/EC**

**Manufacturer:**
PIONEER CORPORATION
