WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

VENTILATION CAUTION
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 40 cm at top, 10 cm at rear, and 20 cm at each side).

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table-cloths, curtains) or by operating the equipment on thick carpet or a bed.

WARNING
Store small parts out of the reach of children and infants. If accidentally swallowed, contact a doctor immediately.

Operating Environment
Operating environment temperature and humidity:
+5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)
Do not install this unit in a poorly ventilated area, or in locations exposed to high humidity or direct sunlight (or strong artificial light).

CAUTION
The STANDBY/ON switch on this unit will not completely shut off all power from the AC outlet. Since the power cord serves as the main disconnect device for the unit, you will need to unplug it from the AC outlet to shut down all power. Therefore, make sure the unit has been installed so that the power cord can be easily unplugged from the AC outlet in case of an accident. To avoid fire hazard, the power cord should also be unplugged from the AC outlet when left unused for a long period of time (for example, when on vacation).

CAUTION
TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

WARNING
This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.

WARNING
Store small parts out of the reach of children and infants. If accidentally swallowed, contact a doctor immediately.
Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly.

Flow of settings on the receiver

Flow for connecting and setting the receiver

The unit is a full-fledged AV receiver equipped with an abundance of functions and terminals. It can be used easily after following the procedure below to make the connections and settings.

Required setting item: 1, 2, 3, 4, 5, 8, 10
Setting to be made as necessary: 6, 7, 9, 11, 12, 13

Important
Using Wiring Navi on AVNavigator of this receiver, you can make the initial settings of the receiver on your computer or mobile device. In that case, you can use Wiring Navi to make the same connections or settings that are performed in Steps 2, 3, 4, 5, 6, 8, and 9. For details of how to use AVNavigator, refer to How to use the built-in AVNavigator on page 36.

1 Before you start
- Checking what’s in the box on page 9
- Loading the batteries on page 9

2 Determining the speakers’ application (page 18)
- 7.2 channel surround system (Front height)
- 7.2 channel surround system (Front wide)
- 7.2 channel surround system & Speaker B connection
- 5.2 channel surround system & Front Bi-amping connection (High quality surround)
- 5.2 channel surround system & ZONE 2 connection (Multi Zone)
- 5.2 channel surround system & HDZONE connection (Multi Zone)

3 Connecting the speakers
- Placing the speakers on page 20
- Installing your speaker system on page 21
- Bi-amping your speakers on page 21

4 Connecting the components
- About the audio connection on page 22
- About the video converter on page 33
- Connecting your TV and playback components on page 24
- Connecting AM/FM antennas on page 28
- Plugging in the receiver on page 34

5 Power On

6 Making the initial settings according to the region and environment in which you live
- Changing the TV format setting (page 41)
- Changing the frequency step (page 41)
- Changing the OSD display language (OSD Language) (page 40)

7 Using the AVNavigator functions (page 36)

8 MCACC speaker settings
- Automatically conducting optimum sound tuning (Full Auto MCACC) (page 37)

9 The Input Setup menu (page 39)
(When using connections other than the recommended connections)

10 Basic playback (page 42)

11 Adjusting the sound and picture quality as desired
- Using the various listening modes (page 50)
- Better sound using Phase Control (page 53)
- Measuring the all EQ type (SYMMETRY/ALL CH ADJ/FRONT ALIGN) (page 80)
- Changing the channel level while listening (page 84)
- Switching on/off the Acoustic Calibration EQ, Auto Sound Retriever or Dialog Enhancement (page 69)
- Setting the PQLS function (page 69)
- Setting the Audio options (page 65)
- Setting the Video options (page 67)

12 Other optional adjustments and settings
- Control with HDMI function (page 60)
- The Advanced MCACC menu (page 79)
- The System Setup and Other Setup menus (page 86)

13 Making maximum use of the remote control
- Operating multiple receivers (page 74)
- Setting the remote to control other components (page 74)
Before you start

Features

Audio
- **ESS-24bit-DAC-equipped**
  All channels are equipped with ESS SABRE Premier Audio DACs. The Jitter Eliminators achieve clearer sound.
- **Hi-bit 24 Audio Processing**
  Creates a wider dynamic range with digital sources like CDs or DVDs. 16- and 20-bit PCM as well as compressed audio is requantized to 24 bits, and the high frequency component is interpolated upon data processing to enable smoother, more subtle musical expression.
- **Easy setup using Advanced MCACC**
  The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.
- **Auto Phase Control Plus**
  For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function automatically corrects phase shifting on such discs and broadcasts. This function is particularly effective when playing multi-channel music containing low frequency effects (LFE).
- **Phase Control**
  Phase Control effectively eliminates phase lag, which makes the sound lack synchronization, and significantly improves the multi-channel sound without any extra operation.
- **PQLS Bit-stream**
  Jitterless high quality playback is possible by connecting a PQLS-compatible player with HDMI connections. This feature is only available when the connected Pioneer Blu-ray Disc Player supports the PQLS function.

Video
- **Ultra HD (with 4K/60p video support) - Pass-through and upscaling**
  Up to 4K/60p resolution images can be passed through and displayed as such, and the HD (High Definition) or Full HD images of DVDs, Blu-ray discs and HD broadcasts can be upcaled to a resolution of up to 4K/60p and displayed. A separate monitor supporting Ultra HD (4K video) is required.
- **HDMI (4K60p, 3D, Audio Return Channel)**
  7 in/2 out (As for 2 out; You can select ‘Dual out’ or ‘HDZONE out’). A compatible component is required to use the above function.

Network
- **Spotify Digital Music-Streaming Service ready**
  Spotify is a digital music-streaming service that gives you on-demand access to millions of songs. This receiver is ready for Connect from Spotify, which lets you select songs on your Spotify app to listen to on your audio system. For service availability in your country check www.spotify.com.
- **Compatible with Windows 8.1**
  This receiver is compatible with Windows 8.1, letting you easily stream music from compatible PCs on your home network.
- **Apple AirPlay**
  With AirPlay you can stream music from iTunes to this receiver and play it through your home theater system. You can even use the receiver to view metadata including song titles, artist’s names as well as the album art on a connected display. You can easily enjoy your iTunes music in any room in the house.
- **DLNA Certified (1.5)**
  This receiver is a DLNA certified (1.5) device, enabled to work not only as a DMP (Digital Media Player) for playing DMS (Digital Media Server) audio files, but also as a DMR (Digital Media Renderer) to be controlled remotely by a device such as a smartphone or PC.
- **Internet Radio**
  By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations.

Connectivity
- **Easy Network connection with the Wireless LAN converter**
  With the AS-WL300 wireless LAN converter, you can enjoy using a wireless LAN connection for the AV receivers. The AS-WL300 works with the power supply from the AV receiver’s dedicated USB terminal, so no AC adapter is required.
- **Bluetooth adapter ready**
  Using the Bluetooth ADAPTER (AS-BT100 or AS-BT200) lets you enjoy music files on an iPhone or other Bluetooth wireless technology enabled device wirelessly.
- **MHL™ (Mobile High-definition Link)-compatible device playback**
  An incorporates MHL 2 mobile device can be connected to enjoy 3D videos, full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver.
- **HTC Connect**
  HTC Connect makes it easy to wirelessly stream your favorite music straight from your HTC phone. There’s no need for a separate app; HTC Connect is built right in your phone’s music player.
- **iPod Playback**
  Your iPod and iPhone can be connected to the receiver’s USB terminal to play the music files on the iPod or iPhone. Also, the iPod or iPhone is charged when it is connected to the receiver.
Before you start

**Playback/Processing**

- **Multi-channel Music File playback**
  This receiver enables multi-channel music file playback with a resolution of up to 96 kHz/24 bit. Playback of WAV and FLAC files via the front USB port and network is supported.

- **DSD File Music playback (via Network, Front USB and HDMI)**
  Playback of high sound quality DSD music (DSD files and DSD discs (SACDs)) is supported.

- **High Resolution Music Playback**
  High resolution music files with resolutions of 96 kHz/24 bit to 192 kHz/24 bit can be played. Playback of AIFF, Apple Lossless, WAV and FLAC files via the front USB port and network is supported.

- **Gapless Playback**
  The silent section between tracks is skipped when playing music files, eliminating the interruptions that usually occur when playing live or concert contents. This receiver plays back AAC or MP3 format files with a minimum gap even though it is fundamentally impossible to play back without a gap.

- **Virtual Speakers**
  By turning on the ‘Virtual Surround Back’, ‘Virtual Height’, and ‘Virtual Wide’ modes, it is possible to realize a maximum of 11.1 channels combining the speakers that are actually installed and the virtual speakers. This makes for a smoother connection between the sounds and an improved 3D feel.

- **dts Neo:X compatible**
  This receiver supports the latest DTS processing format. The quality of Neo:X, originally designed for 9 channels or more, can be enjoyed in a 7-channel environment.

- **Dolby Pro Logic llz compatible**
  Adding a pair of speakers above the front left and right speakers adds expressiveness in the vertical direction to the previous horizontally-oriented sound field. The height channel strengthens the sound field’s sense of three-dimensionality and air, producing presence and expansion.

**Installation**

- **Built-in AVNavigator**
  When accessing the receiver from the browser of your smartphone, tablet, Windows PC or Mac, you can use Wiring Navi, which explains how to connect or Interactive Operation Guide, which visually and intelligibly explains the operation method.

- **iControlAV5 Remote Application**
  This is an application that allows intuitive operation of many of the receiver’s functions. This application is available on the App Store for iPhone, iPod touch and iPad. You can also get it on Google Play for Android smartphones. The application can be downloaded free of charge.

- **HDZONE output**
  This receiver supports output of the HDMI output to a subzone room. Powerful images can be enjoyed simply by connecting this receiver to a TV supporting 4K/Full-HD/3D. In addition, a multi-channel environment can be created by connecting this receiver to another AV receiver in the subzone room.

- **ZONE Ready**
  This receiver is equipped with HDZONE and ZONE 2. HDZONE supports HD audio/video streaming to a separate room via HDMI. Multi-Zone enables music and movie playback from different sources in three zones at the same time. With HDZONE, you can select not only HDMI input but also INTERNET RADIO or iPod/USB and the like.

- **Energy Saving Design**
  This AV receiver has an ecological design. In addition to even lower power consumption in standby, the receiver is equipped with an ‘eco mode’ for low power consumption when playing contents as well. Furthermore, the eco mode can easily be set with a dedicated button on the remote control of using iControlAV5.
Before you start

Checking what’s in the box

Please check that you’ve received the following supplied accessories:

- Setup microphone (cable: 5 m)
- Remote control unit
- AAA size IEC R03 dry cell batteries (to confirm system operation) x2
- AM loop antenna
- FM wire antenna
- Power cord
- CD-ROM
- Quick start guide
- Safety Brochure

Handling the CD-ROM

Precautions For Use

- This CD-ROM is for use with a personal computer. It cannot be used with a DVD player or music CD player. Attempting to play this CD-ROM with a DVD player or music CD player can damage speakers or cause impaired hearing due to the large volume.

License

- Please agree to the “Terms of Use” indicated below before using this CD-ROM. Do not use if you are unwilling to consent to the terms of its use.

Terms of Use

- Copyright to data provided on this CD-ROM belongs to PIONEER HOME ELECTRONICS CORPORATION. Unauthorized transfer, duplication, broadcast, public transmission, translation, sales, lending or other such matters that go beyond the scope of “personal use” or “citation” as defined by Copyright Law may be subject to punitive actions. Permission to use this CD-ROM is granted under license by PIONEER HOME ELECTRONICS CORPORATION.

General Disclaimer

- PIONEER HOME ELECTRONICS CORPORATION does not guarantee the operation of this CD-ROM with respect to personal computers using any of the applicable OS. In addition, PIONEER HOME ELECTRONICS CORPORATION is not liable for any damages incurred as a result of use of this CD-ROM and is not responsible for any compensation. The names of private corporations, products and other entities described herein are the registered trademarks or trademarks of their respective firms.

Installing the receiver

- When installing this unit, make sure to put it on a level and stable surface.
- Don’t install it on the following places:
  - on a color TV (the screen may distort)
  - near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
  - in direct sunlight
  - in damp or wet areas
  - in extremely hot or cold areas
  - in places where there is vibration or other movement
  - in places that are very dusty
  - in places that have hot fumes or oils (such as a kitchen)
- Do not touch this receiver’s bottom panel while the power is on or just after it is turned off. The bottom panel becomes hot when the power is on (or right after it is turned off) and could cause burns.

Loading the batteries

The batteries included with the unit are to check initial operations; they may not last over a long period. We recommend using alkaline batteries that have a longer life.

![Loading batteries diagram]

WARNING

- Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

CAUTION

Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:

- Never use new and old batteries together.
- Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
- When inserting the batteries, make sure not to damage the springs on the battery’s (+) terminals. This can cause batteries to leak or overheat.
- Batteries with the same shape may have different voltages. Do not use different batteries together.
- When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country/area.
## Operating range of remote control unit

The remote control may not work properly if:

- There are obstacles between the remote control and the receiver’s remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.

![Remote Control Diagram]
Controls and displays

Remote control ..............................................................................................................................12
Display............................................................................................................................................14
Front panel.....................................................................................................................................15
The remote has been conveniently color-coded according to component control using the following system:

- **White** – Receiver control, TV control
- **Blue** – Operation of other devices and each input (TUNER, etc.) (See pages 44, 45, 47, 48 and 77.)

1. **STANDBY/ON**
   This switches between standby and on for this receiver.

2. **ALL ZONE STBY**
   Use this button to perform unique operations (page 76).

3. **MAIN RECEIVER**
   Switches the remote to control the receiver (used to select the white commands). Switch to perform operations in the main zone.

4. **SOURCE CONTROL buttons**
   Switches the input. Also, switches remote control operation mode for operating other devices or each input (TUNER, etc.) (page 74).
   The input for HDMI, NET and ALL switches each time these buttons are pressed.

5. **TV control buttons**
   These buttons can be used to perform operations on the TV to which the TV INPUT button is assigned. The TV can be operated with these buttons regardless of the input set for the remote control’s operation mode (page 74).

6. **Receiver Control buttons**
   - **STATUS** – Displays the IP address and information such as selected/set functions and input signals on the display (page 71).
   - **OUT P.** (OUTPUT PARAMETER) – Switches the output terminal of the HDMI signal or speaker terminal to be played (page 69).
   - **RETURN** – Press to confirm and exit the current menu screen.
   - **CH LV.** (CHANNEL LEVEL) – Press repeatedly to select a channel, then use arrow buttons to adjust the level (pages 69 and 88).

7. **Receiver setting buttons**
   - Press **MAIN RECEIVER** first to access:
     - **AUDIO P.** (AUDIO PARAMETER) – Use to access the Audio options (page 65).
     - **VIDEO P.** (VIDEO PARAMETER) – Use to access the Video options (page 67).
     - **HOME MENU** – Use to access the Home Menu (pages 39, 40, 61, 80 and 87).

8. **t/ j/ k/ l/ ENTER**
   Use the arrow buttons when setting up your surround sound system (see page 80) and the Audio or Video options (page 65 or 67).

9. **LISTENING MODE buttons**
   - **AUTO** (AUTO SURROUND/ALC/STREAM DIRECT) – Switches between Auto Surround (page 51), Auto Level Control mode and Stream Direct mode (page 52).
   - **SURR** (STANDARD SURROUND) – Press for Standard decoding and to switch various modes (Pro Logic, Neo:X, etc.) (page 51).
   - **ADV** (ADVANCED SURROUND) – Use to switch between the various surround modes (page 50).

10. **Source device operation button**
    Operates other devices or each input (TUNER, etc.).

11. **DIMMER**
   Dims or brightens the display (page 71).

12. **SLEEP**
    Use to put the receiver in sleep mode and select the amount of time before sleep (page 71).
13 Remote control LED
Lights when a command is sent from the remote control.

14 SUB ZONE CONTROL buttons
- Z2 (ZONE 2) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to Zone 2 operation.
- Z3 (ZONE 3) – It is not used with this receiver.
- HDZ (HDZONE) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to HDZONE operation.

15 VOLUME +/-
Use to set the listening volume.
To adjust the main zone sound volume, press MAIN RECEIVER first and then press this button. When in the sub zone, press the SUB ZONE CONTROL button first and then press this button.

16 MUTE
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
To mute the main zone sound volume, press MAIN RECEIVER first and then press this button. When in the sub zone, press the SUB ZONE CONTROL button first and then press this button.

17 RCU SETUP
Used to set the remote control (page 74).

**Signal indicators**

Light to indicate the currently selected input signal. **AUTO** lights when the receiver is set to select the input signal automatically (page 53).

**Program format indicators**

Light to indicate the channels to which digital signals are being input.

- **L/R** – Left front/Right front channel
- **C** – Center channel
- **SL/SR** – Left surround/Right surround channel
- **LFE** – Low frequency effects channel (the indicators light when an LFE signal is being input)
- **XL/XR** – Two channels other than the ones above
- **XC** – Either one channel other than the ones above, the mono surround channel or matrix encode flag

**Digital format indicators**

Light when a signal encoded in the corresponding format is detected.

- **DIGITAL** – Lights with Dolby Digital decoding.
- **DIGITAL PLUS** – Lights with Dolby Digital Plus decoding.
- **True HD** – Lights with Dolby TrueHD decoding.
- **DTS** – Lights with DTS decoding.
- **DTS HD** – Lights with DTS-HD decoding.
- **96/24** – Lights with DTS 96/24 decoding.
- **DSD** – Lights during playback of DSD (Direct Stream Digital) signals.
- **DSD PCM** – Light during DSD (Direct Stream Digital) to PCM conversion.
- **PCM** – Lights during playback of PCM signals.
- **MSTR** – Lights during playback of DTS-HD Master Audio signals.

**MULTI-ZONE**

Lights when the MULTI-ZONE feature is active (page 70).

**SOUND**

Lights when the **DIALOG E** (Dialog Enhancement) or **TONE** (tone controls) features is selected (page 65).

**POLLS**

Lights when the POLLS feature is active (page 67).

**S.RTRV**

Lights when the Auto Sound Retriever function is active (page 65).

**Listening mode indicators**

- **ALC** – Lights when the ALC (Auto level control) mode is selected (page 51).
- **AUTO SURROUND** – Lights when the Auto Surround feature is switched on (page 51).
- **STREAM DIRECT** – Lights when Direct/Pure Direct is selected (page 50).
- **ADV SURROUND** – Lights when one of the Advanced Surround modes has been selected (page 52).
- **STANDARD** – Lights when one of the Standard Surround modes is switched on (page 51).

**PHASE CONTROL**

Lights when the Phase Control is switched on (page 53).

**ATT**

Lights when the input signal level is lowered to reduce distortion (page 66).

**Tuner indicators**

- **TUNED** – Lights when a broadcast is being received.
- **STEREO** – Lights when a stereo FM broadcast is being received in auto stereo mode.
- **MONO** – Lights when the mono mode is set using MPX.

**Lights when the sound is muted.**

**Master volume level**

Shows the overall volume level.

**SLEEP**

Lights when the receiver is in sleep mode (page 71).

**Matrix decoding format indicators**

- **PRO LOGIC II** – This lights to indicate Pro Logic II / Pro Logic IIX decoding (page 51).

**Character display**

Displays various system information.

**Remote control mode indicator**

Lights to indicate the receiver’s remote control mode setting. (Not displayed when set to 1.) (page 91)
**Controls and displays**

**Front panel**

1. **STANDBY/ON**
   - This switches between standby and on for this receiver.

2. **INPUT SELECTOR dial**
   - Use to select an input function.

3. **Indicators**
   - **ADVANCED MCACC** – Lights when EQ is set to ON in the AUDIO PARAMETER menu (page 65).
   - **FL OFF** – Lights when “off” (nothing displayed) is selected with the display’s dimmer adjustment (page 71).
   - **HDMI** – Blinks when connecting an HDMI-equipped component; lights when the component is connected (page 24).
   - **iPod iPhone** – Lights to indicate iPod/iPhone is connected (page 39).

4. **MULTI-ZONE controls**
   - If you’ve made MULTI-ZONE connections (page 29) use these controls to control the sub zone from the main zone (page 70).

5. **Character display**
   - See Display on page 14.

6. **TUNER controls**
   - **BAND** – Switches between AM and FM radio bands (page 47).
   - **TUNER EDIT** – Use with TUNE / \, PRESET ↔ and ENTER to memorize and name stations for recall (page 29).
   - **TUNE / \** – Find radio frequencies (page 47).
   - **PRESET ↔** – Find preset stations (page 47).

7. **Remote sensor**
   - Receives the signals from the remote control (page 10).

8. **MASTER VOLUME dial**
   - Use to connect headphones. When the headphones are connected, there is no sound output from the speakers.

9. **PHONES jack**

10. **MCACC SETUP MIC jack**
    - Use to connect the supplied microphone (page 37).

11. **SPEAKERS**
    - Use to change the speaker terminal (page 69).

12. **Listening mode buttons**
    - **AUTO SURR/ALC/STREAM DIRECT** – Switches between Auto Surround (page 51), Auto Level Control and Stream Direct mode (page 52).
    - **STANDARD SURROUND** – Press for Standard decoding and to switch various modes (Pro Logic, Neo:X, Stereo etc.) (page 51).
    - **ADVANCED SURROUND** – Use to switch between the various surround modes (page 52).

13. **STATUS**
    - Displays the IP address and information such as selected/set functions and the input signal on the display (page 71).

14. **iPod iPhone DIRECT CONTROL**
    - Change the receiver’s input to the iPod and enable iPod operations on the iPod (page 44).

15. **iPod/iPhone terminals**
    - Use to connect your Apple iPod/iPhone as an audio source (page 32), or connect a USB device for audio and photo playback (page 32).

16. **HDMI 5 INPUT terminal**
    - Use for connection to a compatible HDMI device (Video camera, etc.) (page 33).
## Connecting your equipment

This receiver provides you with many connection possibilities, but it doesn’t have to be difficult. This chapter explains the kinds of components you can connect to make up your home theater system.

**CAUTION**

- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
- When making connections, also keep the power cords of the devices being connected unplugged from the power outlets.
- Depending on the device being connected (amplifier, receiver, etc.), the methods of connection and terminal names may differ from the explanations in this manual. Also refer to the operating instructions of the respective devices.

### Rear panel

![Rear panel diagram]

*Note*

The input functions below are assigned by default to the receiver’s different input terminals. Refer to The Input Setup menu on page 39 to change the assignments if other connections are used.

Determining the speakers’ application

This unit permits you to build various surround systems, in accordance with the number of speakers you have.

- Be sure to connect speakers to the front left and right channels (L and R).
- It is also possible to only connect one of the surround back speakers (SB) or neither.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal.

Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Choose one from Plans [A] to [E] below.

Important

- The Speaker System setting must be made if you use any of the connections shown below other than [A] (see Speaker system setting on page 87).
- The speakers from which sound is output can be switched according to the speaker layout/usage pattern (sound is not necessarily output from all connected speakers). Use the OUT P. button to switch the speakers from which sound is output. For details, see Switching the speaker terminals on page 69.

[A] 7.2 channel surround system (Front height)

*Default setting
- Speaker System setting: Normal(SB/FH)

A 7.2 ch surround system connects the left and right front speakers (L/R), the center speaker (C), the left and right front height speakers (FHL/FHR), the left and right surround speakers (SL/ SR), the left and right surround back speakers (SBL/SBR), and the subwoofers (SW 1/SW 2).

It is not possible to produce sound simultaneously from the front height speakers and the surround back speakers. This surround system produces a more true-to-life sound from above.

[B] 7.2 channel surround system (Front wide)

- Speaker System setting: Normal(SB/FW)

This plan replaces the left and right front height speakers shown in [A] with the left and right front wide speakers (FWL/FWR).

It is not possible to produce sound simultaneously from the front wide speakers and the surround back speakers. This surround system provides a sound field with good association between the sounds of the different channels.

[C] 7.2 channel surround system & Speaker B connection

- Speaker System setting: Speaker B

With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback of the same sound on the B speakers. The same connections also allow for 7.2-channel surround sound in the main zone when not using the B speakers.
[D] 5.2 channel surround system & Front Bi-amping connection (High quality surround)
• Speaker System setting: Front Bi-Amp
Bi-amping connection of the front speakers for high sound quality with 5.2-channel surround sound.

[E] 5.2 channel surround system & ZONE 2 connection (Multi Zone)
• Speaker System setting: ZONE 2
With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback on another component in ZONE 2. (The selection of input devices is limited.)

[F] 5.2 channel surround system & HDZONE connection (Multi Zone)
• Speaker System setting: HDZONE
With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback on another component in HDZONE. (The selection of input devices is limited.)

Other speaker connections
• Your favorite speaker connections can be selected even if you have fewer than 5.2 speakers (except front left/right speakers).
• When not connecting a subwoofer, connect speakers with low frequency reproduction capabilities to the front channel. (The subwoofer’s low frequency component is played from the front speakers, so the speakers could be damaged.)
• After connecting, be sure to conduct the Full Auto MCACC (speaker environment setting) procedure. See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37.
Placing the speakers
Refer to the chart below for placement of the speakers you intend to connect.

- Place the surround speakers at 120° from the center. If you, (1) use the surround back speaker, and, (2) don’t use the front height speakers / front wide speakers, we recommend placing the surround speaker right beside you.
- If you intend to connect only one surround back speaker, place it directly behind you.
- Place the left and right front height speakers at least one meter directly above the left and right front speakers.

Some tips for improving sound quality
Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.
- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.
- For the best stereo effect, place the front speakers 2 m to 3 m apart, at equal distance from the TV.
- If you’re going to place speakers around your CRT TV, use shielded speakers or place the speakers at a sufficient distance from your CRT TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround and surround back speakers should be positioned 60 cm to 90 cm higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.
- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.

Connecting the speakers
Each speaker connection on the receiver comprises a positive (+) and negative (−) terminal. Make sure to match these up with the terminals on the speakers themselves.
This unit supports speakers with a nominal impedance of 6 Ω to 16 Ω.

**CAUTION**
- These speaker terminals carry HAZARDOUS LIVE voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.

Bare wire connections
Make sure that all speakers are securely installed. This not only improves sound quality, but also reduces the risk of damage or injury resulting from speakers being knocked over or falling in the event of external shocks such as earthquakes.

1. Twist exposed wire strands together.
2. Loosen terminal and insert exposed wire.
3. Tighten terminal.

Notes
- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.
Installing your speaker system

At the very least, front left and right speakers only are necessary. Note that your main surround speakers should always be connected as a pair, but you can connect just one surround back speaker if you like (it must be connected to the left surround back terminal).

Standard surround connection

The front height terminals can also be used for the front wide and Speaker B speakers.

Front height right Front height left
Front wide right Front wide left
Speaker B - right Speaker B - left

Front right Center Subwoofer 2
Front left Center Subwoofer 1
Surround back right Surround back left
Surround right Surround left

Surround back speaker terminals can be used to connect to the sub zone.

Not connected 6.2 ch surround setting
Not connected Surround back
Surround back right Surround back left

ZONE 2 setting ZONE 2 - Right ZONE 2 - Left
HDZONE setting HDZONE - Right HDZONE - Left

Bi-amping your speakers

Bi-amping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you’re using.

CAUTION

Most speakers with both High and Low terminals have two metal plates that connect the High to the Low terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.

If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.
Connecting your equipment

Bi-wiring your speakers
Your speakers can also be bi-wired if they support bi-amping.

- With these connections, the Speaker System setting makes no difference.

**CAUTION**
- Don’t connect different speakers from the same terminal in this way.
- When bi-wiring as well, heed the cautions for bi-amping shown above.
- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver.

Selecting the Speaker system

The front height terminals can be used for front wide and Speaker B connections, in addition to for the front height speakers. Also, the surround back terminals can be used for bi-amping and ZONE 2 connections, in addition to for the surround back speakers. Make this setting according to the application.

Front height setup
*Default setting

1. Connect a pair of speakers to the front height speaker terminals.
2. If necessary, select ‘Normal(SB/FH)’ from the Speaker System menu.
   See Speaker system setting on page 87 to do this.

Front wide setup

1. Connect a pair of speakers to the front height speaker terminals.
2. Select ‘Normal(SB/FW)’ from the Speaker System menu.
   See Speaker system setting on page 87 to do this.

Speaker B setup

You can listen to stereo playback in another room.

1. Connect a pair of speakers to the front height speaker terminals.
2. Select ‘Speaker B’ from the Speaker System menu.
   See Speaker system setting on page 87 to do this.

Bi-amping setup

Bi-amping connection of the front speakers for high sound quality with 5.1-channel surround sound.

1. Connect bi-amp compatible speakers to the front and surround back speaker terminals.
   See Bi-amping your speakers on page 21.
2. Select ‘Front Bi-Amp’ from the Speaker System menu.
   See Speaker system setting on page 87 to do this.

ZONE 2 setup

With these connections you can simultaneously enjoy 5.1-channel surround sound in the main zone with stereo playback on another component in ZONE 2.

1. Connect a pair of speakers to the surround back speaker terminals.
2. Select ‘ZONE 2’ from the Speaker System menu.
   See Speaker system setting on page 87 to do this.

HDZONE setup

With these connections you can simultaneously enjoy 5.1-channel surround sound in the main zone with stereo playback on another component in HDZONE.

1. Connect a pair of speakers to the surround back speaker terminals.
2. Select ‘HDZONE’ from the Speaker System menu.
   See Speaker system setting on page 87 to do this.

About the audio connection

Types of cables and terminals | Transferable audio signals
--- | ---
HDMI | HD audio
Digital (Coaxial) | Conventional digital audio
Digital (Optical) | Conventional digital audio
RCA (Analog) (White/Red) | Conventional analog audio

- With an HDMI cable, video and audio signals can be transferred in high quality over a single cable.
- For HD audio, see About HDMI on page 23.
The video converter ensures that all video sources are output through the HDMI OUT terminal. If the TV is only connected to the receiver's composite VIDEO MONITOR OUT jacks, all the other video devices must be connected through composite connections. If several video components are assigned to the same input function (see The Input Setup menu on page 39), the converter gives priority to HDMI, component, then composite (in that order).

- If the video signal does not appear on your TV, try adjusting the resolution settings on your component or disconnecting the HDMI cable during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.
- The converter supports the functions described below through HDMI connections:
  - Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
  - 3D signal transfer
  - Deep Color signal transfer
  - x.v.Color signal transfer
  - ARC (Audio Return Channel)
  - 4K signal transfer
  - This may not operate properly, depending on the connected equipment.
  - 4K 24p, 4K 25p, 4K 30p, 4K 50p and 4K 60p signals are supported.
  - Input of multi-channel linear PCM digital audio signals (192 kHz or less) for up to 8 channels
  - Input of the following digital audio formats:
    - Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio, DTS-HD High Resolution Audio), CD, SACD (DSD signal)
  - Synchronized operation with components using the Control with HDMI function (see Control with HDMI function on page 69)
  - An HDMI connection can only be made with DVI-equipped components compatible with both DVI and High Bandwidth Digital Content Protection (HDCP). If you choose to connect to a DVI connector, you will need a separate adaptor (DVI→HDMI) to do so. A DVI connection, however, does not support audio signals. Consult your local audio dealer for more information.
  - If you connect a component that is not compatible with HDCP, an HDCP ERROR message is displayed on the front panel display. Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video this is not a malfunction.
  - Depending on the component you have connected, using a DVI connection may result in unreliable signal transfers.
  - This receiver supports SACD, Dolby Digital Plus, Dolby TrueHD and DTS-HD Master Audio. To take advantage of these formats, however, make sure that the component connected to this receiver also supports the corresponding format.
  - Use a High Speed HDMI®/TM Cable. If an HDMI cable other than a High Speed HDMI®/TM Cable is used, it may not work properly.
  - When an HDMI cable with a built-in equalizer is connected, it may not operate properly.
  - Signal transfer is only possible when connected to a compatible component.
  - HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
  - Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

Notes:
- With factory default settings, video from the video cable or component cable will not be output from the HDMI terminal. To output video, you must switch video input to the device connected with the video cable or component cable and set V.CONV to ON (page 67).
- The only exception is HDMI: since this resolution cannot be downsized, you must connect your monitor/TV to the receiver's HDMI output when connecting this video source.
- If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, try switching Digital Video Conversion (in Setting the Video options on page 67) OFF.
- The signal input resolutions that can be converted from the component video input for the HDMI output are 480i/576i, 480p/576p, 720p and 1080i. 1080p signals cannot be converted.

This item incorporates copy protection technology that is protected by U.S. patents and other intellectual property rights of Rovi Corporation. Reverse engineering and disassembly are prohibited.
Connecting your TV and playback components

Connecting using HDMI

If you have an HDMI or DVI (with HDCP) equipped component (Blu-ray Disc player (BD), etc.), you can connect it to this receiver using a commercially available HDMI cable.

If the TV and playback components support the Control with HDMI feature, the convenient Control with HDMI functions can be used (see Control with HDMI function on page 60).

- When connecting to an HDMI/DVI-compatible monitor using the HDMI OUT 2 terminal, switch the HDMI output setting to OUT 2 or OUT 1+2. See Switching the HDMI output on page 69. Also, MAIN/HDZONE must be set to MAIN beforehand (Page 92).
- For input components, connections other than HDMI connections are also possible (see Connecting your DVD player with no HDMI output on page 25).
- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables.
  - When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 61).
  - After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
  - If you use a coaxial digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital or analog audio input you connected the TV to (see The Input Setup menu on page 39).
  - Please refer to the TV’s operation manual for directions on connections and setup for the TV.

Diagram showing connections and setup options.
Connecting your DVD player with no HDMI output

This diagram shows connections of a TV (with HDMI input) and DVD player (or other playback component with no HDMI output) to the receiver.

- With factory default settings, video from the video cable or component cable will not be output from the HDMI terminal. To output video, you must switch video input to the device connected with the video cable or component cable and set V.CONV to ON (page 67).
- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 24).
- When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 61).
- If you use an optical digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the player to (see The Input Setup menu on page 39).
- If HDZONE is set to on, video images connected using a video cable or component cable are not output from the HDMI terminal. To output video images, turn HDZONE off (page 70).
Connecting your TV with no HDMI input

This diagram shows connections of a TV (with no HDMI input) and DVD player (or other playback component) to the receiver.

**Important**
- With these connections, the picture is not output to the TV even if the DVD player is connected with an HDMI cable. Connect the receiver and TV using the same type of video cable as used to connect the receiver and player.
- Also, when the receiver and TV are connected by anything other than an HDMI cable, the OSD function allowing display of the receiver’s settings, operations, etc., on the TV’s screen cannot be used. In this case, watch the receiver’s front panel display while performing the various operations and making settings.

![Diagram of TV and DVD player connections](image)

- In order to listening to HD audio with this receiver, connect an HDMI cable, and use analog video cable for video signal input.
- With factory default settings, video from the video cable or component cable will not be output from the HDMI terminal. To output video, you must switch video input to the device connected with the video cable or component cable and set V.CONV to ON (page 67).
- If HDZONE is set to on, video images connected using a video cable or component cable are not output from the HDMI terminal. To output video images, turn HDZONE off (page 70).

Connecting a satellite/cable receiver or other set-top box

Satellite and cable receivers, and terrestrial digital TV tuners are all examples of so-called ‘set-top boxes’. When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Setup menu on page 39).

![Diagram of satellite/cable receiver connections](image)
Connecting your equipment

- If your set-top box is equipped with an HDMI output terminal, we recommend connecting it to the receiver’s HDMI SAT/CBL IN terminal. When doing so, also connect the receiver and TV by HDMI (see Connecting using HDMI on page 24).

- Even if your set-top box is equipped with an HDMI output terminal, in some cases the sound is output from the digital audio output (optical or coaxial) and only the video is output from the HDMI output terminal. In this case, make the HDMI and digital audio connections as shown below.

Connecting other audio components

This receiver has both digital and analog inputs, allowing you to connect audio components for playback. When you set up the receiver you’ll need to tell the receiver which input you connected the component to (see also The Input Setup menu on page 30).

- If your turntable has line-level outputs (i.e., it has a built-in phono pre-amp), connect it to the ANALOG IN 1 (CD) inputs instead.

— If you use a digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the set-top box to (see The Input Setup menu on page 30).
Connecting additional amplifiers
This receiver has more than enough power for any home use, but it’s possible to add additional amplifiers to front and subwoofer channels of your system using the pre-outs. Make the connections shown below to add amplifiers to power your speakers.

- If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 84) to LARGE.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.
- To hear sound only from the pre-outs, switch the speaker terminals to SP: OFF (page 69) or simply disconnect any speakers that are connected directly to the receiver.

Connecting AM/FM antennas
Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Connecting external antennas on page 29).

1. Pull off the protective shields of both AM antenna wires.
2. Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3. Fix the AM loop antenna to the attached stand. To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
   - If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4. Place the AM antenna on a flat surface and in a direction giving the best reception.
5. Connect the FM wire antenna into the FM antenna socket. For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.
Connecting external antennas

To improve FM reception, connect an external FM antenna to FM UNBAL 75 Ω.

To improve AM reception, connect a 5 m to 6 m length of vinyl-coated wire to the AM LOOP terminals without disconnecting the supplied AM loop antenna.

For the best possible reception, suspend horizontally outdoors.

MULTI-ZONE setup

This receiver can power up to three independent systems in separate rooms after you have made the proper MULTI-ZONE connections.

Different sources can be playing in three zones at the same time or, depending on your needs, the same source can also be used. The main and sub zones have independent power (the main zone power can be off while one (or both) of the sub zones is on) and the sub zones can be controlled by the remote or front panel controls.

Making MULTI-ZONE connections

It is possible to make these connections if you have separate speakers for your primary (ZONE 2) sub zone. You will also need a separate amplifier if you are not using the speaker terminals for your primary sub zone. (For detail, see MULTI-ZONE setup using speaker terminals (ZONE 2) on page 30.)

Also, if the separate receiver in the sub zone has an HDMI input terminal, this unit’s HDMI input can be played as HDZONE.

Here are two primary sub zone setups possible with this system. Choose whichever works best for you.

Important!
- The settings must be changed at ZONE Setup in order to use the multi-zone function (page 90).
- MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 90).

MULTI-ZONE listening options

The following table shows the signals that can be output to ZONE 2 and HDZONE:

<table>
<thead>
<tr>
<th>Sub Zone</th>
<th>Input functions available</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZONE 2</td>
<td>DVD, SAT/CBL, INTERNET RADIO, MEDIA SERVER, FAVORITES, iPod/USB, TV, CD, TUNER, ADAPTER PORT (Outputs analog audio)</td>
</tr>
<tr>
<td>HDZONE (&lt;b&gt;)</td>
<td>BD, DVD, SAT/CBL, INTERNET RADIO, MEDIA SERVER, FAVORITES, iPod/USB, HDMI 1, HDMI 2, HDMI 3, HDMI 4, HDMI 5, HDMI 6/MHL (Outputs HDMI audio and video signals)</td>
</tr>
</tbody>
</table>

a It is not possible to down-convert the audio input signal from the HDMI input terminals or digital input terminals (OPTICAL and COAXIAL) and output them to ZONE 2.

b • The inputs that can be switched differ according to how terminals HDMI IN 1 to IN 6 are assigned. Upon shipment from the factory, the input terminals are assigned to DVD, SAT/CBL, HDMI 3, HDMI 4, HDMI 5 and HDMI 6/MHL, in order starting from terminal HDMI IN 1.
• The video/audio signals of the RCA analog input terminals, the digital input terminals (OPTICAL and COAXIAL) and the COMPONENT VIDEO input terminals cannot be up-converted and output to the HDZONE.
• When any of the HDMI 3 to HDMI 6/MHL inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the HDZONE. (Inputs other than the ones listed here can be selected.) The same limitations apply when one of the above inputs is selected for the HDZONE.

Note

When any of the INTERNET RADIO, MEDIA SERVER, FAVORITES, iPod/USB or ADAPTER PORT inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the sub zone. (Inputs other than the ones listed here can be selected.) The same limitations apply when one of the above inputs is selected for the sub zone.
Basic MULTI-ZONE setup (ZONE 2)
- Connect a separate amplifier to the AUDIO ZONE 2 OUT jacks on this receiver.
  You should have a pair of speakers attached to the sub zone amplifier as shown in the following illustration.

Multi-ZONE setup using speaker terminals (ZONE 2)
You must select ZONE 2 in Speaker system setting (page 87) to use this setup.
- Connect a pair of speakers to the surround back speaker terminals.
  You should have a pair of speakers attached to the surround back speaker terminals as shown below.

Multi-ZONE setup using HDMI terminal (HDZONE)
Important
- The settings must be changed at ZONE Setup in order to use the HDZONE function (page 92).
- To use the HDZONE functions, set Control or Control Mode in HDMI Setup to OFF. For details, see HDMI Setup on page 61.
- Connect a separate receiver to the HDMI OUT 2 (HDZONE) terminal on this receiver.
  Connect speakers and a TV to the HDZONE receiver as shown on the illustration below.
Multi-zone connection using the HDMI terminal and speaker terminals (HDZONE)

Important
- The settings must be changed at ZONE Setup in order to use the HDZONE function (page 92).
- To use the HDZONE functions, set Control or Control Mode in HDMI Setup to OFF. For details, see HDMI Setup on page 61.
- You must select HDZONE in Speaker system setting (page 87) to use this setup.

1. Connect a pair of speakers to the surround back speaker terminals.
You should have a pair of speakers attached to the surround back speaker terminals as shown below.

2. Connect a TV monitor to the HDMI OUT 2 (HDZONE) terminal on this receiver.

Connecting to the network through LAN interface
By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations. To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand. When connected in this way, you can play audio files stored on the components on the local network, including your computer.

LAN terminal specifications
- LAN terminal : Ethernet jack (10BASE-T/100BASE-TX)

Notes
- Refer to the operation manual of the equipment you have as the connected equipment and connection method may differ depending on your Internet environment.
- When using a broadband Internet connection, a contract with an Internet service provider is required. For more details, contact your nearest Internet service provider.
Connecting your equipment

Connecting optional Bluetooth ADAPTER

When the Bluetooth® ADAPTER (AS-BT100 or AS-BT200) is connected to this receiver, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly.

- The Bluetooth wireless technology enabled device must support A2DP profiles.
- Pioneer does not guarantee proper connection and operation of this unit with all Bluetooth wireless technology enabled devices.

![Bluetooth ADAPTER](image)

Important

- Do not move the receiver with the Bluetooth ADAPTER connected. Doing so could cause damage or faulty contact.

- Switch the receiver into standby and connect Bluetooth ADAPTER to the BT AUDIO.

- For instructions on playing the Bluetooth wireless technology device, see Pairing the Bluetooth ADAPTER and Bluetooth wireless technology device on page 48.

Connecting an iPod

This receiver has a dedicated iPod terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver.

- An iPod/iPhone can be connected to the receiver. For details on supported models and versions of the respective products, see Playing an iPod on page 44.

- Switch the receiver into standby, and then use the iPod cable to connect your iPod to the iPod/iPhone terminal on the front panel of this receiver.

- For the cable connection, also refer to the operating instructions for your iPod.

- When connecting an iPhone to this unit, keep the iPhone at least 20 cm (0.66 ft) away from this unit. If the iPhone is kept closer to this unit and a telephone call is received by the iPhone, noise may be output from this device.

- iPod recharging occurs whenever an iPod is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)

- For instructions on playing the iPod, see Playing an iPod on page 44.

Connecting a USB device

It is possible to play audio and photo files by connecting USB devices to this receiver.

- For instructions on playing the USB device, see Playing a USB device on page 45.

![USB mass storage device](image)

Tip

- Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.

- This receiver does not support a USB hub.

- For instructions on playing the USB device, see Playing a USB device on page 45.
Connecting your equipment

Connecting an MHL-compatible device
An MHL-compatible mobile device can be connected to enjoy 3D/Full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver. Use the MHL cable to connect the device.

- Switch the receiver into standby then use the MHL cable to connect your MHL enabled device to the MHL terminal on the rear panel of this receiver.
  - To automatically switch to the MHL input when an MHL-compatible device is connected, see MHL Setup on page 90.
  - The MHL-compatible device is recharged whenever it is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
  - For instructions on playing the MHL-compatible device, see Playing an MHL-compatible device on page 46.
  - Do not place the MHL device on this unit which has the power turned on.

Connecting to a wireless LAN
Wireless connection to the network is possible through a wireless LAN connection. Use the separately sold AS-WL300 for connection.

- Use only the furnished accessory connecting cable.
- Certain settings are required to use a wireless LAN converter (AS-WL300). For instructions on making these settings, see the operating instructions included with the wireless LAN converter (AS-WL300).

Connecting an HDMI-equipped component to the front panel input

Video camera (etc.)
Connecting your equipment

Connecting an IR receiver

If you keep your stereo components in a closed cabinet or shelving unit, or you wish to use the sub zone remote control in another zone, you can use an optional IR receiver (such as a Niles or Xantech unit) to control your system instead of the remote sensor on the front panel of this receiver.

- Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
- Note that other manufacturers may not use the IR terminology. Refer to the manual that came with your component to check for IR compatibility.
- If using two remote controls (at the same time), the IR receiver’s remote sensor takes priority over the remote sensor on the front panel.

1. Connect the IR receiver sensor to the IR IN jack on the rear of this receiver.

2. Connect the IR IN jack of another component to the IR OUT jack on the rear of this receiver to link it to the IR receiver.

Plugging in the receiver

Only plug in after you have connected all your components to this receiver, including the speakers.

**CAUTION**

- Handle the power cord by the plug part. Do not pull out the plug by tugging the cord, and never touch the power cord when your hands are wet, as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, or other object on the power cord or pinch the cord in any other way. Never make a knot in the cord or tie it with other cables. The power cords should be routed so that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electric shock. Check the power cord once in a while. If you find it damaged, ask your nearest Pioneer authorized independent service company for a replacement.
- Do not use any power cord other than the one supplied with this unit.
- Do not use the supplied power cord for any purpose other than that described below.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.

1. Plug the supplied power cord into the AC IN socket on the back of the receiver.
2. Plug the other end into a power outlet.
Basic Setup

How to use the built-in AVNavigator .................................................................36
Automatically conducting optimum sound tuning (Full Auto MCACC) ................37
The Input Setup menu ......................................................................................39
Operation Mode Setup ....................................................................................40
Changing the OSD display language (OSD Language) ....................................40
Changing the TV format setting .....................................................................41
Changing the frequency step .........................................................................41
About the Home Menu ..................................................................................41
How to use the built-in AVNavigator

The built-in AVNavigator is equipped with Wiring Navi, which allows you to perform connection of this receiver and initial settings in interactive mode. By simply following the screen prompts to connect and set the unit, highly accurate initial settings can be performed easily.

Additionally, in order to use various functions easily, contents linked to the receiver can be used.

Operating Environment

- AVNavigator can be used in the following environments.
  - Windows PC: Microsoft® Windows® XP/Windows Vista®/Windows® 7/Windows® 8/Windows® 8.1
  - Mac: Mac OS X (10.7, 10.8 or 10.9)
  - iPad/iPhone/iPod touch: iOS 7
  - Android device: Android 4.0.4, 4.1.1, 4.1.2, 4.2, 4.2.2, 4.4.2

- Some AVNavigator functions use an Internet browser. The following browsers are supported:
  - Windows PC: Internet Explorer® 8, 9, 10, 11
  - Mac/iPad/iPhone/iPod touch: Safari 6.0
  - Android device: Android browser

- To use certain AVNavigator functions, you must install the latest Adobe® Flash® Player. For details, visit the following website.
  http://www.adobe.com/downloads/

- Depending on the computer network setting or security setting, AVNavigator may not operate.

Using AVNavigator

**Important**

- Connect the LAN terminal to the network (page 31).

1. Press STANDBY/ON to switch on the receiver and your computer.

2. Launch AVNavigator.

   Operate AVNavigator by following the screen prompts of your computer, etc.

   - If using a Windows PC, complete the below steps to start up.
     ① Start up Internet Explorer on your PC (open any random Internet page).
     ② Press STATUS on the remote control and check the front panel display on the receiver (the IP address of the receiver will appear).

     (Example Text Display)

     192.168.0.124

     If 0.0.0.0 or 169.254.112.202 appears in the address, it indicates that the receiver is not connected to the network. Check to make sure that the receiver and router are properly connected.

     ③ Enter number in ② above in the field in Internet Explorer shown below and then press the ENTER key.

     (Example Input Format) 192.168.0.124

- With a Windows PC other than Windows XP, you can use the following method to launch AVNavigator.

  Launch Explorer and right-click <VSX-924> displayed in the ‘Network’ folder, then click ‘View device webpage’.

- On a Mac, launch Safari and click <VSX-924> displayed in ‘Bonjour’ on the Bookmarks bar.

  - If ‘Bonjour’ is not displayed, tick the ‘Include Bonjour in the Favorites bar’ check box on the ‘Advanced’ tab in the Safari ‘Preferences...’ menu.
When using an iPad/iPhone/iPod touch, from the App Store, download iControlAV5, which is a free application. After launching iControlAV5, follow the instructions on the screen. After that, on the Home screen, tap ‘AVNavigator’ or the icon.

When using an Android device, from Google Play Store, download iControlAV5, which is a free application. After launching iControlAV5, follow the instructions on the screen. After that, on the Home screen, tap the icon.

3 Select and use the desired function.
AVNavigator includes the following functions:
- Wiring Navi – Guides you through connections and initial settings in dialog fashion. High precision initial settings can be made easily.
- Interactive Operation Guide – The receiver will be operated using the remote control on the screen and you can view function explanations or videos. Explanations of the functions that are operated using the remote control are also automatically displayed.
- Network Setup – Used to make network-related settings.

Automatic conducting optimum sound tuning (Full Auto MCACC)
The Full Auto MCACC Setup measures the acoustic characteristics of your listening area, taking into account ambient noise, speaker connection and speaker size, and tests for both channel delay and channel level. After you have set up the microphone provided with your system, the receiver uses the information from a series of test tones to optimize the speaker settings and equalization for your particular room.

Important
- Make sure the microphone and speakers are not moved during the Full Auto MCACC Setup.
- Using the Full Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.
- Before using the Full Auto MCACC Setup, the headphones should be disconnected.
- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDBZONE (page 92) and HDMI output (page 69) settings.

CAUTION
- The test tones used in the Full Auto MCACC Setup are output at high volume.
1 Press □ STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.
2 Connect the microphone to the MCACC SETUP MIC jack on the front panel.

Make sure there are no obstacles between the speakers and the microphone. If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone. Install the microphone on a stable floor. Placing the microphone on any of the following surfaces may make accurate measurement impossible:
- Sofas or other soft surfaces.
- High places such as tabletops and sofa tops.
The Full Auto MCACC display appears once the microphone is connected.

- If you leave the GUI screen for over five minutes, the screen saver will appear.

3. **Press MAIN RECEIVER to switch the remote control to the receiver operation mode.**

4. **Select the parameters you want to set.**
   - If the speakers are connected using any setup other than Normal(SB/FH), be sure to set Speaker System before the Full Auto MCACC Setup. See **Speaker system setting** on page 87.
   - **Speaker System** – Shows the current settings. When this is selected and ENTER is pressed, the speaker system selection screen appears. Select the proper speaker system, then press **RETURN** to return.
   - If you are planning on bi-amping your front speakers, or setting up a separate speaker system in another room, read through **Speaker system setting** on page 87 and make sure to connect your speakers as necessary before continuing to step 4.
   - **EQ Type** – This determines how the frequency balance is adjusted. Normally select **SYMMETRY**. For details, see **Automatic MCACC (Expert)** on page 81.
   - **MCACC** – The six MCACC presets are used for storing surround sound settings for different listening positions. Simply choose an unused preset for now (you can rename it later in **Data Management** on page 85).
   - **Measurement Type** – When **Basic** is set, the minimum required measurement is performed in a short period of time. When **Expert** is set, accurate and precise measurement is performed so it will take some time.

5. **Select ‘START’, then press ENTER.**

6. **Follow the instructions on-screen.**
   - Make sure the microphone is connected, and if you’re using a subwoofer, make sure it is switched on and set to a comfortable volume level.

7. **Wait for the test tones to finish, then confirm the speaker configuration in the GUI screen.**
   - A progress report is displayed on-screen while the receiver outputs test tones to determine the optimum receiver settings.
   - Again, try to be as quiet as possible while this is happening. It may take 3 to 10 minutes.

8. **Make sure ‘OK’ is selected, then press ENTER.**
   - A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings.

9. **The Full Auto MCACC Setup procedure is completed and the Home Menu menu reappears automatically.**
   - Be sure to disconnect the microphone from this receiver upon completion of the Full Auto MCACC Setup.
   - The settings made in the Full Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the **Advanced MCACC** menu on page 79, or the **System Setup and Other Setup menus** on page 86.

### Problems when using the Auto MCACC Setup

If the room environment is not optimal for the Auto MCACC Setup (too much background noise, echo off the walls, obstacles blocking the speakers from the microphone) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.), that may be affecting the environment and switch them off if necessary. If there are any instructions showing in the front panel display, please follow them.

- Some older TVs may interfere with the operation of the microphone. If this seems to be happening, switch off the TV when doing the Auto MCACC Setup.
The Input Setup menu

You only need to make settings in the Input Setup menu if you didn’t hook up your digital equipment according to the default settings (see Input function default and possible settings on page 39). In this case, you need to tell the receiver what equipment is hooked up to which terminal so the buttons on the remote control correspond to the components you’ve connected.

- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDIZONE (page 92) and HDMI output (page 69) settings.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use ▲▼▼◄► and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘System Setup’ from the HOME MENU.

4. Select the input function that you want to set up.
The default names correspond with the names next to the terminals on the rear panel (such as DVD or SAT/CBL which, in turn, correspond with the names on the remote control).

5. Select the input(s) to which you’ve connected your component.

For example, if your DVD player only has an optical output, you will need to change the DVD input function’s Audio In setting from COAX-1 (default) to the optical input you’ve connected it to.

6. When you’re finished, proceed to the settings for other inputs.

There are optional settings in addition to the assignment of the input jacks:

- **Input Name** – You can choose to rename the input function for easier identification. Select Rename to do so, or Default to return to the system default.

- **Input Skip** – When set to ON, that input is skipped when selecting the input using ALL (DVD and other inputs can be still be selected directly with the input function buttons.)

7. When you’re finished, press RETURN.

You will return to the System Setup menu.

### Input function default and possible settings

The terminals on the receiver generally correspond to the name of one of the input functions. If you have connected components to this receiver differently from (or in addition to) the defaults below, see The Input Setup menu on page 39 to tell the receiver how you’ve connected up. The dots (●) indicate possible assignments.

- When ARC at HDMI Setup is set to ON, it is not possible to make assignments to the TV input’s Audio In terminals.
- Only the TV and CD inputs can be assigned to ANALOG-1.
Basic Setup

Operation Mode Setup

This receiver is equipped with a great number of functions and settings. The Operation Mode feature is provided for users who find it difficult to master all these functions and settings.

One of two settings can be selected for the Operation Mode: Expert and Basic.

- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 92) and HDMI output (page 69) settings.

**Important**

- Many of the settings and functions cannot be selected when the Operation Mode is changed to Basic.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use i/j/k/l and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘Operation Mode Setup’ from the HOME MENU.

3. Select the Operation Mode setting you want.

   - **Expert** (default) – Users can set all the functions by themselves.
   - **Basic** – Only certain basic settings can be operated. The settings that can be operated are shown below. They can be set as necessary by referring to the operating instructions.

4. When you’re finished, press RETURN.

You will return to the HOME MENU.

Changing the OSD display language (OSD Language)

The language used on the Graphical User Interface screen can be changed.

- The explanations in these operating instructions are for when English is selected for the GUI screen.
- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 92) and HDMI output (page 69) settings.

1. Press STANDBY/ON to switch on the receiver and your TV.

Make sure that the TV’s video input is set to this receiver (for example, if you connected this receiver to the VIDEO jacks on your TV, make sure that the VIDEO input is now selected).

2. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use i/j/k/l and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

4. Select ‘OSD Language’ from the System Setup menu.

5. Select the desired language.

6. Select ‘OK’ to change the language.

The setting is completed and the System Setup menu reappears automatically.
Basic Setup

Changing the TV format setting
If the Graphical User Interface screen is not displayed correctly, it may be that the TV system is set incorrectly for your country or region.

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press STANDBY/ON.
   The display shows RESET NO.
3. Use TUNE ↑/↓ to select PAL/NTSC PAL, and then use PRESET ←/→ to select PAL or NTSC.

Changing the frequency step
If you find that you can’t tune into stations successfully, the frequency step may not be suitable for your country/region. Here’s how to switch the setting:

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press STANDBY/ON.
   The display shows RESET NO.
3. Use TUNE ↑/↓ to select FREQ STEP 9k, and then use PRESET ←/→ to select 9k or 10k.

About the Home Menu
This receiver’s Home Menu (HOME MENU) can be used to make various settings and to check and adjust items that have been set.

- With factory default settings, the Home Menu screen will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 92) and HDMI output (page 69) settings.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode.
2. To display the Home Menu screen, press HOME MENU on the remote control.

A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

The top level in the Home Menu is as shown below. Refer to the respective explanations to set, check and adjust as necessary.

- Advanced MCACC – Use this to make automatic settings and detailed manual settings for the surround sound. For details, see Making receiver settings from the Advanced MCACC menu on page 80.
- MCACC Data Check – This displays the Advanced MCACC measurement results. Use it to check the MCACC memory. For details, see Checking MCACC Data on page 84.
- Data Management – Use this to manage the data in the MCACC memory. For details, see Data Management on page 85.
- System Setup – Use this to make various settings related to this system. For details, see Making receiver settings from the System Setup menu on page 87.
- Network Information – The setting status of the network-related items can be checked. For detail, see Checking the Network Information on page 90.
- Operation Mode Setup – Use this to select this receiver’s operation mode. For details, see Operation Mode Setup on page 40.
Basic playback

Playing a source ........................................................................................................................................43
Playing an iPod .........................................................................................................................................44
Playing a USB device ...............................................................................................................................45
Playing an MHL-compatible device ........................................................................................................46
Listening to the radio ...............................................................................................................................47
Bluetooth ADAPTER for Wireless Enjoyment of Music ..........................................................................48
Playing a source

Here are the basic instructions for playing a source (such as a DVD disc) with your home theater system.

1. **Switch on your system components and receiver.**
   - Start by switching on the playback component (for example a DVD player), your TV and subwoofer (if you have one), then the receiver (press STANDBY/ON).
   - Make sure that the TV’s video input is set to this receiver.

2. **Select the input function you want to play.**
   - You can use the input function buttons on the remote control or the front panel INPUT SELECTOR dial.
     - As necessary, select the type of audio input signal (page 53).

3. **Press AUTO (AUTO SURR/ALC/STREAM DIRECT) to select ‘AUTO SURROUND’ and start playback of the source.**
   - For such sound sources as Dolby TrueHD and DTS-HD, the surround sound is played. With stereo sound, the sound is played from the left and right front speakers with the default listening mode.
   - To play a stereo sound source in multichannel, press SURR or ADV to select your favorite listening mode.
     - (Example: Press ADV several times to select EXT.STEREO.)
     - You may need to check the digital audio output settings on your DVD player or digital satellite receiver. It should be set to output Dolby Digital, DTS and 88.2 kHz / 96 kHz PCM (2 channel) audio, and if there is an MPEG audio option, set this to convert the MPEG audio to PCM.
   - See also Listening to your system on page 50 for information on different ways of listening to sources.
   - It is possible to check on the front panel display whether or not multi-channel playback is being performed properly. For details, see Auto Surround, ALC and Stream Direct with different input signal formats on page 109.
   - When multi-channel speakers (more than the two front left and right channels) are connected, straight decoding is performed, so the input signal’s format name (for example TrueHD, DTS-HD MSTR or DTS-HD HI RES) is displayed.
   - If the display does not correspond to the input signal and listening mode, check the connections and settings.

4. **Use the VOLUME +/- to adjust the volume level.**
   - Turn down the volume of your TV so that all sound is coming from the speakers connected to this receiver.

---

**Note**

Depending on the input to be played, the playback operation can in some cases be performed using the on-screen display. With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 90) and HDMI output (page 69) settings.

**Turning off the sound**

Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
- Press MUTE.

**Playing a source with HDMI connection**

- Use ALL to select the input function connected to the receiver’s HDMI input terminals. You can also perform the same operation by using the INPUT SELECTOR dial on the front panel or by pressing HDMI on the remote control repeatedly.
  - Set the HDMI parameter in Setting the Audio options on page 65 to THROUGH if you want to hear HDMI audio output from your TV (no sound will be heard from this receiver).
  - If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, use an analog video connection.
Playing an iPod
This receiver has the iPod/iPhone terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver. Here we describe the procedure for playback on an iPod. For playback on a USB device, see Playing a USB device on page 45.

Important
- USB works with iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPhone 3G, iPod touch (1st through 5th generation) and iPod nano (3rd through 7th generation).
- However, some of the functions may be restricted for some models.
- This receiver has been developed and tested for the software version of iPod/iPhone indicated on the website of Pioneer.
  http://pioneer.jp/homeav/support/ios/ao/
- Installing software versions other than indicated on the website of Pioneer to your iPod/iPhone may result in incompatibility with this receiver.
- iPod and iPhone are licensed for reproduction of non-copyrighted materials or materials the user is legally permitted to reproduce.
- Features such as the equalizer cannot be controlled using this receiver, and we recommend switching the equalizer off before connecting.
- Pioneer cannot under any circumstances accept responsibility for any direct or indirect loss arising from any inconvenience or loss of recorded material resulting from the iPod failure.
- When listening to a track on the iPod in the main zone, it is possible to control the sub zone, but not to listen to a different track in the sub zone from the one playing in the main zone.

1 Press STANDBY/ON to switch on the receiver and your TV. See Connecting an iPod on page 32. About one minute is required between turning the power on and completion of startup.
- It is also possible to operate the iPod on the iPod itself, without using the TV screen. For details, see Switching the iPod controls on page 44.
2 Press iPod USB on the remote control to switch the receiver to the iPod/USB. When the display shows the names of folders and files, you’re ready to play music from the iPod.

Playing back audio files stored on an iPod
To navigate songs on your iPod, you can take advantage of the GUI screen of your TV connected to this receiver. You can also control all operations for music in the front panel display of this receiver.
- Note that characters that cannot be displayed on this receiver are displayed as #.
- This feature is not available for photos on your iPod.

Finding what you want to play
When your iPod is connected to this receiver, you can browse songs stored on your iPod by playlist, artist name, album name, song name, genre or composer, similar to using your iPod directly.
1 Use ⌂/⬇ to select a category, then press ENTER to browse that category.
- When ⬆️ or ⬇️ is pressed at the list screen, the page switches.
- To return to the previous level any time, press RETURN.
2 Use ⌂/⬇ to browse the selected category (e.g., albums).
- Use ⬅️/➡️ to move to previous/next levels.
3 Continue browsing until you arrive at what you want to play, then press ⬅️ to start playback.
- On the playback screen, pressing RETURN displays a list screen. To return to the playback screen, press DISP.

Note
You can play all of the songs in a particular category by selecting the All item at the top of each category list. For example, you can play all the songs by a particular artist.

Basic playback controls
This receiver’s remote control buttons can be used for basic playback of files stored on an iPod.

Switching the iPod controls
You can switch over the iPod controls between the iPod and the receiver.
1 Press HOME MENU to switch the iPod controls.
This enables operation and display on your iPod, and this receiver’s remote control and GUI screen become inactive.
2 Press HOME MENU again to switch back to the receiver controls.

Note
Change the receiver’s input to the iPod in one action by pressing the iPod iPhone DIRECT CONTROL button on the front panel to enable iPod operations on the iPod.
Playing a USB device

It is possible to play files using the USB interface on the front of this receiver.
• Compatible USB devices include external magnetic hard drives, portable flash memory drives (particularly key drives) and digital audio players (MP3 players) of format FAT16/32.
• Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.

1 Press STANDBY/ON to switch on the receiver and your TV.
See Connecting a USB device on page 32.
About one minute is required between turning the power on and completion of startup.
• Make sure the receiver is in standby when disconnecting the USB device.
2 Press iPod USB on the remote control to switch the receiver to the iPod/USB.
When the display shows the names of folders and files, you’re ready to play from the USB device.

Note

If an Over Current message lights in the display, the power requirements of the USB device are too high for this receiver. Try following the points below:
• Switch the receiver off, then on again.
• Reconnect the USB device with the receiver switched off.
• Use a dedicated AC adapter (supplied with the device) for USB power.
If this doesn’t remedy the problem, it is likely your USB device is incompatible.

Playing back audio files stored on a USB memory device

The maximum number of levels that you can select in Step 2 (below) is 9.
• Note that non-Roman characters in the playlist are displayed as #.

1 Use ‹ › to select a folder, then press ENTER to browse that folder.
• To return to the previous level any time, press RETURN.
2 Continue browsing until you arrive at what you want to play, then press ‹ › to start playback.
• Copyrighted audio files cannot be played back on this receiver.
• DRM-protected audio files cannot be played back on this receiver.
• On the playback screen, pressing RETURN displays a list screen. To return to the playback screen, press DISP.

Basic playback controls

This receiver’s remote control buttons can be used for basic playback of files stored on USB memory devices.
• Press iPod USB to switch the remote control to the iPod/USB operation mode.

Basic playback controls

Button(s) What it does
ENTER Starts displaying a photo and playing a slideshow.
■ Stops the player and returns to the previous menu.

Note

While a DSD file is being played, ‹‹ and ‹› are disabled.

Playing back photo files stored on a USB memory device

• Photo files cannot be played in the sub zone.

1 Use ‹ › to select a folder, then press ENTER to browse that folder.
• For high resolution files, some time may be required for the photo to appear.
• To return to the previous level any time, press RETURN.
2 Continue browsing until you arrive at what you want to play, then press ENTER to start playback.
The selected content is displayed in full screen and a slideshow starts.

Basic playback controls

Button(s) What it does
ENTER Starts displaying a photo and playing a slideshow.
■ Stops the player and returns to the previous menu.

Tip

Slide shows of photo files can be played while listening to music files by returning to the folder/file list display while playing a music file on a USB device and then playing the photo files. At that time, select music files with a sampling frequency of 48 kHz or less.
About playable file formats

The USB function of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats.

- With MP3, WAV, AAC, FLAC, AIFF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.
- When AAC or MP3 format is used, sound is reproduced with the minimum gap. If you are conscious about gaps, use WAV or FLAC files.

Playing an MHL-compatible device

MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats. The MHL-compatible device’s video signals are output from the TV connected to the receiver, the audio signals are output from the speakers connected to the receiver or TV.

1 Press STANDBY/ON to switch on the receiver and your TV. See Connecting an MHL-compatible device on page 33.
2 Press MHL on the remote control to switch the receiver to the MHL.
3 Select and play the desired contents on the MHL-compatible device.

Notes

- MHL-compatible devices can be operated with the receiver’s remote control by pressing the remote control’s MHL button, but depending on the MHL-compatible device being used, some buttons may not be operable.
- To playback from a MHL-compatible device connected to the receiver on a TV that is also connected to the receiver, the power to the receiver must be turned on.
Listening to the radio

The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the frequency of the station you want, see Tuning directly to a station below. Once you are tuned to a station you can memorize the frequency for recall later—see Saving station presets on page 47 for more on how to do this.

1 Press TUNER to select the tuner.
2 Use BAND to change the band (FM or AM), if necessary.
3 Tune to a station.

There are three ways to do this:

- **Automatic tuning**—To search for stations in the currently selected band, press and hold TUNE +/– for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.
- **Manual tuning**—To change the frequency one step at a time, press TUNE +/–.
- **High speed tuning**—Press and hold TUNE +/– for high speed tuning. Release the button at the frequency you want.

Improving FM sound

If the TUNED or STEREO indicator doesn’t light when tuning to an FM station because the signal is weak, press MPX to switch the receiver into mono reception mode. This should improve the sound quality and allow you to enjoy the broadcast.

Tuning directly to a station

1 Press TUNER to select the tuner.
2 Use BAND to change the band (FM or AM), if necessary.
3 Press D.ACCESS (Direct Access).
4 Use the number buttons to enter the frequency of the radio station.

For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.

If you make a mistake halfway through, press D.ACCESS twice to cancel the frequency and start over.

Saving station presets

If you often listen to a particular radio station, it’s convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This receiver can memorize up to 63 stations, stored in seven banks, or classes (A to G) of 9 stations each.

1 Tune to a station you want to memorize.
2 Press TOOLS (TUNER EDIT).
3 Press CLASS to select one of the seven classes, then press PRESET +/– to select the station preset you want.

You can also use the number buttons to select a station preset.
4 Press ENTER.

After pressing ENTER, the preset class and number stop blinking and the receiver stores the station.

Listening to station presets

1 Press TUNER to select the tuner.
2 Press CLASS to select the class in which the station is stored.
3 Press PRESET +/– to select the station preset you want.

You can also use the number buttons on the remote control to recall the station preset.

Naming station presets

For easier identification, you can name your station presets.

1 Choose the station preset you want to name.
2 Press TOOLS (TUNER EDIT).
3 Press D.ACCESS (Direct Access).

The display shows PRESET NAME, then a blinking cursor at the first character position.

4 Input the name you want.

Use ↑↓ (or TUNE ↑↓ of front panel) to select a character, ←→ (or PRESET ←→ of front panel) to set the position, and ENTER to confirm your selection.

**Notes**

- To erase a station name, simply repeat steps 1 to 3 and input eight spaces instead of a name.
- Once you have named a station preset, you can press DISP when listening to a station to switch the display between name and frequency.
Wireless music play

When the Bluetooth ADAPTER (AS-BT100 or AS-BT200) is connected to this unit, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly. Also, by using a commercially available transmitter supporting Bluetooth wireless technology, you can listen to music on a device not equipped with Bluetooth wireless technology. The AS-BT100 and AS-BT200 models supports SCMS-T contents protection, so music can also be enjoyed on devices equipped with SCMS-T type Bluetooth wireless technology.

Remote control operation

The remote control supplied with this unit allows you to play and stop media, and perform other operations.
- It must be necessary that the Bluetooth wireless technology enabled device supports AVRCP profiles.
- Remote control operations cannot be guaranteed for all Bluetooth wireless technology enabled devices.

Pairing the Bluetooth ADAPTER and Bluetooth wireless technology device

“Pairing” must be done before you start playback of Bluetooth wireless technology content using the Bluetooth ADAPTER. Make sure to perform pairing the first time you operate the system or any time pairing data is cleared. The pairing step is necessary to register the Bluetooth wireless technology device to enable Bluetooth communications. For more details, see also the operating instructions of your Bluetooth wireless technology device.

- Pairing is required when you first use the Bluetooth wireless technology device and Bluetooth ADAPTER.
- To enable Bluetooth communication, pairing should be done with both your system and Bluetooth wireless technology device.
- If the Bluetooth wireless technology device’s security code is “0000”, there is no need to make the security code setting on the receiver. Press BT ADPT to set the ADAPTER PORT input, then conduct the pairing operation on the Bluetooth wireless technology device. If pairing is successful, there is no need to performing the pairing operation below.
- When using the AS-BT200 only: This unit complies with Bluetooth Specifications Ver. 2.1. When this unit and another device equipped with Bluetooth wireless technology both comply with Bluetooth Specification Ver. 2.1, pairing of the two may be possible without the need for inputting a password. In this case, a passcode may be displayed on this receiver and on the device equipped with Bluetooth wireless technology. If pairing is successful, there is no need to performing the pairing operation below.
- When connecting this receiver by Bluetooth connection to the Bluetooth wireless technology device, connection procedures, etc., Bluetooth wireless technology both comply with Bluetooth Specification Ver. 2.1, pairing should be done with both your system and Bluetooth wireless technology device. If pairing is successful, there is no need to performing the pairing operation below.
- Pair one unit at a time.
- When connecting this receiver by Bluetooth connections with a device equipped with the Bluetooth function to listen to music, do not connect any devices other than this receiver by Bluetooth connection to the Bluetooth-equipped device. If a Bluetooth connection is already established with a device other than this receiver, disconnect the other device before connecting this receiver.

1. Press BT ADPT on the remote control to switch the receiver to ADAPTER PORT input.
2. Press TOP MENU to select Bluetooth Setup.
3. Use \+/\- to select ‘PIN’ then press ENTER.
4. Use \+/\- to select one of PIN codes 0000, 1234 or 8888, then press ENTER.
   You can use any of 0000, 1234 or 8888 PIN codes. Bluetooth wireless technology device using any other PIN code cannot be used with this receiver.
5. Press the RETURN button twice to exit Bluetooth Setup.
6. Switch on the Bluetooth wireless technology device that you want to make pair, place it near the receiver and set it to the pairing mode.
7. From the Bluetooth wireless technology device list, select Bluetooth ADAPTER and enter the PIN code selected in step 4.
8. Check to see that the Bluetooth ADAPTER is detected by the Bluetooth wireless technology device.
   If the receiver and Bluetooth wireless technology device are not paired, start over from step 6.

Notes

- The PIN code may in some cases be referred to as PASSKEY.
- For information on enabling pairing on the Bluetooth wireless technology device, connection procedures, etc., see the Bluetooth wireless technology device’s operating instructions.
Listening to music contents of a Bluetooth wireless technology device with your system

1. Press BT ADPT on the remote control to switch the receiver to ADAPTER PORT input.

2. From the Bluetooth wireless technology device, perform the operation to connect to the Bluetooth ADAPTER.
   - When the Bluetooth ADAPTER is not plugged into the BT AUDIO, No Adapter will be displayed if ADAPTER PORT input is selected.

3. Start playback of music contents stored on the Bluetooth wireless technology device. This receiver’s remote control buttons can be used for basic playback of files stored on Bluetooth wireless technology devices.
   - Bluetooth wireless technology device should be compatible with AVRCP profile.
   - Depending on the Bluetooth wireless technology device you use, operation may differ from what is shown in the remote control buttons.

4. While listening to a source, set the remote control to the receiver operation mode, then press ADV repeatedly to select SOUND RETRIEVER AIR.

Notes
- The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by PIONEER CORPORATION is under license. Other trademarks and trade names are those of their respective owners.
- With this receiver, when an iPod is connected or disconnected while the music of a Bluetooth wireless technology device is playing, the connection with the Bluetooth wireless technology device may be canceled.
- The SOUND RETRIEVER AIR listening mode can only be selected when the ADAPTER PORT input.
Listening to your system

Enjoying various types of playback using the listening modes ....................................................... 51
Selecting MCACC presets .............................................................................................................. 53
Choosing the input signal ............................................................................................................. 53
Better sound using Phase Control............................................................................................... 53
Enjoying various types of playback using the listening modes

Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you’re listening to.

To play with surround sound, check “Standard surround sound” or “Using the Advanced surround effects” below and select the desired mode.

To play with the optimum mode for the input signal, see “Auto playback” or “Using Stream Direct”. (The sound is played in stereo when 2-channel signals are input, in surround when multi-channel signals are input.)

**Important**

- The listening modes and many features described in this section may not be available depending on the current source, settings and status of the receiver.

**Auto playback**

There are many ways to listen back to sources using this receiver, but the simplest, most direct listening option is the Auto Surround feature. The receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.

- **While listening to a source, press AUTO (AUTO SURR/ALC/STREAM DIRECT) for auto playback of a source.**

**AUTO SURROUND** shows briefly in the display before showing the decoding or playback format. Check the digital format indicators in the front panel display to see how the source is being processed.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.
- When listening to the ADAPTER PORT input, the **SOUND RETRIEVER AIR** feature is selected automatically.

**ALC** – In the Auto level control (ALC) mode, this receiver equalizes playback sound levels. Also, the low and high frequency sounds, dialogs, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.

**Note**

When **ALC** is selected, the effect level can be adjusted using the **EFFECT** parameter in **Setting the Audio options** on page 65.

**Standard surround sound**

The following modes provide basic surround sound for stereo and multichannel sources.

- **While listening to a source, press SURR (STANDARD SURROUND).**

If necessary, press repeatedly to select a listening mode.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.
- When only one surround back speaker is connected (set), even though a 5.1-channel signal is input, **Pro Logic IIx** cannot be selected and **Pro Logic II** is used.
- **Pro Logic IIz HEIGHT** cannot be selected when no front height speaker is connected. Furthermore, **WIDE SURROUND MOVIE** and **WIDE SURROUND MUSIC** cannot be selected when no front wide speaker is connected.

With two channel sources, you can select from:

- **Pro Logic IIx MOVIE** – Up to 7.1 channel sound (surround back), especially suited to movie sources
- **Pro Logic IIx MUSIC** – Up to 7.1 channel sound (surround back), especially suited to music sources
- **Pro Logic IIx GAME** – Up to 7.1 channel sound (surround back), especially suited to video games
- **Pro Logic IIz** – 4.1 channel surround sound (sound from the surround speakers is mono)
- **Pro Logic IIz HEIGHT** – Up to 7.1 channel sound (front height)
- **WIDE SURROUND MOVIE** – Up to 7.1 channel sound (front wide), especially suited to movie sources
- **WIDE SURROUND MUSIC** – Up to 7.1 channel sound (front wide), especially suited to music sources
- **Neo:X CINEMA** – Up to 7.1 channel sound (surround back, front height or front wide), especially suited to movie sources
- **Neo:X MUSIC** – Up to 7.1 channel sound (surround back, front height or front wide), especially suited to music sources
- **Neo:X GAME** – Up to 7.1 channel sound (surround back, front height or front wide), especially suited to video games
- **STEREO** – The audio is heard with your sound settings and you can still use the audio options. With multichannel sources, if you have connected surround back, front height or front wide speakers, you can select (according to format):
  - **Pro Logic IIx MOVIE** – See above
  - **Pro Logic IIx MUSIC** – See above
  - **Dolby Digital EX** – Creates surround back channel sound for 5.1 channel sources and provides pure decoding for 6.1 channel sources (like Dolby Digital Surround EX)
  - **DTS-ES Matrix** or **DTS-ES Discrete** – Allows you to hear 6.1 channel playback with DTS-ES encoded sources
  - **Neo:X CINEMA** – See above
  - **Neo:X MUSIC** – See above
  - **Neo:X GAME** – See above
  - **Pro Logic IIz HEIGHT** – See above
  - **WIDE SURROUND MOVIE** – See above
  - **WIDE SURROUND MUSIC** – See above
  - **STEREO** – See above
  - **Straight Decode** – Plays back without the effects above.

**Notes**

- When listening sources in **Pro Logic IIz HEIGHT** mode, you can also adjust the **H.GAIN** effect (see **Setting the Audio options** on page 65).
- When listening to 5.1 channel sources in Dolby Pro Logic IIx Music mode, there are three further parameters you can adjust: **C.WIDTH**, **DIMENSION** and **PANORAMA**. See **Setting the Audio options** on page 65 to adjust them.
- When listening to 2-channel sources in Neo:X Cinema, Neo:X Music or Neo:X Game mode, you can also adjust the **C.GAIN** effect (see **Setting the Audio options** on page 65).
- When listening through headphones, you can select **STEREO** mode only.
Using the Advanced surround effects
The Advanced surround effects can be used for a variety of additional surround sound effects. Most Advanced Surround modes are designed to be used with film soundtracks, but some modes are also suited for music sources. Try different settings with various soundtracks to see which you like.

- Press ADV (ADVANCED SURROUND) repeatedly to select a listening mode.
  - ACTION – Designed for action movies with dynamic soundtracks
  - DRAMA – Designed for movies with lots of dialog
  - SPORTS – Suitable for sports programs
  - CLASSICAL – Gives a large concert hall-type sound
  - ROCK/POP – Creates a live concert sound for rock and/or pop music
  - EXT.STEREO – Gives multichannel sound to a stereo source, using all of your speakers
  - F.S.SURROUND – Use to provide a rich surround sound effect directed to the center of where the front left and right speakers sound projection area converges.
  - SOUND RETRIEVER AIR – Suitable for listening to the sound from a Bluetooth wireless technology device. The SOUND RETRIEVER AIR listening mode can only be selected when the ADAPTER PORT input.
  - PHONES SURR – When listening through headphones, you can still get the effect of overall surround.
  - ECO MODE 1 – Select this to play for example music that has a high audio level with a lower power consumption than usual.
  - ECO MODE 2 – Select this to play movies, etc., with a high ratio of low volume scenes and high volume scenes (a large dynamic ratio) with a lower power consumption than usual. This mode provides greater power savings than ECO MODE 1.

**Note**
When listening through headphones, you can select ALC or PURE DIRECT mode only.

Using Stream Direct
Use the Stream Direct modes when you want to hear the truest possible reproduction of a source. All unnecessary signal processing is bypassed, and you’re left with the pure analog or digital sound source. Processing differs depending on the input signal and whether or not surround back speakers are connected. For details, see Auto Surround, ALC and Stream Direct with different input signal formats on page 102.

- While listening to a source, press AUTO (AUTO SURR/ALC/STREAM DIRECT) to select the mode you want.
  Check the digital format indicators in the front panel display to see how the source is being processed.
  - AUTO SURROUND – See Auto playback on page 53.
  - ALC – Listening in Auto level control mode (page 53).
    - When ALC is selected, the effect level can be adjusted using the EFFECT parameter in Setting the Audio options on page 66.
  - DIRECT – Plays back sound from the source with the least modification next to PURE DIRECT. With DIRECT, the only modifications added to PURE DIRECT playback are calibration of the sound field by the MCACC system and the Phase Control effect.
  - PURE DIRECT – Plays back unmodified sound from source with only minimal digital treatment.
Selecting MCACC presets

- Default setting: MEMORY 1

If you have calibrated your system for different listening positions, you can switch between settings to suit the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P+.
2. Use †/‡ to select ‘MCACC’.
3. Use †/‡ to select the setting.

Press repeatedly to select one of the six MCACC presets. See Data Management on page 85 to check and manage your current settings.
- These settings have no effect when headphones are connected.
- You can also press †/‡ to select the MCACC preset.

Choosing the input signal

On this receiver, it is possible to switch the input signals for the different inputs as described below.
- This receiver can only play back Dolby Digital, PCM (32 kHz to 192 kHz) and DTS (including DTS 96/24) digital signal formats. The compatible signals via the HDMI terminals are: Dolby Digital, DTS, PCM (32 kHz to 192 kHz), Dolby TrueHD, Dolby Digital Plus, DTS-EXPRESS, DTS-HD Master Audio and SACD.
- You may get digital noise when an LD, CD, DVD or BD player compatible with DTS is playing an analog signal.
- To prevent noise, make the proper digital connections (page 22) and set the signal input to DIGITAL.
- Some DVD players don’t output DTS signals. For more details, refer to the instruction manual supplied with your DVD player.
- If you have calibrated your system for different listening positions, you can switch between settings to suit the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P+.
2. Use †/‡ to select ‘SIGSEL’.
3. Use †/‡ to select the input signal corresponding to the source component.

Press repeatedly through the options as follows:
- AUTO – The receiver selects the first available signal in the following order: HDMI, DIGITAL, ANALOG.
- ANALOG – Selects an analog signal.
- DIGITAL – Select an optical or coaxial digital input signal. ‘DIGITAL’ is displayed on the front panel display.
- HDMI – Selects an HDMI signal.

When set to DIGITAL or AUTO (only selected DIGITAL or HDMI), the indicators light according to the signal being decoded (see Display on page 14).

Better sound using Phase Control

This receiver’s Phase Control feature uses phase correction measures to make sure your sound source arrives at the listening position in phase, preventing unwanted distortion and/or coloring of the sound. Phase Control technology provides coherent sound reproduction through the use of phase matching for an optimal sound image. The default setting is on and we recommend leaving Phase Control switched on for all sound sources.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P+.
2. Use †/‡ to select ‘PHASE’.
3. Use †/‡ to switch on phase correction.

The PHASE CONTROL indicator on the front panel lights.

Notes

- Phase matching is a very important factor in achieving proper sound reproduction. If two waveforms are ‘in phase’, they crest and trough together, resulting in increased amplitude, clarity and presence of the sound signal. If a crest of a wave meets a trough, then the sound will be ‘out of phase’ and an unreliable sound image will be produced.
- For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. Phase Control Plus function corrects for phase shifting on such discs. For instructions on setting the Phase Control Plus, see Setting the Audio options on page 65.
- If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0º). However, the effect you can actually feel when PHASE CONTROL is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.
- Set the built-in lowpass filter switch of your subwoofer to off. If this cannot be done on your subwoofer, set the cutoff frequency to a higher value.
- If the speaker distance is not properly set, you may not have a maximized PHASE CONTROL effect.
- The PHASE CONTROL mode cannot be set to ON in the following cases:
  - When headphones are plugged in.
  - When the PURE DIRECT mode is switched on.
  - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 65.
Playback with NETWORK features

Introduction ...................................................................................................................................55
Playback with Network functions ................................................................................................56
About network playback ..............................................................................................................58
About playable file formats ........................................................................................................59
**Introduction**

This receiver is equipped with the LAN terminal and you can enjoy the following features by connecting your components to these terminals.

**Listening to Internet radio stations**

You can select and listen to your favorite Internet radio station from the list of Internet radio stations created, edited, and managed by the vTuner database service exclusively for use with the Pioneer products.

→ See **Playback with Network functions** on page 56 and **Listening to Internet radio stations** on page 56.

**Playback the music files stored in PCs**

You can playback a lot of musics stored in your PCs using this unit.

- Besides a PC, you can also play back audio files stored on your other components with the built-in media server function based on DLNA 1.0 or DLNA 1.5 framework and protocols (i.e. network-capable hard disks and audio systems).

→ See **Playback with Network functions** on page 56 and **Playing back audio files stored on components on the network** on page 58.

**Listening to Spotify audio streaming playback**

→ See **About the Spotify audio stream playback function** on page 57.

**Notes**

- To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand.
- Photo or video files cannot be played back.
- With Windows Media Player 11 or Windows Media Player 12, DRM-protected audio files cannot be played back on this receiver.

**About playable DLNA network devices**

This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:

- PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 11 installed
- PCs running Microsoft Windows Vista or XP with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)

Files stored in a PC or DMS (Digital Media Server) as described above can be played via command from an external digital media controller (DMC). Devices controlled by this DMC to play files are called DMRs (Digital Media Renderers). This receiver supports this DMR function. When in the DMR mode, such operations as playing and stopping files can be performed from the external controller. Volume adjustment and the muting control are also possible. The DMR mode is canceled if the remote control unit is operated while in the DMR mode (aside from certain buttons, including the VOLUME +/-, MUTE and DISP).

- Depending on the external controller being used, playback may be interrupted when the volume is adjusted from the controller. In this case, adjust the volume from the receiver or remote control.

**Using AirPlay on iPod touch, iPhone, iPad, and iTunes**

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

To use AirPlay, select your receiver on your iPod touch, iPhone, iPad or in iTunes. ✳1

The receiver’s input will switch automatically to AirPlay when AirPlay is in use. ✳2

The following operations can be performed when in AirPlay mode:

- Adjustment of the receiver’s volume from iPod touch, iPhone, iPad or iTunes.
- Pause/resume, next/previous track, and shuffle/repeat from the remote control of the receiver. ✳3
- Display of the currently playing track information on the receiver’s display, including artist, song and album name.

✳1: For more information, see the Apple website (http://www.apple.com).
✳2: The receiver’s power automatically turns on when Network Standby at Network Setup is set to ON.
✳3: If operation is not possible, press NET, then operate again.

**Notes**

- A network environment is required to use AirPlay.
- The receiver’s name that shows up in the AirPlay UI on iPod touch, iPhone, iPad and iTunes can be changed by Friendly Name from Network Setup.
- AirPlay provided on this receiver has been developed and tested based on the software versions for the iPod, iPhone, iPad and the software versions for iTunes that are indicated on the Pioneer website. AirPlay may not be compatible with iPod, iPhone, iPad or iTunes software versions other than those indicated on the Pioneer website. http://pioneer.jp/homeav/support/ios/ao/

**About the DHCP server function**

To play back audio files stored on components on the network or listen to Internet radio stations, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See **Network Setup menu** on page 89 for more on this.

**Authorizing this receiver**

This receiver must be authorized to enable playback. This happens automatically when the receiver makes a connection over the network to the PC. If not, please authorize this receiver manually on the PC. The authorization (or permission) method for access varies depending on the type of server currently being connected. For more information on authorizing this receiver, refer to the instruction manual of your server.
About HTC Connect
This receiver features “HTC Connect”, a simple way to enjoy music content from your HTC Connect certified smartphone.
1 HTC Connect music streaming provided on this product has been developed based on interoperability testing as defined by the HTC Connect Certification program with the HTC Connect-compatible smartphones.
2 Music Navigation via the music progress bar is not currently supported with HTC Connect.
3 Third party music applications (those other than HTC’s pre-installed “Music” app) have not been tested for compatibility and may not work. HTC Connect has been tested with MP3, AAC, WMA and WAV encoding formats. Other formats may not be compatible.
4 High network congestion may interfere with the operation of HTC Connect.

HTC Connect Certified Smartphones
The HTC Connect-compatible smartphones, Please check Pioneer website for up to date information about compatible devices and audio format support.
- http://www.pioneerhongkong.com.hk (for Hong Kong)

Notes
- Specifications and design subject to modification without notice.
- HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.

Playback with Network functions

Important
- About one minute is required between turning the power on and completion of startup.
- When you play back audio files. “Connecting...” is displayed before playback starts. The display may continue for several seconds depending on the type of file.
- In case a domain is configured in a Windows network environment, you cannot access a PC on the network while you are logged onto the domain. Instead of logging onto the domain, log onto the local machine.
- There are cases where the time elapsed may not be correctly displayed.

1 Press NET repeatedly to select the category you want to play back. It may take several seconds for this receiver to access the network. Select a category from the following list:
   • INTERNET RADIO – Internet radio
     — When INTERNET RADIO is selected, the radio station that was playing last time is played.
   • MEDIA SERVER – Server components on the network
   • FAVORITES – Favorite songs currently being registered Depending on the selected category, the names of folders, files, and Internet radio stations are displayed.

2 Use ↑ / ↓ to select the folder, music files or Internet radio station to play back, and then press ENTER. Press ↑ / ↓ to scroll up and down the list and select the desired item. When you press ENTER, playback starts with the playback screen being displayed for the selected item. To return to the list screen, press RETURN. When the list screen is displayed from the playback screen, the playback screen reappears automatically if no operation is performed for three minutes while the list screen is displayed. Only audio files with the mark can be played. In case of folders with the mark, use ↑ / ↓ and ENTER to select the desired folder and audio files.
   - When is pressed at the list screen, the page switches.
   - To return to the playback screen from the list display, press DISP.

3 Repeat step 2 to play back the desired song.

Basic playback controls
You can perform the following operations with the remote control of this receiver. Note that some buttons are not available for operation depending on the category currently being played back.
- Press NET to switch the remote control to the network operation mode.

Listening to Internet radio stations
Internet radio is an audio broadcasting service transmitted via the Internet. There are a large number of Internet radio stations broadcasting a variety of services from every corner of the world. Some are hosted, managed, and broadcast by private individuals while others are by the corresponding traditional terrestrial radio stations or radio networks. Whereas terrestrial, or OTA (over-the-air), radio stations are geographically restricted on the range of radio waves broadcast from a transmitter through the air, Internet radio stations are accessible from anywhere in the world, as long as there is a connection to the Internet, as services are not transmitted through the air but are delivered over the World Wide Web. On this receiver you can select Internet radio stations by genre as well as by region. Depending on the Internet line conditions, the sound may not be smooth when playing Internet radio.
Problem solving

About list of Internet radio
The list of Internet radio stations on this receiver is created, edited, and managed by the vTuner database service exclusively for use with this receiver. For details about vTuner, see vTuner on page 112.

Saving and retrieving Internet radio stations
You can easily save and retrieve saved Internet radio stations. See Playing back your favorite songs on page 58 for more on this.
- To listen to Internet radio stations, you must have high-speed broadband Internet access. With a 56 K or ISDN modem, you may not enjoy the full benefits of Internet radio.
- The port number varies depending on the Internet radio station. Check the firewall settings.
- A list of Internet radio stations provided by the vTuner database service is subject to change or deletion without notice due to various reasons.
- Broadcasts may be stopped or interrupted depending on the Internet radio station. In this case, you cannot listen to a radio station selected from the list of Internet radio stations.

Registering broadcast stations not on the vTuner list from the special Pioneer site
With the receiver, broadcast stations not included on the list of station distributed by vTuner can be registered and played. Check the access code required for registration on the receiver, use this access code to access the special Pioneer Internet radio site and register the desired broadcast stations in your favorites. The address of the special Pioneer Internet radio site is:
http://www.radio-pioneer.com

1. Display the Internet Radio list screen.
   To display the Internet Radio list screen, perform step 1 at Playback with Network functions on page 56.

2. Use ⌁ / & to select ‘Help’, then press ENTER.

3. Use ⌁ / & to select ‘Get access code’, then press ENTER.
   The access code required for registration on the special Pioneer Internet radio site is displayed. Make a memo of this address.
   The following can be checked on the Help screen:
   - Get access code – The access code required for registration on the special Pioneer Internet radio site is displayed.
   - Show Your WebID/PW – After registering on the special Pioneer Internet radio site, the registered ID and password are displayed.
   - Reset Your WebID/PW – Resets all the information registered on the special Pioneer Internet radio site.
   When reset, all the registered broadcast stations are also cleared. If you want to listen to the same stations, re-register after resetting.

4. Access the special Pioneer Internet radio site from your computer and perform the registration process.
   http://www.radio-pioneer.com
   Access the above site and use the access code in step 3 to perform user registration, following the instructions on the screen.

5. Register the desired broadcast stations as your favorites, following the instructions on the computer’s screen.
   Both broadcast stations not on the vTuner list and stations on the vTuner list can be registered. In this case they are registered on the receiver as favorite broadcast stations and can be played.

About the Spotify audio stream playback function
Spotify is a music streaming distribution service managed and operated by Spotify Ltd. and distributing music over the Internet.
Spotify audio streams can be enjoyed using this unit and your smartphone or other mobile digital device.

Preparations (1) Installing the Spotify application on mobile digital devices and registering a Spotify Premium account

Important
- The Spotify application must be installed on mobile digital devices and you must have registered a Spotify Premium account (for a charge) in order to use the Spotify audio stream playback function on this unit. For registration procedures and other Spotify services, see the Spotify website:
  http://www.spotify.com/
  http://www.spotify.com/connect/
- For information on the countries and regions where Spotify services can be used, see the website below:
  http://www.spotify.com/
  Spotify functions may be changed without notice.
An Internet connection is required on the mobile digital device in order to use the Spotify application. Using the mobile telephone line for the Internet connection tends to lead to high packet communication charges, so we recommend subscribing to a fixed packet rate plan. For details, contact your mobile telephone operator.

Preparations (2) Connecting this unit to the network
- Connect this unit to the network and also to the Internet (page 31).
- Connect the mobile digital device by Wi-Fi to the wireless LAN router of the same network as the one to which this unit is connected. For instructions on connecting, see the operating instructions of the mobile digital device and the wireless LAN router.

In order to use the Spotify audio stream playback function from the Spotify application
To use the Spotify audio stream playback function, select this unit on the Spotify application. When Spotify audio streaming starts, this unit’s input automatically switches to Spotify.

CAUTION
Even if you are away from home, if you start Spotify audio streaming to play music on your mobile digital device and this unit is selected, the sound will be output from this unit. Depending on the volume level, the output may be loud, so be sure to check the audio output selection carefully before starting audio streaming. In addition, if you accidentally select this unit and play the sound on it, switch the audio output selection to the mobile digital device.

Notes
- A separate contract with/payment to an Internet service provider is required to use the Spotify audio stream playback function.
- This unit’s name is displayed as the playback device on the Spotify application. Also, this unit’s name can be changed at Friendly Name in the network settings.
- When this unit is selected with the Spotify application, the account information is registered on this unit as well. When disposing of this unit, reset this unit’s settings in order to delete the account information registered on this unit. For instructions on resetting, see this unit’s operating instructions.
Playing back audio files stored on components on the network
This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:
- PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
- PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)

Playing back your favorite songs
Up to 64 favorite tracks on the media server and/or Internet radio stations can be registered in the Favorites folder. Note that only the audio files stored on components on the network can be registered.

Registering and deleting audio files and Internet radio stations in and from the Favorites folder
1. Press NET repeatedly to select the INTERNET RADIO or MEDIA SERVER.
2. With the track or Internet radio station you want to register selected, press +Favorite. The selected song or Internet radio station is then registered in the Favorite.

Note
To delete tracks or Internet radio stations that have been registered, set the input toFavorites, select the track or station to be deleted, then press the CLR button.

About network playback
The network playback function of this unit uses the following technologies:

Windows Media Player
See Windows Media Player 11/Windows Media Player 12 on page 113 for more on this.

DLNA

Content playable over a network
- Even when encoded in a compatible format, some files may not play correctly.
- Movie or Photo files cannot be played back.
- There are cases where you cannot listen to an Internet radio station even if the station can be selected from a list of radio stations.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit. For more information check with the manufacturer of your server.

Disclaimer for Third Party Content
Access to content provided by third parties requires a high speed internet connection and may also require account registration and a paid subscription.
Third party content services may be changed, suspended, interrupted, or discontinued at any time without notice, and Pioneer disclaims any liability in connection with such occurrences.
Pioneer does not represent or warrant that content services will continue to be provided or available for a particular period of time, and any such warranty, express or implied, is disclaimed.

About playback behavior over a network
- Playback may stall when the PC is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 100BASE-TX connection between player and PC is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected PC and the setting of such software, network connection may be blocked.
Pioneer is not responsible for any malfunction of the player and/or the NETWORK features due to communication error/malfunctions associated with your network connection and/or your PC, or other connected equipment. Please contact your PC manufacturer or Internet service provider.

This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc. Microsoft, Windows, Windows Media and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

DLNA CERTIFIED™ Audio Player
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.
The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.5.
When a PC running DLNA server software or other DLNA compatible device is connected to this player, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

DLNA™, the DLNA Logo and DLNA CERTIFIED™ are trademarks, service marks, or certification marks of the Digital Living Network Alliance.
**About playable file formats**

The NETWORK feature of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats. Also, the compatibility of file formats varies depending on the type of server. Check with your server to ensure the compatibility of file formats supported by your server.

- Internet radio playback may be affected by the Internet communications environment, and in this case playback may not be possible even with the file formats listed here.
- With MP3, WAV, AAC, FLAC, AIF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.
- Gapless playback is not possible when the format is being converted (transcoded) by the server.
- Gapless playback is not possible in the DMR mode.
- When AAC or MP3 format is used, sound is reproduced with the minimum gap. If you are conscious about gaps, use WAV or FLAC files.

---

- "MPEG Layer-3 audio decoding technology licensed from Fraunhofer IIS and Thomson multimedia."
- 32 kHz, 176.4 kHz and 192 kHz support 2-channel audio sources only.
- When playing the 5.0 channel or 5.1 channel file in the sub zone, only the front left and right sound is played. Multichannel playback is only available with the main zone.
- Gapless playback is not possible with a 5.0-channel or 5.1-channel audio source.
- DSD files encoded using Windows Media Codec 9 may be playable but some parts of the specification are not supported; specifically, Pro, Lossless, Voice.
- Uncompressed FLAC files are not supported. Pioneer does not guarantee playback.
- DSD files cannot be played in the sub zone.
## Control with HDMI function

</tbody>
</table>
About the Control with HDMI function

Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

Important

- With Pioneer devices, the Control with HDMI functions are referred to as “KURO LINK”.
- You cannot use this function with components that do not support Control with HDMI.
- We only guarantee this receiver will work with Pioneer Control with HDMI-compatible components. However, we do not guarantee that all synchronized operations will work with components that support the Control with HDMI function.
- Use a High Speed HDMI cable when you want to use the Control with HDMI function. The Control with HDMI function may not work properly if a different type of HDMI cable is used.
- For details about concrete operations, settings, etc., refer to also the operating instructions for each component.

Making Control with HDMI connections

You can use synchronized operation for a connected TV and other components.

- Be sure to connect the TV’s audio cable to the audio input of this unit. When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV is input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 61).
- For details, see Connecting your TV and playback components on page 24.

Important

- When connecting this system or changing connections, be sure to switch the power off and disconnect the power cord from the wall socket. After completing all connections, connect the power cords to the wall socket.
- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during this process. The HDMI indicator in the front panel display blinks during this process, and you can turn on this receiver once it has stopped blinking. When you set the Control with HDMI to OFF, you can skip this process. For details about the Control with HDMI feature, see Control with HDMI function on page 61.
- To get the most out of this function, we recommend that you connect your HDMI component not to a TV but rather directly to the HDMI terminal on this receiver.
- The Control with HDMI function can be used with a TV connected to the HDMI OUT 1 terminal, but not with a TV connected to the HDMI OUT 2 terminal.

HDMI Setup

You must adjust the settings of this receiver as well as the connected Control with HDMI-compatible components in order to make use of the Control with HDMI function. For more information see the operating instructions for each component.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

2. Select ‘System Setup’, then press ENTER.

3. Select ‘HDMI Setup’, then press ENTER.

4. Select the ‘Control’ setting you want.

Choose whether to set this unit’s Control with HDMI function ON or OFF. You will need to set it to ON to use the Control with HDMI function.

- Choose using a component that does not support the Control with HDMI function, set this to OFF.
- ON – Enables the Control with HDMI function. Set Control Mode, ARC and PQLS in the subsequent setting items to the desired values.
- OFF – The Control with HDMI is disabled. The Control Mode, ARC and PQLS functions in the subsequent setting items cannot be used.

5. Select the ‘Control Mode’ setting you want.

Choose whether you want to enable synchronized operations.
- ON – Enabled for the synchronized operations.
- OFF – The synchronized operations disabled.

6. Select the ‘ARC’ setting you want.

When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT 1 terminal.

After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
- ON – The TV’s sound is input via the HDMI terminal.
- OFF – The TV’s sound is input from the Audio input terminals other than HDMI inputs.

7. Select the ‘PQLS’ setting you want.

Choose whether to set this unit’s PQLS function AUTO or OFF.

For details about PQLS function, see Setting the PQLS function on page 61.
- AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.
- OFF – PQLS is disabled.

8. Select the ‘Standby Through’ setting you want.

It is possible to transfer signals from an HDMI-connected player to the TV when this receiver’s power is on standby.

Select the HDMI input whose HDMI signal is to be input for through transfer when in the standby mode. When LAST is selected, the signal being input to the currently selected HDMI input is transferred. When OFF is selected, no HDMI input is transferred when in the standby mode. (However, when Control is set to ON, the HDMI signal is transferred through by the Control with HDMI function even when in the standby mode.)
- When anything other than OFF is set for this setting, the receiver’s HDMI input can be switched even when the receiver is in the standby mode. (Switch by pointing the remote control at the receiver and pressing the HDMI, BD, DVD or SAT/CBL button.)
- Setting to anything other than OFF increases power consumption in the standby mode.
- This setting can be used even with devices that are not compatible with the Control with HDMI function.
- The Standby Through function cannot be used with MHL-compatible devices.

9. When you’re finished, press HOME MENU.
Before using synchronization

Once you have finished all connections and settings, you must:

1. Put all components into standby mode.
2. Turn the power on for all components, with the power for the TV being turned on last.
3. Choose the HDMI input to which the TV is connected to this receiver, and see if video output from connected components displays properly on the screen or not.
4. Check whether the components connected to all HDMI inputs are properly displayed.

About synchronized operations

Important

- Synchronized operations are enabled when Control Mode is set to ON after setting Control in HDMI Setup to ON. For details, see HDMI Setup on page 61.
- The Control with HDMI-compatible component connected to the receiver operates in sync as described below.
  - From the menu screen of the Control with HDMI-compatible TV, set audio to be played through this receiver, and the receiver will switch to the synchronized amp mode.
  - When in the synchronized amp mode, you can adjust the receiver’s volume or mute the sound using the TV’s remote control.
  - When in the synchronized amp mode, the synchronized amp mode is canceled when the receiver’s power is turned off. To turn the synchronized amp mode back on, set audio to be played through the receiver from the TV’s menu screen, etc. This receiver will power up and switch to the synchronized amp mode.
  - When the synchronized amp mode is canceled, the receiver’s power turns off if you were viewing an HDMI input or a TV program on the TV.
  - When in the synchronized amp mode, the synchronized amp mode is canceled if an operation that produces sound from the TV is performed from the TV’s menu screen, etc.
  - When the TV’s power is set to standby, the receiver’s power is also set to standby. (Only when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV.)
  - The receiver’s input switches automatically when the Control with HDMI-compatible component is played.
  - The receiver’s input switches automatically when the TV’s input is switched.
  - The synchronized amp mode remains in effect even if the receiver’s input is switched to a component other than one connected by HDMI.

The operations below can also be used on Pioneer Control with HDMI-compatible TVs.

- When the receiver’s volume is adjusted or the sound is muted, the volume status is displayed on the TV’s screen.
- When the OSD language is switched on the TV, the receiver’s language setting also switches accordingly.

Setting the PQLS function

PQLS (Precision Quartz Lock System) is a digital audio signal transfer control technology using the Control with HDMI function. It offers higher-quality audio playback by controlling audio signals from the receiver to a PQLS compatible player, etc. This enables removing jitter that has a negative effect on the quality of the sound and is generated upon transmission.

- On players compatible with PQLS Bit-stream, PQLS always works for all sources.
- On players compatible with PQLS Multi Surround, PQLS works for all sources. Set the player’s audio output to Linear PCM.
- On players compatible with PQLS 2 ch Audio, PQLS only works when playing CDs.

Please refer to the operating instructions supplied with your player for more information.

This function is activated when Control is set to ON.

Tip

- The PQLS setting is set at PQLS in HDMI Setup on the HOME MENU, but the setting can also be switched with the remote control, as described below.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.
2. Use $ / $ to select ‘PQLS’.
3. Use $ / $ to select the PQLS setting.

The setting is displayed on the front panel display.

- AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.
- OFF – PQLS is disabled.

About Sound Retriever Link and Stream Smoother Link

These are automatic functions allowing you to output optimum audio and video signals from the receiver using the Control with HDMI function. When a player supporting the respective function is connected to the receiver by HDMI, the sound/picture is optimized on the receiver based on this information.

- Depending on the compressed audio/video file format, it may not be operated automatically.
- Also see the player’s operating instructions.

Sound Retriever Link

When playing a compressed audio file on the player, the file’s bitrate information is acquired using the Control with HDMI function, and the sound is optimized on the receiver based on this information.

To activate the Sound Retriever Link function, make the setting below.

1. Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON.
   See HDMI Setup on page 61.
2. Set the S.RTRV (Auto Sound Retriever) setting to ON.
   See Setting the Audio options on page 65.
**Stream Smoother Link**

Using the Control with HDMI function, the receiver automatically detects whether a compressed video file is being played on the player, and if so automatically activates the Stream Smoother function.

To activate the Stream Smoother Link function, make the setting below.

1. **Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON.**
   
   See [HDMI Setup](#) on page 61.

2. **Set the STREAM (Stream Smoother) setting to AUTO.**
   
   See [Setting the Video options](#) on page 67.

**Cautions on the Control with HDMI function**

- Connect the TV directly to this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.
- Only connect components (Blu-ray Disc player, etc.) you intend to use as a source to the HDMI input of this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.
- When the receiver’s Control is turned ON, even if the receiver’s power is in the standby mode, it is possible to output the audio and video signals from a player via HDMI to the TV without producing sound from the receiver, but only when a Control with HDMI-compatible component (Blu-ray Disc player, etc.) and compatible TV are connected. In this case, the receiver’s power turns on and the power and HDMI indicators light.
- If the Control setting is not set to OFF, the power consumption during standby will increase.

Setting the Audio options

There are a number of additional sound settings you can make using the AUDIO PARAMETER menu. The defaults, if not stated, are listed in bold.

Important
- Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.
2. Use $ or $ to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
3. Use $ or $ to set as necessary. See the table below for the options available for each setting.
4. Press RETURN to confirm and exit the menu.

Audio parameter menu

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
<th>Option(s)</th>
</tr>
</thead>
</table>
| MCACC (MCACC preset) | Selects your favorite MCACC preset memory when multiple preset memories are saved. When an MCACC preset memory has been renamed, the given name is displayed. | M1, MEMORY 1 to M6, MEMORY 6
 | EQ (Acoustic Calibration EQ) | Switches on/off the effects of EQ Pro.                                      | ON, OFF   |
| S-WAVE (Standing Wave) | Switches on/off the effects of Standing Wave Control.                        | ON, OFF   |
| PHASE (Phase Control) | Switches on/off the effects of Phase Control (page 53).                      | ON, OFF   |
| Phase C+ (Phase Control Plus) | For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function corrects for phase shifting on such discs. This function is especially effective when playing music. When AUTO is selected, not only the low range delay but also the polarity and correlation are detected to achieve the optimum effect. | AUTO/0 to 16 (ms)
 | DELAY (Sound Delay) | Some monitors have a slight delay when showing video, so the soundtrack will be slightly out of sync with the picture. By adding a bit of delay, you can adjust the sound to match the presentation of the video. | 0 to 800 (ms) |
| TONE (Tone Control) | Applies the treble and bass tone controls to a source, or bypasses them completely. This setting is only displayed when the listening mode is STEREO or SOUND RETRIEVER AIR. | BYPASS, ON |
| BASS                 | Adjusts the amount of bass.                                                 | -6 to +6 (dB) |
| TREBLE               | Adjusts the amount of treble.                                               | -6 to +6 (dB) |
| Digital Surround     | Helps to blend multi-channel audio (Dolby Digital, DTS, DTS-HD) from surround channels with those from other channels. | ON, OFF |
| Dialog Enhance       | Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. Adjusts the amount of bass. | 0 to 800 (ms) |
| Hi-bit24             | Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. | AUTO |
| PQLS (Precision Quartz Lock System) | Switches the PQLS function between AUTO and OFF. Using other functions with HDMI function, and the sound is | AUTO |
| DRC (Dynamic Range Control) | Adjusts the level of dynamic range for movie soundtracks optimized for Dolby Digital, DTS, Dolby Digital Plus, Dolby TrueHD, DTS-HD and DTS-HD Master Audio (you may need to use this feature when listening to surround sound at low volumes). | MAX, MID |
| Loud Mgmt (Loudness Management) | This is a setting of the post process function of the Dolby TrueHD decoder. By setting to OFF, you can enjoy higher sound quality. This can only be set when DRC is set to OFF and the input signal is a Dolby TrueHD signal. | ON, OFF |

Setting the Audio options

With the Auto Sound Retriever function, DSP processing is used to compensate for the loss of audio data upon compression, improving the sound’s sense of density and modulation. Also, when a player supporting the Sound Retriever Link function is connected to the receiver by HDMI, by setting this to ON, the bitrate information of the compressed audio file being played on the player is acquired using the Control with HDMI function, and the sound is optimized based on this information (Sound Retriever Link).

DNR (Digital Noise Reduction) | May improve the quality of sound in a noisy source (for example, video tape with lots of background noise) when switched on. This only has an effect with 2-channel signal inputs. This mode is effective for contents with a sampling frequency of 48 kHz or less. | OFF, ON |

Dialog Enhancement | Localizes dialog in the center channel to make it stand out from other background sounds in a TV or movie soundtrack. By moving from UP1 through UP2 and UP3 up to UP4, you can make the sound source seem to relocate upwards. | OFF, ON |

Hi-bit24 | Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. | AUTO |

PQLS (Precision Quartz Lock System) | Switches the PQLS function between AUTO and OFF. | AUTO, OFF |

Digital Surround | Helps to blend multi-channel audio (Dolby Digital, DTS, DTS-HD) from surround channels with those from other channels. | ON, OFF |

Dialog Enhance | Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. | AUTO |

### Using other functions

- **V.WIDE** (Virtual Wide)
  - When you're not using front wide speakers, selecting this mode allows you to hear a virtual front width channel through your front speakers.
  - **Option:** OFF, ON

- **V.DEPTH** (Virtual Depth)
  - When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence.
  - **Option:** OFF, MIN, MID, MAX

- **Set Center channel to wide channel.**
  - You can't use the Virtual Depth mode when the headphones are connected to this receiver or Stream Direct modes is selected.

### Additional Settings
- **LFE Attenuate**
  - The adjustment can be made only when **TONE** is set to **ON**.
  - The default value changes depending on the type of input.
- **HDMI Audio**
  - When **ON** is selected, the Sound Retriever effect is optimized based on the bit rate information of the contents input to the USB memory audio and INTERNET RADIO, MEDIA SERVER, FAVORITES (digital audio input) only to achieve high sound quality.
- **Panorama**
  - With the iPod/USB, INTERNET RADIO, MEDIA SERVER, FAVORITES or ADAPTER PORT input function, by default S.RTRV is set to **ON**.
  - When **ON** is selected, optimum correction of the audio signals input via the HDMI OUT (terminal is conducted with the HDMI ARC (Audio Return Channel) function, and the sound of digital TV broadcasts is produced with HD quality. This is valid when the input is set to **TV** and **ARC** in **HDMI Setup** is set to **ON**. (See **HDMI Setup** on page 61.)
  - If **ON** is selected, the Sound Retriever effect is optimized based on the bitrate information of the contents input to the HDMI OUT (terminal is conducted with the HDMI ARC (Audio Return Channel) function, and the sound of digital TV broadcasts is produced with HD quality. This is valid when the input is set to **TV** and **ARC** in **HDMI Setup** is set to **ON**. (See **HDMI Setup** on page 61.)
- **Lipsync**
  - Only when listening to 2-channel sources in Dolby Pro Logic IIx Music/Dolby Pro Logic II Music mode.
  - For more details about the lipsync feature of your display, contact the manufacturer directly.
- **Spotify Connect**
  - This feature is only available when the connected display supports the automatic audio/video synchronizing capability ("lipsync") for HDMI. If you find the automatically set delay time unsuitable, set **A.DELAY** to **OFF** and adjust the delay time manually.
- **USB memory audio and INTERNET RADIO**
  - This improves the continuity of the sound from the front channel to the surround channels.
- **S.RTRV**
  - This is only available when the connected display supports the automatic audio/video synchronizing capability ("lipsync") for HDMI. If you find the automatically set delay time unsuitable, set **A.DELAY** to **OFF** and adjust the delay time manually.
- **DIGITAL**
  - Displays the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence.
- **System**
  - This improves the continuity of the sound from the front channel to the surround channels.
- **Input function**
  - Only when listening to 2-channel sources in Dolby Pro Logic IIx Music/Dolby Pro Logic II Music mode.
  - Only when listening to 2-channel sources in NeoX CINEMA/MUSIC/GAME mode.
- **MANUAL**
  - This can be set when **MANUAL** is selected for **V.SPs**.
  - You can't use the Virtual Surround Back mode if the surround speakers are on and the **SB** setting is set to **NO** or if Front Bi-Amp, ZONE 2 or HDZONE is selected at Speaker System. It can also be used when **Speaker B** is selected at Speaker System and **SP.A+B** is set to **ON**.
  - **This mode is effective for contents with a sampling frequency of 48 kHz or less.**
  - This mode is effective for contents with a sampling frequency of 48 kHz or less.
  - When you're not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information.
  - When you're not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers.
- **A.DELAY**
  - This feature is only available when the connected display supports the automatic audio/video synchronizing capability ("lipsync") for HDMI. If you find the automatically set delay time unsuitable, set **A.DELAY** to **OFF** and adjust the delay time manually.
- **DIGITAL**
  - Displays the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence.
- **System**
  - This improves the continuity of the sound from the front channel to the surround channels.
- **Input function**
  - Only when listening to 2-channel sources in Dolby Pro Logic IIx Music/Dolby Pro Logic II Music mode.
  - Only when listening to 2-channel sources in NeoX CINEMA/MUSIC/GAME mode.
- **MANUAL**
  - This can be set when **MANUAL** is selected for **V.SPs**.
  - You can't use the Virtual Surround Back mode if the surround speakers are on and the **SB** setting is set to **NO** or if Front Bi-Amp, ZONE 2 or HDZONE is selected at Speaker System. It can also be used when **Speaker B** is selected at Speaker System and **SP.A+B** is set to **ON**.
  - **This mode is effective for contents with a sampling frequency of 48 kHz or less.**
  - This mode is effective for contents with a sampling frequency of 48 kHz or less.
  - This feature is only available when the connected display supports the automatic audio/video synchronizing capability ("lipsync") for HDMI. If you find the automatically set delay time unsuitable, set **A.DELAY** to **OFF** and adjust the delay time manually.
  - For more details about the lipsync feature of your display, contact the manufacturer directly.
  - **Auto delay**
  - Only when listening to 2-channel sources in Dolby Pro Logic IIx Music/Dolby Pro Logic II Music mode.
  - Only when listening to 2-channel sources in NeoX CINEMA/MUSIC/GAME mode.
Setting the Video options

There are a number of additional picture settings you can make using the VIDEO PARAMETER menu. The defaults, if not stated, are listed in bold.

**Important**
- When MAIN/HDZONE is set to HDZONE, the VIDEO PARAMETER menu setting only affects the HDMI OUT 1 terminal signal.
- Also, when HDZONE is set to ON, VIDEO PARAMETER cannot be set (does not work).
- Note that if an option cannot be selected on the VIDEO PARAMETER menu, it is unavailable due to the current source, setting and status of the receiver.
- All of the setting items can be set for each input function.
- However, with the audio only input function, VIDEO PARAMETER cannot be set.
- Also, when HDZONE is set to ON, VIDEO PARAMETER cannot be set (does not work).
- Setting items other than V.CONV can only be selected when V.CONV is set to ON.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press VIDEO P.
2. Use †/‡ to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
3. Use ₤/�� to set as necessary. See the table below for the options available for each setting.
4. Press RETURN to confirm and exit the menu.

</tbody>
</table>

- YNR: Reduces noise in the luminance (Y) signal.
- CNR: Reduces noise in the input’s color (C) signal.
- BNR: Reduces block noise (block-shaped distortion generated upon MPEG compression) in the picture.
- MNR: Reduces mosquito noise (distortion generated at the contours of the picture upon MPEG compression) in the picture.
### Setting | What it does | Option(s)
--- | --- | ---
**DETAIL**<br>(<d, e>) | Adjusts how sharp edges appear. | 0 to +8<br>Default: 0<br>(The image is only an example for checking the effect.)

**BRIGHT**<br>(Brightness)<br>(<d, e>) | Adjusts the overall brightness. | –6 to +6<br>Default: 0<br>(The image is only an example for checking the effect.)

**CONTRAST**<br>(<d, e>) | Adjusts the contrast between light and dark. | –6 to +6<br>Default: 0<br>(The image is only an example for checking the effect.)

**HUE**<br>(<d, e>) | Adjusts the red/green balance. | –6 to +6<br>Default: 0<br>(The image is only an example for checking the effect.)

**CHROMA**<br>(Chroma Level)<br>(<d, e>) | Adjusts saturation from dull to bright. | –6 to +6<br>Default: 0<br>(The image is only an example for checking the effect.)

**BLK SETUP**<br>(Black Setup)<br>(<f>) | Sets the black level according to the video input signal. Normally select 0. If the black level is too bright due to the combination with the connected monitor, select 7.5. | 0<br>7.5<br>(The image is only an example for checking the effect.)

**ASP**<br>(Aspect)<br>(<g>) | Specifies the aspect ratio when input signals are output at the HDMI output. Make your desired settings while checking each setting on your display (if the image doesn’t match your monitor type, cropping or black bands appear).<br>a. The default value changes depending on the type of input [page 72].<br>b. If the video picture deteriorates when this settings is switched ON, switch it OFF.<br>c. When connected to a video device using the component video input, set this setting to ON and watch with the HDMI output.<br>d. When set to a resolution with which the TV (monitor) is not compatible, no picture is output. Also, in some cases no picture will be output due to copyright protection signals. In this case, change the setting.<br>e. When AUTO is selected, the resolution is selected automatically according to the capacity of the TV (monitor) connected by HDMI. When PURE is selected, the signals are output with the same resolution as when input (see About the video converter on page 23).<br>f. When 1080/24p or 4K/24p is selected, the movement may be unnatural or the picture unclear, depending on the video signal being input. In this case, set the resolution to something other than 1080/24p or 4K/24p.<br>g. When PURE is selected and the input signal is 480i, the on-screen display cannot be displayed.<br>h. This setting have the effect only for pictures recorded in the interlaced scan format (480i/576i or 1080i signals).<br>i. Adjustment is not possible unless V.ADJ (Advanced Video Adjust) is set to MEMORY.<br>j. This setting is only displayed when the video signals below are being input: 480i, 576i, 480p, 576p, 720p, 1080i analog video signals<br>480i, 576i, 480p, 576p, 720p, 1080i, 1080p, 1080p24 HDMI video signals<br>k. If the image doesn’t match your monitor type, adjust the aspect ratio on the source component or on the monitor.<br>l. This setting is only displayed when 480i/p or 576i/p video signals are being input.
Switching the output (OUTPUT PARAMETER)
You can press OUT P., to switch the output of speaker terminals or HDMI terminals to be played.

Switching the speaker terminals
If you selected Normal(SB/FH), Normal(SB/FW) or Speaker B at Speaker system setting on page 87, you can switch between speakers using the OUT P. button. If you selected Front Bi-Amp, ZONE 2 or HDZONE, the button will simply switch your main speaker terminals on or off.

1 Press OUT P.,
   - You can perform the same operation by pressing SPEAKERS on the front panel.
2 Use †/‡ to select ‘SP’.
3 Use ‡/‡/‡/‡ to switch the speaker terminals to be played.
   As mentioned above, if you have selected Front Bi-Amp, ZONE 2 or HDZONE, the button will simply switch your main speaker terminal (A) on or off.
Press repeatedly to choose a speaker terminal option:

- **Normal(SB/FH)**
  - When you select Normal(SB/FH), you can select from:
    - **SP:SB/FH ON** – Surround back or front height channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output. The surround back and front height channels are switched automatically according to the audio input signal.
    - **SP:SB ON** – Surround back channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
    - **SP:FW ON** – Front height channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
    - **SP:OFF** – No sound is output from the speakers.

- **Normal(SB/FW)**
  - When you select Normal(SB/FW), you can select from:
    - **SP:SB/FW ON** – Surround back or front wide channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output. The surround back and front wide channels are switched automatically according to the audio input signal.
    - **SP:SB ON** – Surround back channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
    - **SP:FW ON** – Front wide channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
    - **SP:OFF** – No sound is output from the speakers.

- **Speaker B**
  - When you select Speaker B, you can select from:
    - **SP:A ON** – Sound is output from the A-speaker terminals (up to 7 channels (including surround back channels), depending on the source).
    - **SP:B ON** – Sound is output from the two speakers connected to the B-speaker terminals. Multichannel sources will not be heard.
    - **SP:A+B ON** – Sound is output from the A-speaker terminals (up to 5 channels, depending on the source), the two speakers connected to the B-speaker terminals, and the subwoofer. The sound from the B-speaker terminals will be the same as the sound from the A-speaker terminals (multichannel sources will be downmixed to 2 channels).
    - **SP:OFF** – No sound is output from the speakers.

**Notes**
- The subwoofer output depends on the settings you made in Manual speaker setup on page 82. However, if SP: B ON is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).
- All speaker systems (except Speaker B connections) are switched off when headphones are connected.

Switching the HDMI output
Set which terminal to use when outputting video and audio signals from the HDMI output terminals. The HDMI OUT 1 terminal is compatible with the Control with HDMI function.

1 Press OUT P.,
2 Use †/‡ to select ‘OUT 1/2’.
3 Use ‡/‡ to select the setting.
4 Adjust the volume using †/‡/⁄.
5 When you’re finished, press RETURN.

Changing the channel level while listening
Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1 Press CH LV..
2 Use †/‡ to select the channel you wish to adjust.
3 Adjust the volume using †/⁄.
4 When you’re finished, press RETURN.

Input Volume Absorber
This can be used to correct for the difference in volume between input sources.

1 Switch to the input whose volume you want to adjust.
2 Press CH LV..
3 Use †/‡ to select ‘ALL’.
4 Adjust the volume using †/⁄.
5 When you’re finished, press RETURN.
Using the MULTI-ZONE controls

The following steps use the front panel controls to adjust the sub zone volume and select sources. See ZONE 2 remote controls and HDZONE remote controls on page 70.

Important
- The settings must be changed at ZONE Setup in order to use the HDZONE function (page 90).

1. Press MULTI-ZONE ON/OFF on the front panel.
   Each press selects a MULTI-ZONE option:
   - ZONE 2 ON – Turns on the MULTI-ZONE feature for ZONE 2.
   - Z2&HDZONE ON – Turns on the MULTI-ZONE feature for ZONE 2 and the HDZONE.
   - HDZONE ON – Turns on the MULTI-ZONE feature for the HDZONE.
   - MULTI ZONE OFF – Switches the MULTI-ZONE feature off.
     The MULTI-ZONE indicator lights when the MULTI-ZONE control has been switched ON.

2. Press MULTI-ZONE CONTROL on the front panel to select the sub zone(s) you want.
   - When the receiver is on, make sure that any operations for the sub zone are done while ZONE and your selected sub zone(s) show in the display. If this is not showing, the front panel controls affect the main zone only.
   - If the receiver is in standby, the display is dimmed, and ZONE and your selected sub zone(s) continue to show in the display.

3. Use the INPUT SELECTOR dial to select the source for the sub zone.
   For example, ZONE 2 DVD sends the source connected to the DVD inputs to the sub room (ZONE 2).
   - If you select TUNER, you can use the tuner controls to select a preset station (see Saving station presets on page 47 if you’re unsure how to do this). The tuner cannot be tuned to more than one station at a time. Therefore, changing the station in one zone also changes the station in the other zone. Please be careful not to change stations when recording a radio broadcast.

4. Use the MASTER VOLUME dial to adjust the volume for the sub zone.
   When Speaker System is set to anything other than ZONE 2, the volume output from the receiver’s AUDIO ZONE 2 OUT terminals can be fixed to –40 dB or 0 dB and the volume can be adjusted from the connected amplifier. If you want to adjust the volume from the connected amplifier, see ZONE Setup on page 92.

5. When you’re finished, press MULTI-ZONE CONTROL again to return to the main zone controls.
   You can also press MULTI-ZONE ON/OFF on the front panel to switch off all output to the sub zone.
   - You won’t be able to switch the main zone off completely unless you’ve switched off the MULTI-ZONE control first.
   - If you don’t plan to use the MULTI-ZONE feature for a while, turn off the power in both the sub and main rooms so that this receiver is in standby.

Note
- When the network function or iPod/USB input is selected using HDZONE, the video converter function is disabled. For that reason, video connected with the video cable or component cable is not output from the HDMI terminal. Also, upscaling of the HDMI input video cannot be performed. To enable the video converter function, turn off HDZONE or set HDZONE to some other input.

ZONE 2 remote controls

Before operation, hold down Z2 on the remote control (for 1.5 seconds) until the remote control LED flashes one time.

The following table shows the possible ZONE 2 remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z2</td>
<td>Switches on/off power in the sub zone.</td>
</tr>
</tbody>
</table>

* Input function buttons: Use to select the input function directly (this may not work for some functions) in the sub zone.

VOLUME +/- | Use to set the listening volume in the sub zone. |

MUTE | Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound). |

* The volume cannot be adjusted on the receiver if Volume Level at ZONE Setup under ZONE Setup is set to –40 dB Fixed or 0 dB Fixed.

Note
- The Z3 button is not used with this unit.

HDZONE remote controls

Before operation, hold down HDZ on the remote control (for 1.5 seconds) until the remote control LED flashes one time.

The following table shows the possible HDZONE remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDZ</td>
<td>Switches on/off power in the HDZONE.</td>
</tr>
</tbody>
</table>

* Input function buttons: Use to select the input function in the HDZONE.

VOLUME +/- | Use to set the listening volume in the HDZONE. |

MUTE | Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound). |

* You can operate this only when Speaker System is set to HDZONE.
Network settings from a web browser

Network settings can be made using the browser on a computer connected to the same LAN as the receiver.

1. Press STANDBY/ON to switch on the receiver.
2. Turn on the computer’s power and launch the Internet browser.
3. Input the receiver’s IP address into the browser’s address input field. Access the IP address “http://(the receiver’s IP address)” from a web browser. You can display the IP address of the unit on the unit’s display by pressing the STATUS button on the remote control. When connected with the receiver, the AVNavigator menu screen appears in the browser.
4. On the AVNavigator menu screen, select Network Setup.
5. Select the item you want to set.

Using the sleep timer

The sleep timer switches the receiver into standby after a specified amount of time so you can fall asleep without worrying about the receiver being left on all night. Use the remote control to set the sleep timer.

- Press SLEEP repeatedly to set the sleep time.

![Sleep timer options](image)

- You can check the remaining sleep time at any time by pressing SLEEP once. Pressing repeatedly will cycle through the sleep options again.
- The sleep timer is valid for all zones. If any zone is on, the sleep timer continues functioning.

Dimming the display

You can choose between four brightness levels for the front panel display. Note that when selecting sources, the display automatically brightens for a few seconds. Turning off the display is effective for suppressing noise from the display that affects sound quality.

- Press DIMMER repeatedly to change the brightness of the front panel display.
- You can also choose to turn the display off. In this case, the FL OFF indicator lights.

Checking your system settings

Use the status display screen to check your current settings for features such as surround back channel processing and your current MCACC preset.

1. Press STATUS.
2. Use ↑/↓ to check the system setting.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Status Display Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP address</td>
<td></td>
</tr>
<tr>
<td>Audio format</td>
<td></td>
</tr>
<tr>
<td>Sampling frequency</td>
<td></td>
</tr>
<tr>
<td>MCACC memory</td>
<td></td>
</tr>
<tr>
<td>Auto phase control plus correction value</td>
<td></td>
</tr>
<tr>
<td>Input source to be played in ZONE 2</td>
<td></td>
</tr>
<tr>
<td>Input source to be played in HDZONE</td>
<td></td>
</tr>
<tr>
<td>HDMI output setting</td>
<td></td>
</tr>
<tr>
<td>Subzone to which HDZONE is output</td>
<td></td>
</tr>
</tbody>
</table>

- For some settings, some items are not displayed.

3. When you’re finished, press STATUS again to switch off the display.
Reseting the system

Use this procedure to reset all the receiver’s settings to the factory default. Use the front panel controls to do this. Set MULTI-ZONE to MULTI ZONE OFF.

- Disconnect the iPod and USB memory device from the receiver beforehand.
- Set the Control with HDMI to OFF (see HDMI Setup on page 61).

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press ENTER STANDBY/ON. The display shows RESET NO.
3. Select ‘RESET’ using PRESET, then press ENTER on the front panel. The display shows RESET? OK.
4. Press ENTER to confirm.

OK appears in the display to indicate that the receiver has been reset to the factory default settings.
- Note that all settings will be saved, even if the receiver is unplugged.

About the Remote Setup menu

The Remote Setup mode is set by pressing the number button while pressing RCU SETUP. The different items on the Remote Setup menu are described below. For their setting procedures, refer to the explanations for the respective items.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change RC mode</td>
<td>If you have multiple Pioneer receivers, amplifiers, etc., this setting can be used to prevent other units from operating simultaneously when the remote control unit is operated. See Operating multiple receivers on page 74.</td>
</tr>
<tr>
<td>Preset recall</td>
<td>Preset codes can be set for the various input functions. The remote control codes of a number of other devices (including products of other brands) are preset in the remote control to allow these devices to be operated. See Selecting preset codes directly on page 74.</td>
</tr>
<tr>
<td>Code learning</td>
<td>If the desired operations cannot be performed even though you have set the preset codes, the remote control signals of other devices can be learned directly. See Programming signals from other remote controls on page 75.</td>
</tr>
<tr>
<td>Erase learning</td>
<td>This function is used to erase remote control codes that have been learned. Codes learned for the different input functions can be erased individually. See Erasing one of the remote control button settings on page 75.</td>
</tr>
<tr>
<td>Reset function</td>
<td>This is a function for resetting preset codes that have been set. Key resetting can be done for individual input functions. See Erasing all learnt settings that are in one input function on page 76.</td>
</tr>
<tr>
<td>Operation mode switching time</td>
<td>You can set to automatically switch to AV amplifier operation mode when a certain period of time elapses after remote operation of each input function is finished. See Setting the switching time of AV amplifier operation mode on page 76.</td>
</tr>
<tr>
<td>All reset</td>
<td>This is a function for resetting all remote control unit settings you have made to the defaults set upon shipment from the factory. See Resetting the remote control settings on page 76.</td>
</tr>
</tbody>
</table>

Notes
- You can cancel or exit any of the steps by pressing RCU SETUP.
- After one minute of inactivity, the remote automatically exits the operation.

Operating multiple receivers

Up to four receivers can be operated discretely using this receiver’s remote control when using multiple receivers, provided they are of the same model as this receiver. The receiver to be operated is switched by inputting the preset code to set the remote control setting.
- Set the remote modes on the receivers before using this function (see Remote Control Mode Setup on page 74).

1. Press and hold RCU SETUP, then press ‘1’ for three seconds.
   - To cancel the preset setup mode press RCU SETUP.
2. Press the input function button for the receiver (“Receiver 1” to “Receiver 4”) you wish to operate.
   - For example, to operate “Receiver 2”, press ‘2’.
   - If the LED lights for one second, the setting has been successfully completed.
   - When the preset code is input, the LED flashes three times to indicate that the setting has failed.

Setting the remote to control other components

Most components can be assigned to one of the input function buttons (such as DVD or CD) using the component’s manufacturer preset code stored in the remote.

However, there are cases where only certain functions may be controllable after assigning the proper preset code, or the codes for the manufacturer in the remote control will not work for the model that you are using.

- With the TV buttons, the TV can be operated regardless of the input set for the remote control’s operation mode. When using one TV set, we recommend assigning the same TV’s preset codes to the TV INPUT button and the TV button. When using two TV sets, for better convenience assign the TV connected to the MONITOR OUT terminals to the TV INPUT button, the other TV to the TV button.
- Devices may be assigned to the following input function buttons.

Selecting preset codes directly

1. Press and hold RCU SETUP, then press ‘4’ for three seconds.
   - Release the button after the LED flashes once. The LED continues to flash.
   - To cancel the preset setup mode press RCU SETUP.
2. Press the input function button for the component you want to control.
   - To assign the preset codes of the TV to be operated with the TV function, press the TV INPUT button.
   - The LED of the remote control lights.
3. Use the number buttons to enter the 4-digit preset code.
   - See Preset code list on page 116.
   - If the LED lights for one second and continues to flash, the setting has been successfully completed.
   - When the preset code is fully input, the LED flashes three times to indicate that the setting has failed. If this happens, enter the 4-digit preset code again.
4. Repeat steps 2 through 3 for the other components you want to control.
   - To try out the remote control, switch the component on or off (into standby) by pressing SOURCE. If it doesn’t seem to work, select the next code from the list (if there is one).
5. Press RCU SETUP to exit the preset setup mode.
Controlling the rest of your system

Programming signals from other remote controls

If the preset code for your component is not available, or the available preset codes do not operate correctly, you can program signals from the remote control of another component. This can also be used to program additional operations (buttons not covered in the presets) after assigning a preset code.

The remote can store about 120 preset codes from other components (this has been tested with codes of Pioneer format only).

Certain buttons represent operations that cannot be learned from other remote controls. The buttons available are shown below:

1. Press and hold RCU SETUP, then press ‘2’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   - To "learn" codes at the TV buttons, proceed to step 3.
   - To cancel the preset setup mode press RCU SETUP.

2. Press the input function button for the component you want to control.
   The LED blinks once and flashes continuously.

3. Point the two remote controls towards each other, then press the button that will be doing the learning on this receiver’s remote control.
   The LED flashes once, then stops flashing, remaining lit.
   - The remote controls should be 3 cm apart.

4. Press the corresponding button on the other remote control that is sending (teaching) the signal to this receiver’s remote control.
   If the LED lights for one second and continues to flash, the setting has been successfully completed.
   - If the LED flashes for five seconds, it means the memory is full. See Erasing all learnt settings that are in one input function on page 76 to erase a programmed button you’re not using to free up more memory (note that some signals may take more memory than others).
   - Note that interference from TVs or other devices will sometimes result in the remote control learning the wrong signal.
   - Some commands from other remote controls cannot be learned, but in most cases the remotes just need to be moved closer together or farther apart.

5. To program additional signals for the current component repeat steps 3 and 4.
   To program signals for another component, exit and repeat steps 2 through 4.

6. Press RCU SETUP to exit the programming mode.

Erasing one of the remote control button settings

This erases one of the buttons you have programmed and restores the button to the factory default.

1. Press and hold RCU SETUP, then press ‘8’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   - To erase operations registered at the TV buttons, proceed to step 3.
   - To cancel the preset setup mode press RCU SETUP.

2. Press the input function button corresponding to the command to be erased.
   The LED flashes once.

3. Press and hold the button to be erased for three seconds.
   If the LED lights for one second, the erasing has been successfully completed.

4. Repeat step 3 to erase other buttons.

5. Press RCU SETUP to exit the erasing mode.
Erasing all learnt settings that are in one input function

This operation erases all the operational settings of other devices that have been programmed in one input function, and restores the factory default. This function is handy for erasing all data programmed for devices no longer being used.

1. Press and hold RCU SETUP, then press ‘9’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   • To cancel the preset setup mode press RCU SETUP.
2. Press and hold the input function button corresponding to the command to be erased for three seconds.
   To erase the operations registered at all the TV buttons, press the TV INPUT button for 3 seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Using All Zone Standby

The All Zone Standby can be used to turn all zones to OFF when the receiver’s power is switched to standby. Also, when using separate Pioneer amplifiers/receivers for the sub zones, they can also be set to standby simultaneously.

• In order to set the power of amplifiers/receivers connected to sub zones to the standby mode, the connected amplifiers/receivers must be installed or connected in such a way that they can receive remote control signals.
• The power of the amplifiers/receivers can be switched to standby with this operation even when using multiple Pioneer amplifiers/receivers and their Remote Control Mode have been changed.

1. Press ALL ZONE STBY.
   The LED continues to flash.
2. Press STANDBY/ON.
   The receiver’s power switches to standby and all zones are turned off.

Setting the switching time of AV amplifier operation mode

• Default setting: The AV amplifier operation mode is not switched automatically.
   After pressing SOURCE CONTROL to operate another device, you need to press MAIN RECEIVER to switch the mode to AV amplifier operation mode to operate this receiver.
   You can set to automatically switch to AV amplifier operation mode when a certain period of time elapses after remote operation of each input function is finished.

1. Press and hold RCU SETUP, then press ‘5’ for three seconds.
   The LED flashes once.
2. Press the number buttons of the time you wish to set.
   • 1 – The mode is not automatically switched to AV amplifier operation mode.
   • 2 – Switches in five minute.
   • 3 – Switches in three minute.
   • 4 – Switches in one minute.
   • 5 – Switches in 30 seconds.
3. Press RCU SETUP to exit the setup.

Resetting the remote control settings

Use this procedure to reset all the remote control’s settings to the factory default.
• When preset codes are set, all the signals learned in the input function buttons are cleared. This function is convenient when you want to reset some but not all of input function buttons.

1. Press and hold RCU SETUP, then press ‘0’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
2. Hold down the ENTER button for five seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Default preset codes

Manual MCACC setup ...................................................................................................................82
Checking MCACC Data ..................................................................................................................84
Data Management..........................................................................................................................85
Making receiver settings from the Advanced MCACC menu

The Advanced MCACC (Multi Channel ACOUSTIC Calibration) system was developed in Pioneer’s laboratories with the aim of making it possible for home users to perform adjustments of the same level as in a studio easily and with high precision. The acoustic characteristics of the listening environment are measured and the frequency response is calibrated accordingly to allow high precision, automatic analysis and optimal calibration of the sound field to bring it closer to a studio environment than ever before. Furthermore, while it was previously difficult to eliminate standing waves, this receiver is equipped with a standing wave control using a unique process to perform acoustic analysis and reduce their influence. This section describes how to calibrate the sound field automatically and fine-adjust the sound field data manually.

1. Press STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.
2. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   - A Graphical User Interface (GUI) screen appears on your TV. Use ➤ /  /  /  and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
     - Press HOME MENU at any time to exit the HOME MENU.
3. Select ‘Advanced MCACC’ from the HOME MENU, then press ENTER.
4. Select the setting you want to adjust.
   - Full Auto MCACC – See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 for a quick and effective automatic surround setup.
   - Auto MCACC – See Automatic MCACC (Expert) on page 80 for a more detailed MCACC setup.
   - Demo – No settings are saved and no errors occur. When the speakers are connected to this receiver, the test tone is output repeatedly. Press RETURN to cancel the test tone.

Automatic MCACC (Expert)

If your setup requires more detailed settings than those provided in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37, you can customize your setup options below. You can calibrate your system differently for up to six different MCACC presets, which are useful if you have different listening positions depending on the type of source (for example, watching movies from a sofa, or playing a video game close to the TV).

Important
- Make sure the microphone/speakers are not moved during the Auto MCACC Setup.
- The screen saver will automatically appear after five minutes of inactivity.

CAUTION
- The test tones used in the Auto MCACC Setup are output at high volume.

1. Select ‘Auto MCACC’ from the Advanced MCACC menu, then press ENTER.
   - If the Advanced MCACC screen is not displayed, refer to Making receiver settings from the Advanced MCACC menu on page 80.
3 Connect the microphone to the MCACC SETUP MIC jack on the front panel.  
Make sure there are no obstacles between the speakers and the microphone.

If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.
- It may not be possible to measure correctly if the microphone is placed on a table, sofa, etc.

4 When you’re finished setting the options, select START then press ENTER.

5 Follow the instructions on-screen.

6 Wait for the Auto MCACC Setup to finish outputting test tones.
A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this.
- With error messages (such as Too much ambient noise! or Check microphone.), select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup on page 38) and verifying the mic connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.
- Do not adjust the volume during the test tones. This may result in incorrect speaker settings.

7 If necessary, confirm the speaker configuration in the GUI screen.
The configuration shown on-screen should reflect the actual speakers you have. If no operations are performed for 10 seconds while the speaker configuration check screen is being displayed, the Auto MCACC Setup will resume automatically. In this case, you don’t need to select ‘OK’ and press ENTER in step 8.
- If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑ / ↓ to select the speaker and ← → to change the setting and continue.
- If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.

If Reverse Phase is displayed, the speaker’s wiring (+ and −) may be inverted. Check the speaker connections.
- If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly.
- After this, perform the Auto MCACC procedure again.
- If the connections were right, select GO NEXT and continue.

8 Make sure ‘OK’ is selected, then press ENTER.
A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings.
Again, try to be as quiet as possible while this is happening. It may take 3 to 7 minutes.
- If you selected a STAND.WAVE Multi-Point setup (in step 2), you will be asked to place the mic at the 2nd and 3rd reference points before finally placing it at your main listening position.

9 The Auto MCACC Setup procedure is completed and the Advanced MCACC menu reappears automatically.
The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the Manual MCACC setup menu (starting below) or Manual SP Setup menu (starting on page 87).
- Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 87.
- The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.
- If Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.
You can also choose to view the settings by selecting individual parameters from the MCACC Data Check screen (see Checking MCACC Data on page 84).
Press RETURN after you have finished checking each screen. When you’re finished, select RETURN to go back to the HOME MENU.
Be sure to disconnect the microphone from this receiver upon completion of the Auto MCACC Setup.
Manual MCACC setup

You can use the settings in the Manual MCACC setup menu to make detailed adjustments when you’re more familiar with the system. Before making these settings, you should have already completed Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37.

You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

CAUTION

The test tones used in the Manual MCACC setup are output at high volume.

Important

- Press the MCACC button while the pertinent setup screens are displayed to select MCACC presets.
- For some of the settings below, you’ll have to connect the setup microphone to the front panel and place it about ear level at your normal listening position. Press HOME MENU to display the HOME MENU before you connect the microphone to this receiver.
- See Problems when using the Auto MCACC Setup on page 38 for notes regarding high background noise levels and other possible interference.
- If you’re using a subwoofer, switch it on and turn up the volume to the middle position.

1 Select ‘Manual MCACC’ from the Advanced MCACC menu.

See Making receiver settings from the Advanced MCACC menu on page 80 if you’re not already at this screen.

2 Select the setting you want to adjust.

If you’re doing this for the first time, you might want to make these settings in order.

- Fine Channel Level – Make fine adjustments to the overall balance of your speaker system (see Fine Channel Level on page 83).
- Fine SP Distance – Make precise delay settings for your speaker system (see Fine Speaker Distance on page 83).
- Standing Wave – Control overly resonant low frequencies in your listening room (see Standing Wave on page 83).

The last two settings are specifically for customizing the parameters explained in Acoustic Calibration EQ Adjust on page 83.

- EQ Adjust – Manually adjust the frequency balance of your speaker system while listening to test tones (see Acoustic Calibration EQ Adjust on page 83).
- EQ Professional – Calibrate your system based on the direct sound coming from the speakers and make detailed settings according to your room’s reverb characteristics (see Acoustic Calibration EQ Professional on page 83).

3 Select each channel in turn and adjust the levels (+/–12.0 dB) as necessary.

Use / to adjust the volume of the speaker you selected to match the reference speaker. When it sounds like both tones are the same volume, press  on to confirm and continue to the next channel.

- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use /  to select it.

4 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Fine Speaker Distance

- Default setting: 3.00 m (all speakers)

For proper sound depth and separation with your system, it is necessary to add a slight bit of delay to some speakers so that all sounds will arrive at the listening position at the same time. You can adjust the distance of each speaker in 1 cm increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 87.

1 Select ‘Fine SP Distance’ from the Manual MCACC setup menu.

2 Adjust the distance of the left channel from the listening position.

3 Select each channel in turn and adjust the distance as necessary.

Use / to adjust the delay of the speaker you selected to match the reference speaker. Listen to the reference speaker and use it to measure the target channel. From the listening position, face the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span.

- If you can’t seem to achieve this by adjusting the distance setting, you may need to change the angle of your speakers very slightly.
- The subwoofer’s test tone differs in tone from other channels. Adjust so that the sound of the subwoofer can be heard distinctly. Note that when adjusting the subwoofer, depending on the low frequency response of your speaker, it may be difficult to hear the change even when the setting is increased or decreased or when the position of the speaker is changed. Note that it may be difficult to compare this tone with the other speakers in your setup (depending on the low frequency response of the reference speaker).

When it sounds like the delay settings are matched up, press  to confirm and continue to the next channel.

- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use /  to select it.

4 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Fine Channel Level

- Default setting: 0.0dB (all channels)

You can achieve better surround sound by properly adjusting the overall balance of your speaker system. You can adjust the Channel Level of each speaker in 0.5 dB increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 87.

1 Select ‘Fine Channel Level’ from the Manual MCACC setup menu.

The volume increases to the 0.0 dB reference level.

2 Adjust the level of the left channel.

This will be the reference speaker level, so you may want to keep the level around 0.0dB so that you’ll have plenty of room to adjust the other speaker levels.

- After pressing ENTER, test tones will be output.
Standing Wave

- Default setting: ON/ATT 0.0dB (all filters)

Acoustic standing waves occur when, under certain conditions, sound waves from your speaker system resonate mutually with sound waves reflected off the walls in your listening area. This can have a negative effect on the overall sound, especially at certain lower frequencies. Depending on speaker placement, your listening position, and ultimately the shape of your room, it results in an overly resonant ('boomy') sound. The Standing Wave Control uses filters to reduce the effect of overly resonant sounds in your listening area. During playback of a source, you can customize the filters used for Standing Wave Control for each of your MCACC presets.

- Standing Wave control filter settings cannot be changed during playback of sources using the HDMI connection.

1 Select 'Standing Wave' from the Manual MCACC setup menu.
2 Adjust the parameters for the Standing Wave Control.
   - Filter Channel – Select the channel to which you will apply the filter(s): MAIN (all except center channel and subwoofer), Center or SW (subwoofer).
   - TRIM (only available when the filter channel above is SW) – Adjust the subwoofer channel level (to compensate for the difference in output post-filter).
   - Freq / Q / ATT – These are the filter parameters where Freq represents the frequency you will be targeting and Q is the bandwidth (the higher the Q, the narrower the bandwidth, or range) of the attenuation (ATT, the amount of reduction to the targeted frequency).
3 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Acoustic Calibration EQ Adjust

- Default setting: ON/0.0dB (all channels/bands)

Acoustic Calibration Equalization is a kind of room equalizer for your speakers (excluding the subwoofer). It works by measuring the acoustic characteristics of your room and neutralizing the ambient characteristics that can color the original source material (providing a ‘flat’ equalization setting). If you’re not satisfied with the adjustment provided in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 or Automatic MCACC (Expert) on page 80, you can also adjust these settings manually to get a frequency balance that suits your tastes.

1 Select ‘EQ Adjust’ from the Manual MCACC setup menu.
2 Select the channel(s) you want and adjust to your liking.
   - Use / \ to select the channel.
   - Use \ / to select the frequency and \ / \ / to boost or cut the EQ. When you’re finished, go back to the top of the screen and press \ / \ < to return to Ch, then use \ / \ / to select the channel.
   - The OVER! indicator shows in the display if the frequency adjustment is too drastic and might distort. If this happens, bring the level down until OVER! disappears from the display.
3 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Notes

- Changing the frequency curve of one channel too drastically will affect the overall balance. If the speaker balance seems uneven, you can raise or lower channel levels using test tones with the TRIM feature. Use \ / \ / \ / to select TRIM, then use \ / \ / \ / to raise or lower the channel level for the current speaker.
- You cannot select 63Hz for the channel, which is set to SMALL using Speaker Setting.
- The frequencies that can be adjusted by the SW channel are 31Hz, 63Hz, 125Hz and 250Hz.
- Depending on the crossover frequency setting, some frequencies are less effective.

Acoustic Calibration EQ Professional

This setup minimizes the unwanted effects of room reverberation by allowing you to calibrate your system based on the direct sound coming from the speakers. Performing the Acoustic Calibration EQ Professional procedure is effective when the lower frequencies seem overly reverberant in your listening room (i.e. it sounds ‘boomy’) as shown at Type A below, or when different channels seem to exhibit different reverb characteristics as shown at Type B.

- Type A: Reverberance of high vs. low frequencies

- Type B: Reverb characteristics for different channels

Using Acoustic Calibration EQ Professional

1 Select ‘EQ Professional’, then press ENTER.
2 Select an option and press ENTER.
   - Reverb Measurement – Use this to measure the reverb characteristics before and after calibration.
   - Reverb View – You can check the reverb measurements made for specified frequency ranges in each channel.
     - If the Reverb View procedure is performed after the Reverb Measurement operation, depending on the standing wave control setting, differences may appear on the reverb graph. With the Auto MCACC function, the reverberations are measured with the standing waves controlled, so the reverb characteristics graph shows the characteristics with the effect of the standing waves eliminated. By contrast, the Reverb Measurement function measures the reverberations without controlling the standing waves, so the graph indicates the reverb characteristics including the effect of the standing waves. If you wish to check the reverb characteristics of the room itself (with the standing waves as such), we recommend using the Reverb Measurement function.
   - Advanced EQ Setup – Use this to select the time period that will be used for frequency adjustment and calibration, based on the reverb measurement of your listening area. Note that customizing system calibration using this setup will alter the settings you made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 or Automatic MCACC (Expert) on page 80 and is not necessary if you’re satisfied with these settings.
If you selected ‘Reverb Measurement’, select EQ ON or EQ OFF, and then START. The following options determine how the reverb characteristics of your listening area are displayed in Reverb View:

- **EQ OFF** – You will see the reverb characteristics of your listening area without the equalization performed by this receiver (before calibration).
- **EQ ON** – You will see the reverb characteristics of your listening area with the equalization performed by this receiver (after calibration). Note that the EQ response may not appear entirely flat due to adjustments necessary for your listening area.

   - The calibration corresponding to the currently selected MCACC preset will be used when EQ ON is selected. To use another MCACC preset, press MCACC to select the MCACC memory you want to store. After auto calibration with EQ Type: SYMMETRY (Full Auto MCACC, etc.), the graph for the inferred reverb characteristics can be displayed by selecting Reverb View. To display the actually measured reverb characteristics after EQ calibration, measure with EQ ON.

   When the reverb measurement is finished, you can select Reverb View to see the results on-screen. See Professional Calibration EQ graphical output on page 99 for troubleshooting information.

If you selected ‘Reverb View’, you can check the reverb characteristics for each channel. Press RETURN when you’re done.

The reverb characteristics are displayed when the Reverb Measurement measurements are conducted. Use上下 to select the channel, frequency and calibration setting you want to check. Use ← / → to go back and forth between the three. The reverb characteristics graph before and after EQ calibration can be displayed by selecting Calibration: Before / After. Note that the markers on the vertical axis indicate decibels in 2 dB steps.

If ‘Advanced EQ Setup’ is selected, select the MCACC memory to be stored, then enter the desired time setting for calibration, and then select START.

- To specify the place where the MCACC memory is to be stored, press MCACC to select the MCACC memory you want to store.

   Based on the reverb measurement above, you can choose the time period that will be used for the final frequency adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use the measurement results as a reference for your time setting. For an optimal system calibration based on the direct sound coming from the speakers, we recommend using the 30–50ms setting.

   Use上下 to select the setting. Use ← / → to switch between them. Select the setting from the following time periods (in milliseconds): 0–20ms, 20–40ms, 30–50ms, 40–60ms, 50–70ms and 60–80ms. This setting will be applied to all channels during calibration. When you’re finished, select START. It will take about 2 to 4 minutes for the calibration to finish. After the Acoustic Calibration Equalization is set, you are given the option to check the settings on-screen.

Checking MCACC Data

At the procedure of Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37, the procedure of Automatic MCACC (Expert) on page 80 or after fine-adjusting at Manual MCACC setup on page 82, you can check your calibrated settings using the GUI screen.

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

   A Graphical User Interface (GUI) screen appears on your TV. Use上下 /← / → / → / →和 ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2 Select ‘MCACC Data Check’ from the HOME MENU.

3 Select the setting you want to check.

   - **Speaker Setting** – Used to check the settings of the speaker systems. See Speaker Setting on page 84 for more on this.
   - **Channel Level** – Used to check the output level of the different speakers. See Channel Level on page 84 for more on this.
   - **Speaker Distance** – Used to check the distance to the different speakers. See Speaker Distance on page 84 for more on this.
   - **Standing Wave** – Used to check the standing wave control filter settings. See Standing Wave on page 85 for more on this.
   - **Acoustic Cal EQ** – Used to check the calibration values of the listening environment’s frequency response. See Acoustic Cal EQ on page 85 for more on this.

4 Press RETURN to go back to the MCACC Data Check menu, repeating steps 2 and 3 to check other settings.

5 When you’re finished, press RETURN.

   You will return to the HOME MENU.

Speaker Setting

Use this to display the speaker size and number of speakers. See Speaker Setting on page 84 for more on this.

1 Select ‘Speaker Setting’ from the MCACC Data Check menu.

2 Select the channel you want to check.

   Use上下 /← / → / → / → to select the channel. The corresponding channel on the layout diagram is highlighted.

Channel Level

Use this to display the level of the various channels. See Channel Level on page 88 for more on this.

1 Select ‘Channel Level’ from the MCACC Data Check menu.

2 When ‘MCACC’ is highlighted, use上下 /← / → to select the MCACC preset you want to check.

   The level of the various channels set at the selected MCACC preset is displayed. ‘—’ is displayed for channels that are not connected.
**Data Management**

This system allows you to store up to six MCACC presets, allowing you to calibrate your system for different listening positions (or frequency adjustments for the same listening position). This is useful for alternate settings to match the kind of source you're listening to and where you're sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

From this menu you can copy from one preset to another, name presets for easier identification and clear any settings of that preset.

- This can be done in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 or Automatic MCACC (Expert) on page 80, either of which you should have already completed.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

   A Graphical User Interface (GUI) screen appears on your TV. Use the 
   
   • Press RETURN to exit the current menu.

2. Select 'Data Management' from the HOME MENU.

3. Select the setting you want to adjust.
   - Memory Rename – Name your MCACC presets for easy identification (see Renaming MCACC presets on page 85).
   - MCACC Memory Copy – Copy settings from one MCACC preset to another (see Copying MCACC preset data on page 85).
   - MCACC Memory Clear – Clear any MCACC presets that you don’t want (see Clearing MCACC presets on page 85).

---

**Renaming MCACC presets**

If you have several different MCACC presets that you’re using, you may want to rename them for easier identification.

1. Select ‘Memory Rename’ from the Data Management setup menu.

2. Select the MCACC preset you want to rename, then select an appropriate preset name.

   Use the 

   • Press RETURN when you’re finished. You will return to the Data Management setup menu.

---

**Copying MCACC preset data**

If you want to manually adjust the Acoustic Calibration EQ (see Manual MCACC setup on page 82), we recommend copying your current settings to an unused MCACC preset. Instead of just a flat EQ curve, this will give you a reference point from which to start.

- The settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 or Automatic MCACC (Expert) on page 80.

1. Select ‘MCACC Memory Copy’ from the Data Management setup menu.

2. Select the setting you want to copy.
   - All Data – Copies all the settings of the selected MCACC preset memory.
   - Level & Distance – Copies only the channel level and speaker distance settings of the selected MCACC preset memory.

3. Select the MCACC preset you’ll be copying the settings ‘From’, then specify where you want to copy them ‘To’.

   Make sure you don’t overwrite an MCACC preset you’re currently using (this can’t be undone).

4. Select ‘OK’ to confirm and copy the settings.

   When MCACC Memory Copy? is displayed, select YES. If NO is selected, the memory is not copied.

   Completed! shows in the GUI screen to confirm the MCACC preset has been copied, then you automatically return to the Data Management setup menu.

---

**Clearing MCACC presets**

If you are no longer using one of the MCACC presets stored in memory, you can choose to clear the calibration settings of that preset.

1. Select ‘MCACC Memory Clear’ from the Data Management setup menu.

2. Select the MCACC preset you want to clear.

   Make sure you don’t clear an MCACC preset you’re currently using (this can’t be undone).

3. Select ‘OK’ to confirm and clear the preset.

   When MCACC Memory Clear? is displayed, select YES. If NO is selected, the memory is not cleared.

   Completed! shows in the GUI screen to confirm the MCACC preset has been cleared, then you automatically return to the Data Management setup menu.

Making receiver settings from the System Setup menu
The following section describes how to change the speaker-related settings manually and make various other settings (input selection, OSD language selection, etc.).
- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 89) and HDMI output (page 69) settings.

1 Press ⌚ STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.
2 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ◆ / ▼ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
- Press HOME MENU at any time to exit the current menu.
3 Select ‘System Setup’ from the HOME MENU, then press ENTER.
4 Select the setting you want to adjust.
- **Manual SP Setup** – Sets the type of connection used for surround back terminals and the size, number distance and overall balance of the connected speakers (see Manual speaker setup on page 87).
- **Input Setup** – Specifies what you've connected to the digital, HDMI and component video inputs (see The Input Setup menu on page 59).
- **OSD Language** – The GUI screen’s display language can be changed (see Changing the OSD display language (OSD language) on page 69).
- **Network Setup** – Conducts the setup necessary to connect this unit to the network (see Network Setup menu on page 39).
- **HDMI Setup** – Synchronizes this receiver with your Pioneer component supporting Control with HDMI (page 84).
- **MHL Setup** – Changes the settings related to MHL (see MHL Setup on page 90).
- **Other Setup** – Makes customized settings to reflect how you are using the receiver (see The Other Setup menu on page 59).

Manual speaker setup
This receiver allows you to make detailed settings to optimize the surround sound performance. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers). These settings are designed to customize your system, but if you’re satisfied with the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37, it isn’t necessary to make all of these settings.

**CAUTION**
- The test tones used in the Manual SP Setup are output at high volume.
1 Select ‘Manual SP Setup’, then press ENTER.
See Making receiver settings from the System Setup menu on page 87 if you’re not already at this screen.
2 Select the setting you want to adjust.
If you are doing this for the first time, you may want to adjust these settings in order:
- **Speaker System** – Specifies how you are using your surround back speaker terminals and B speaker terminals (page 87).
- **Speaker Setting** – Specifies the size and number of speakers you’ve connected (page 87).
- **Channel Level** – Adjusts the overall balance of your speaker system (page 88).
- **Speaker Distance** – Specifies the distance of your speakers from the listening position (page 89).
- **X-Curve** – Adjusts the tonal balance of your speaker system for movie soundtracks (page 88).
3 Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Speaker system setting
- **Default setting: Normal(SB/FH)**
There are several ways you can use the speaker terminals with this receiver. In addition to a normal home theater setup where they are used for the front height speakers or front wide speakers, they can be used for bi-amping the front speakers or as an independent speaker system in another room.
1 Select ‘Speaker System’ from the Manual SP Setup menu.
See Making receiver settings from the System Setup menu on page 87 if you’re not already at this screen.
2 Select the speaker system setting.
- **Normal(SB/FH)** – Select for normal home theater use with front height speakers in your main (speaker system A) setup.
- **Normal(SB/FW)** – Select for normal home theater use with front wide speakers in your main (speaker system A) setup.
- **Speaker B** – Select to use the B speaker terminals to listen to stereo playback in another room (see Switching the speaker terminals on page 69).
- **Front Bi-Amp** – Select this setting if you’re bi-amping your front speakers (see Bi-amping your speakers on page 21).
- **ZONE 2** – Select to use the surround back speaker terminals for an independent system in another zone (see Using the MULTI-ZONE controls on page 70).
- **HDZONE** – Select to use the surround back speaker terminals for an independent system in HDZONE (see Using the MULTI-ZONE controls on page 70).
3 If you selected Normal(SB/FH), Normal(SB/FW), or Speaker B in Step 2, select the placement of the surround speakers.
In a 7.1-channel surround system with surround speakers placed directly at the sides of the listening position, the surround sound of 5.1-channel sources is heard from the side. This function mixes the sound of the surround speakers with the surround back speakers so that the surround sound is heard from diagonally to the rear as it should be.
Depending on the positions of the speakers and the sound source, in some cases it may not be possible to achieve good results. In this case, set the setting to ON SIDE or IN REAR.
- **ON SIDE** – Select when the surround speakers is positioned right beside you.
- **IN REAR** – Select when the surround speaker is positioned obliquely behind you.
4 When ‘Setting Change?’ is displayed, select Yes.
If No is selected, the setting is not changed.
You will return to the Manual SP Setup menu.

Speaker Setting
Use this setting to specify your speaker configuration (size, number of speakers and crossover frequency). It is a good idea to make sure that the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 are correct. Note that this setting applies to all MCACC presets, and cannot be set independently.
1 Select ‘Speaker Setting’ from the Manual SP Setup menu.
2 Choose the set of speakers that you want to set, then select a speaker size.
Use ◆ ◆ ◆ to select the size (and number) of each of the following speakers:
If you select SMALL round, surround back, front height and front wide speakers can't be set to YES.

When you're finished, press RETURN.

Frequencies below this point will be sent to the subwoofer (or route all the bass sounds to the subwoofer). If you didn't connect surround back speakers choose NO (the front wide channel is sent to the front speakers). You can adjust this setting only when Speaker System setting is Normal(SB/FH).

If the surround speakers are set to NO, this setting will automatically be set to NO.

If you have a subwoofer and like lots of bass, it may seem logical to select NO. If your front speakers are set to LARGE, the setting here will not affect the setting for the front speakers.

You can adjust the distance of each speaker in 0.01 m increments.

For effective surround sound, you need to specify the distance of your speakers from the listening position. The receiver can then add the proper delay needed for effective surround sound.

You can adjust the distance of each speaker in 0.01 m increments.

For best surround sound, make sure the surround back speakers are the same distance from the listening position.

Most soundtracks mixed for cinema sound too bright when played back in large rooms. The X-Curve setting acts as a kind of re-equalization for home theater listening, and restores proper tonal balance of movie soundtracks.

Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1. Select 'Channel Level' from the Manual SP Setup menu.
2. Adjust the level of each channel using ←/→. Use ↑/↓ to switch speakers.
3. When you're finished, press RETURN.

Channel Level

Speaker Distance

X-Curve

<table>
<thead>
<tr>
<th>Room size (m²)</th>
<th>X-Curve (dB/oct)</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤36</td>
<td>-0.5</td>
</tr>
<tr>
<td>36 ≤</td>
<td>-1.0</td>
</tr>
<tr>
<td>60 ≤</td>
<td>-1.5</td>
</tr>
<tr>
<td>72 ≤</td>
<td>-2.0</td>
</tr>
<tr>
<td>100 ≤</td>
<td>-2.5</td>
</tr>
<tr>
<td>1000</td>
<td>-3.0</td>
</tr>
</tbody>
</table>

If you select OFF, the frequency curve will be flat and the X-Curve has no effect.

When you’re finished, press RETURN.
Network Setup menu

Make the settings for connecting the receiver to the Internet and using the network functions.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use \( \uparrow \downarrow \leftrightarrow \rightarrow \) and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select 'System Setup' from the HOME MENU.

3. Select 'Network Setup' from the System Setup menu.

4. Select the setting you want to adjust.
   - IP Address, Proxy – Sets up the IP address/Proxy of this receiver (page 89).
   - Network Standby – Even when the unit is in standby mode, it is possible to turn on the power of the unit from iControlAV5 (page 89).
   - Friendly Name – The name of the receiver displayed on a computer or other device connected to the network can be changed (page 89).
   - Parental Lock – Restricts usage of network functions (page 90).

IP address/Proxy setting

In case the router connected to the LAN terminal on this receiver is a broadband router (with a built-in DHCP server function), simply turn on the DHCP server function, and you will not need to set up the network manually. You must set up the network as described below only when you have connected this receiver to a broadband router without a DHCP server function. Before you set up the network, consult with your ISP or the network manager for the required settings. It is advised that you also refer to the operation manual supplied with your network component.

- In case you need to make changes to the network configuration without the DHCP server function, make the corresponding changes to the network settings of this receiver.

IP Address

The IP address to be entered must be defined within the following ranges. If the IP address defined is beyond the following ranges, you cannot play back audio files stored on components on the network or listen to Internet radio stations.

Class A: 10.0.0.1 to 10.255.255.254
Class B: 172.16.0.1 to 172.31.255.254
Class C: 192.168.0.1 to 192.168.255.254

Subnet Mask

In case an xDSL modem or a terminal adapter is directly connected to this receiver, enter the subnet mask provided by your ISP on paper. In most cases, enter 255.255.255.0.

Default Gateway

In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

Primary DNS Server/Secondary DNS Server

In case there is only one DNS server address provided by your ISP on paper, enter it in the 'Primary DNS Server' field. In case there are more than two DNS server addresses, enter 'Secondary DNS Server' in the other DNS server address field.

Proxy Hostname/Proxy Port

This setting is required when you connect this receiver to the Internet via a proxy server. Enter the IP address of your proxy server in the 'Proxy Hostname' field. Also, enter the port number of your proxy server in the 'Proxy Port' field.

1. Select 'IP Address, Proxy' from the Network Setup menu.
2. Select the DHCP setting you want.

3. Enter the IP Address, Subnet Mask, Default Gateway, Primary DNS Server and Secondary DNS Server.

Proxy Hostname/Proxy Port

This setting is required when you connect this receiver to the Internet via a proxy server. Enter the IP address of your proxy server in the 'Proxy Hostname' field. Also, enter the port number of your proxy server in the 'Proxy Port' field.

1. Select 'IP Address, Proxy' from the Network Setup menu.
2. Select the DHCP setting you want.

3. Enter the IP Address, Subnet Mask, Default Gateway, Primary DNS Server and Secondary DNS Server.

Network Standby

Set so that the iControlAV5 function connected to the same LAN with the receiver can be used even while the unit is in standby status.

1. Select 'Network Standby' from the Network Setup menu.
2. Specify whether the Network Standby is ON or OFF.
   - ON – Even when the unit is in standby mode, it is possible to turn on the power of the unit from the device iControlAV5 that is connected to the network.
   - OFF – The iControlAV5 function is not available while the receiver is in standby mode (power consumption during standby can be suppressed).

Friendly Name

1. Select 'Friendly Name' from the Network Setup menu.
2. Select 'Edit Name' then select 'Rename'.

3. Input the name you want.
   Use \( \uparrow \downarrow \leftrightarrow \rightarrow \) to select a character, \( \uparrow \downarrow \leftrightarrow \rightarrow \) to set the position, and ENTER to confirm your selection.

Insert the name you want.
Parental Lock
Set restrictions for using Internet services. Also set the password accompanying the usage restrictions.

- Upon shipment from the factory, the password is set to “0000”.

Important
When the INTERNET RADIO or FAVORITES input is selected, the setting made here cannot be reflected.

1. Select ‘Parental Lock’ from the Network Setup menu.
2. Input the password.
3. Specify whether to turn Parental Lock on or off.
   - OFF – Internet services are not restricted.
   - ON – Internet services are restricted.
4. If you want to change the password, select Change Password.
   In this case, the procedure returns to step 2.

Checking the Network Information
The setting status of the following network-related items can be checked.

- IP Address – Check the IP address of this receiver.
- MAC Address – Check the MAC address of this receiver.
- Friendly Name – Friendly Name on page 89.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2. Select ‘Network Information’ from the HOME MENU.
3. Select ‘Network Information’, then press ENTER.

MHL Setup
Select whether or not to switch the input automatically to the MHL input when an MHL-compatible device is connected.

- Default setting: ON

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ , ← , → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
   - Press HOME MENU at any time to exit the HOME MENU.
2. Select ‘System Setup’ from the HOME MENU, then press ENTER.
3. Select ‘MHL Setup’ from the System Setup menu.
4. Select the ‘Auto input switching’ from the MHL Setup menu.
5. Use ← / → to select the setting.
   - OFF – Does not automatically switch to MHL input.
   - ON – Automatically switches to MHL input.
6. Select ‘OK’, then press ENTER.

Notes
- This is only valid for MHL-compatible devices supporting this function.
- When the power is on, the MHL-compatible device is charged. (This receiver supports charging of devices up to 0.9 A.)

The Other Setup menu
The Other Setup menu is where you can make customized settings to reflect how you are using the receiver.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ , ← , → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2. Select ‘System Setup’ from the HOME MENU.
3. Select ‘Other Setup’, then press ENTER.
4. Select the setting you want to adjust.
   If you are doing this for the first time, you may want to adjust these settings in order:
   - Auto Power Down – Sets the power to turn off automatically when the receiver is not being used (page 90)
   - Volume Setup – Sets up the volume-related operations of this receiver (page 91)
   - Remote Control Mode Setup – Sets this receiver’s remote control mode (page 91)
   - Software Update – Use to update the receiver’s software and check the version (page 91)
   - ZONE Setup – Use to make the sub zone-related settings (page 92)
   - On Screen Display Setup – Sets whether or not to display the status on the display when the receiver is operated (page 90)
   - Play ZONE Setup – Select the zone for playing the audio contents of devices in the home network (page 92)
5. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Auto Power Down
The power can be set to turn off automatically if no operation has been performed for a specific amount of time with no audio or video signals being input to the receiver. When using ZONE 2 or HDZONE, the ZONE 2 or HDZONE power can also be set to turn off, but for ZONE 2 or HDZONE the power turns off automatically after the amount of time set here even if signals are being input or operations have been performed.

Different times can be set for the main zone, ZONE 2 and HDZONE.

1. Select ‘Auto Power Down’ from the Other Setup menu.
2. Select the zone you want to set and set the time after which the power turns off.
   - MAIN – The time can be selected from among “15 min”, “30 min”, “60 min” and “OFF”. The power turns off after there has been no signal and no operation for the selected time.
   - ZONE 2 – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.
   - HDZONE – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.

Note
Depending on the connected devices, the Auto Power Down function may not work properly due to excessive noise or other reasons.
Volume Setup
You can set the maximum volume of this receiver or specify what the volume level will be when the power is turned on.
1 Select ‘Volume Setup’ from the Other Setup menu.
2 Select the Power ON Level setting you want.
The volume can be set so that it is always set to the same level when the receiver’s power is turned on.
• LAST (default) – When the power is turned on, the volume is set to the same level as when the power was last turned off.
• –∞ – When the power is turned on, the volume is set to minimum level.
• –80.0dB /–12.0dB – Specify the volume to be set when the power is turned on, in steps of 0.5 dB.
   It is not possible to set a volume level greater than the value specified at Volume Limit setup (see below).
3 Select the Volume Limit setting you want.
Use this function to limit the maximum volume. The volume cannot be increased above the level set here, even by operating VOLUME button (or the dial on the front panel).
• OFF (default) – The maximum volume is not limited.
• –20.0dB /–15.0dB /–10.0dB /–5.0dB /0.0dB – The maximum volume is limited to the value set here.
4 Select the Mute Level setting you want.
This sets how much the volume is to be turned down when MUTE is pressed.
• FULL (default) – No sound.
• –40.0dB /–20.0dB – The volume will be turned down to the level specified here.
5 When you’re finished, press RETURN.
You will return to the Other Setup menu.

Remote Control Mode Setup
• Default setting: 1
This sets this receiver’s remote control mode to prevent erroneous operation when multiple units of the receiver are being used.
1 Select ‘Remote Control Mode Setup’ from the Other Setup menu.
2 Select the Remote Control Mode setting you want.
3 Select ‘OK’ to change the remote control mode.
4 Follow the instructions on the screen to change the remote control’s setting.
See Operating multiple receivers on page 74.
5 When you’re finished, press RETURN.
You will return to the Other Setup menu.

Software Update
Use this procedure to update the receiver’s software and check the version. There are two ways to update: via the Internet and via a USB memory device.
• If an update file is provided on the Pioneer website, download it onto your computer. When downloading an update file from the Pioneer website onto your computer, the file will be in ZIP format. Unzip the ZIP file before saving it on the USB memory device. If there are any old downloaded files or downloaded files for other models on the USB memory device, delete them.
   — http://www.pioneer.com.sg (for Southeast Asia)
   — http://www.pioneer-india.in (for India)
   — http://www.pioneerhongkong.com.hk (for Hong Kong)
• If an update file does not exist in the Pioneer’s website, updating the software for the receiver is not necessary.

Important
• DO NOT unplug the power cord during updating.
• When updating via the Internet, do not disconnect the LAN cable. When updating via a USB memory device, do not disconnect the USB memory device.
• If updating is interrupted before it is completed, start updating over from the beginning.
• The receiver’s settings may be reset when the software is updated. Information on the models for which the settings are reset is provided on the Pioneer website. Check the website before updating.
1 Select ‘Software Update’ from the Other Setup menu.
2 Select the update procedure.
• Update via Internet – The receiver checks whether updatable software is available via the Internet.
• Update via USB Memory – The receiver checks whether the USB memory device inserted into the USB port on the receiver’s front panel contains updatable software.
   “Accessing” is displayed and the update file is checked. Wait a while.
3 Check on the screen whether or not an update file was found.
   If ‘New version found.’ is displayed, the update file has been found. The version number and updating time are displayed.
   If ‘This is the latest version. There is no need to update.’ is displayed, no update file has been found.
4 To update, select OK.
The updating screen appears and updating is performed.
• The power turns off automatically once updating is completed.

Software Update messages

<table>

</tbody>
</table>
ZONE Setup
Switches the sub-zone setting.
1 Select ‘ZONE Setup’ from the Other Setup menu.
2 Select ‘MAIN/HDZONE’, then press ENTER.
3 Set the usage of the HDMI OUT 2 terminal.
   • MAIN: Select this to output the same input source as in the main zone.
     After setting this to MAIN, exit the home menu, then press OUT P, and select the terminal for HDMI output (page 69).
   • HDZONE: Use the HDMI output’s multizone function (HDZONE) to output an input source different from the one in the main zone (page 70).
4 Select ‘OK’, then press ENTER.

ZONE 2 setup
When making multi-zone connections using the AUDIO ZONE 2 OUT terminals and performing playback in Zone 2, you can set whether to adjust the Zone 2 volume on the receiver or to fix it to a specific volume (–40 dB Fixed or 0 dB Fixed). This is set to Variable upon shipment from the factory, allowing the volume to be adjusted on the receiver. If you would like to adjust the volume from the connected amplifier, make the setting below.
   • This setting is not possible if multi-zone settings have been made using the speaker terminals and Speaker System is set to anything other than ZONE 2. In this case, adjust the volume for the sub zones on the receiver.
   • CAUTION
     • Note that when Volume Level is set to 0 dB Fixed, the audio output from the AUDIO ZONE 2 OUT terminals is set to the maximum. Also, depending on the volume setting on the connected amplifier, large volumes may be produced even when Volume Level is set to –40 dB Fixed.
1 Select ‘ZONE Setup’ from the Other Setup menu.
2 Select ‘ZONE 2’, then press ENTER.
3 Select the Volume Level setting you want.
   • Variable (default) – The Zone 2 volume is adjusted from the receiver.
   • –40 dB Fixed/0 dB Fixed – The Zone 2 volume level output from the receiver is fixed to the value set here.
4 When you’re finished, press RETURN.
   You will return to the Other Setup menu.

On Screen Display Setup
When the receiver is operated, its status (the input name, listening mode, etc.) is displayed superimposed over the video output on the display. This status display can be turned off by switching this setting to OFF. The setting can be made for the main zone and HDZONE, respectively.
   • Default: ON (both the main zone and HDZONE)
1 Select ‘On Screen Display Setup’ from the Other Setup menu.
2 Select and set the main zone or HDZONE for which you wish to change the setting.
3 Select the On Screen Display setting you want.
4 When you’re finished, press RETURN.
   You will return to the Other Setup menu.

Notes
• The on-screen display is only displayed for video output from the HDMI terminal.
• When the video input signal is a 3D signal, the on-screen display may not be displayed.
• The size of the characters displayed differs according to the output resolution.

Play ZONE Setup
Select the zone for playing the audio contents of devices in the home network when using in the DMR mode.
   • For playable DLNA-compatible network devices, see page 55.
1 Select ‘Play ZONE Setup’ from the Other Setup menu.
2 Select the zone in which you want to play the audio contents.
3 When you’re finished, press RETURN.
   You will return to the Other Setup menu.

Notes
• If another zone is on, it may not be possible to play the audio contents. In this case, turn the other zone off, then play the audio contents.
• MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 92).
Making network settings using Safari

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address "http://(the receiver’s IP address)" from Safari.
3. On the AVNavigator menu screen, select Network Setup.
4. Click IP, Proxy Setting.
5. Setup the network settings manually and then press Apply.

Note
This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

Using Safari to set a friendly name

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address "http://(the receiver’s IP address)" from Safari.
3. On the AVNavigator menu screen, select Network Setup.
4. Click Friendly Name.
5. Input a friendly name, then press Apply.

Note
This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.
Using Safari to update the firmware

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address "http://[the receiver's IP address]" from Safari.
3. On the AVNavigator menu screen, select Network Setup.
4. Click Firmware Update.

5. Press Start.
   The firmware update prepare screen is displayed. If the screen does not switch automatically, click Click here.

6. Browse the latest firmware on your computer (a) and then press Upload (b).
   Firmware files have the extension "fw". Select a file with the extension "fw".
   The confirmation screen is displayed. If you continue the firmware update, press OK. Once the firmware update process starts, you cannot stop it. Wait until the file is uploaded (about one minute may be required depending on your LAN connection environment).

7. The firmware upload status screen is displayed.
   “The upload process finished successfully.” will be shown when the update is completed.
   Once updating is completed, the receiver’s power automatically turns off.

Note
This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

Troubleshooting

Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest Pioneer authorized independent service company to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.
- If the problem is not solved after the troubleshooting below, if the screen freezes unexpectedly or if the buttons on the remote control or front panel stop working completely, do the following:
  - Press the STANDBY/ON button on the front panel to turn off the power, then turn the power back on.
  - If this does not solve the problem, turn off the power again, then press and hold the STANDBY/ON button on the front panel for at least five seconds. (The power turns on, then turns off after five seconds.)
  - If the power cannot be turned off, press and hold the STANDBY/ON on the front panel for over five seconds. The power will turn off. In this case, the various settings made on the receiver may be cleared. (However, settings made when the power was turned off normally are not cleared.)

### Power

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power does not turn on.</td>
<td>Make sure that the power cord is plugged in to an active power outlet.</td>
</tr>
<tr>
<td></td>
<td>Try disconnecting from the power outlet, then plugging back in.</td>
</tr>
<tr>
<td>Power cannot be turned off.</td>
<td>Press the ZONE 2 button on the remote control for 1.5 seconds and then press the STANDBY/ON button to turn off the power.</td>
</tr>
<tr>
<td>Power cannot be turned off.</td>
<td>Press the ZONE 2 button on the remote control for 1.5 seconds and then press the STANDBY/ON button to turn off the power.</td>
</tr>
<tr>
<td>The receiver suddenly switches off or the iPod iPhone indicator blinks.</td>
<td>Check that there are no loose strands of speaker wire touching the rear panel or another set of wires, if so, re-attach the speaker wires, making sure there are no stray strands.</td>
</tr>
<tr>
<td></td>
<td>The receiver may have a serious problem. Disconnect from the power and call a Pioneer authorized independent service company.</td>
</tr>
<tr>
<td>During loud playback the power suddenly switches off.</td>
<td>Turn down the volume.</td>
</tr>
<tr>
<td></td>
<td>Lower the 63 Hz and 125 Hz equalizer levels in the Manual MCACC setup on page 46.</td>
</tr>
<tr>
<td></td>
<td>Switch on the digital safety feature. While holding down ENTER on the front panel, press STANDBY/ON to set this receiver to the standby mode. Use TUNE + / - to select D.SAFETY &lt;OFF&gt;, and then use PRESET + / - to select 1 or 2 (select D.SAFETY &lt;OFF&gt; to deactivate this feature). If the power switches off even with 2 switched on, turn down the volume. With 1 or 2 on, some features may be unavailable.</td>
</tr>
<tr>
<td></td>
<td>Check whether the cables used to connect the speakers are short-circuited.</td>
</tr>
<tr>
<td></td>
<td>Wait at least 1 minute, then try turning the power on again.</td>
</tr>
<tr>
<td></td>
<td>The temperature within the unit has exceeded the allowable value. Lower the volume level.</td>
</tr>
</tbody>
</table>

### Symptom

- AMP OVERHEAT blinks in the display and the FL OFF indicator flash and the power turns off.
  - Allow the unit to cool down in a well-ventilated place before switching back on (see Installing the receiver on page 3).
  - Check whether the cables used to connect the speakers are short-circuited.
  - Wait at least 1 minute, then try turning the power on again.
  - The temperature within the unit has exceeded the allowable value. Lower the volume level.

- HDZONE cannot be turned on.
  - Set Output Setting at MAIN/HDZONE to HDZONE (page 80).

### No sound

- There is no sound output, the sound gets cut off, or there is noise present.
  - Check the volume, mute setting (press MUTE) and speaker setting (press OUT P.).
  - Make sure the correct input function is selected.
  - Check that the MCACC setup microphone is disconnected.
  - Make sure the correct input signal is selected (see Displaying the input signal on page 53).
  - Check that the source component is connected properly (see Connecting your equipment on page 11).
  - Check that the speakers are connected properly (see Connecting the speakers on page 26).

- No sound from the surround or center speakers.
  - Check that the Stereo listening mode or the Front Stage Surround Advance mode isn’t selected; select one of the surround listening modes (see Enjoying various types of playback using the listening modes on page 53).
  - Check the surround center speakers are not set to NO (see Speaker Setting on page 83).
  - Check the channel level settings (see Channel Level on page 88).
  - Check the speaker connections (see Connecting the speakers on page 29).

- No sound from the surround back speakers.
  - Check that the surround back speakers are set to LARGE or SMALL and the surround speakers are not set to NO (see Speaker Setting on page 59).
  - Check the speaker connections (see Connecting the speakers on page 29). If only one surround back speaker is connected, make sure it’s connected to the left channel speaker terminal.

When Speaker System is set to Normal(SB/FH) or Normal(SB/FW) and SP: FH ON or SP: FW ON is selected with the OUT P. button, no sound will be output from the surround back speakers. Select SP: SB/FH ON, SP: SB/FW ON or SP: SB ON (see Switching the speaker terminals on page 60).
**Symptom** | **Remedy**
--- | ---
No sound from front height or front wide speakers. | Check that the front height or front wide speakers are set to LARGE or SMALL, and the surround speakers are not set to NO (see Speaker Setting on page 87). When Speaker System is set to Normal(SB/FH) or Normal(SB/FW) and SP: SB ON is selected with the OUT P button, no sound will be output from the front height or front wide speakers. Select SP: SB/FH ON, SP: SB/FW ON, SP: FH ON or SP: FW ON (see Switching the speaker terminals on page 88). Check the speaker connections (see Connecting the speakers on page 20). The crossover frequency may be set too low; try setting it higher to match the characteristics of your other speakers (see Speaker Setting on page 87). If there is very little low frequency information in the source material, change your speaker settings to Front: SMALL / Subwoofer: YES, or Front: LARGE / Subwoofer: PLUS (see Speaker Setting on page 87). Check that the LFE channel is not set to OFF or, to a very quiet setting (see Setting the LFE level on page 88). Check the speaker connections (see Connecting the speakers on page 20). Check the speaker level settings (see Channel Level on page 88). Check the digital output settings on the source component. If the speaker component has a digital volume control, make sure this is not turned down.
No sound from one speaker. | Check the speaker connection (see Connecting the speakers on page 20). Check the speaker level settings (see Channel Level on page 88). Check that the speaker hasn’t been set to NO (see Speaker Setting on page 87). The channel may not be recorded in the source. By using one of the advanced effects, you may be able to create the missing channel (see Enjoying various types of playback using the listening modes on page 51). Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 39). Check that the input signal type is set to DIGITAL (see Choosing the input signal on page 50). Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 39). Check the digital output settings on the source component. If the source component has a digital volume control, make sure this is not turned down.
Sound is produced from analog components, but not from digital ones (DVD, LD, CD, etc.). | Check that the input signal type is set to DIGITAL (see Choosing the input signal on page 50). Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 39). Check the digital output settings on the source component. If the source component has a digital volume control, make sure this is not turned down.
No sound output or a noise is output when Dolby Digital/DTS software is played back. | Check that your BD or DVD player is compatible with Dolby Digital/DTS discs. Check the digital output settings or the HDMI audio output settings of your BD or DVD player. Make sure that the DTS signal output is set to ON. If the source component has a digital volume control, make sure this is not turned down.
No sound when using the HOME MENU | If the HDMI input function is selected, sound is muted until exiting the HOME MENU.

### Other audio problems

**Symptom** | **Remedy**
--- | ---
Speaker switching sound (clicking sound) is heard from receiver during playback. | Since ECO MODE 1 and ECO MODE 2 reduce the power consumption, the speakers are switched in function of the number of input channels. Because of this, a speaker switching sound (clicking sound) may be produced when the number of input channels is switched. If this bothers you, switch to a different listening mode. Depending on the listening mode, the front height (or front wide) and surround back speakers may switch automatically in function of changes in the input audio. A speaker switching sound (clicking sound) will be heard from the receiver at this time. If this sound bothers you, we recommend to change the speaker terminal option (see Switching the speaker terminals on page 88).

Broadcast stations cannot be selected automatically, or there is considerable noise in radio broadcasts. | Fully extend the FM wire antenna, adjust the position for best reception and secure to a wall, etc. Use an outdoor antenna for better reception (see page 29). Adjust the position and direction of the AM antenna. Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna. Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna. Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna. Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna. Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna.

Noise is output when scanning a DTS CD. | This is not a malfunction of the receiver. The scan function of your player alters the digital information, making it unreadable, resulting in noise being output. Lower the volume when scanning.

When playing a DTS format LD there is audible noise on the soundtrack. | Make sure that the input signal type is set to DIGITAL (see Choosing the input signal on page 50). Subwoofer output is very low. To route more signal to the subwoofer, set it to PLUS or set the front speakers to SMALL (see Speaker Setting on page 87). Everything seems to be set up correctly, but the playback sound is odd. The Phase Control function doesn’t seem to have an audible effect. If applicable, check that the downmix filter switch on your subwoofer is off, or the downmix cutoff is set to the highest frequency setting. If there is a PHASE setting on your subwoofer, set it to 0° (or depending on the subwoofer, the setting where you think it has the best overall effect on the sound). Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 58). Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 58). Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 58).

Noise or hum can be heard even when there is no sound being input. Check that personal computers or other digital components connected to the same power source are not causing interference. Can’t select some Input functions by the INPUT SELECTOR on the front panel or the ALL button on the remote control. Check the Input Skip settings in the Input Setup menu (see The Input Setup menu on page 50). Check the HDMI input assignment in the Input Setup menu then turn OFF (see The Input Setup menu on page 50). There seems to be a time lag between the speakers and the output of the subwoofer. See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 37 to set up your system again using MCACC (this will automatically compensate for a delay in the subwoofer output). The maximum volume available (shown in the front panel display) is lower than the +12dB maximum. Check that the Volume Limit is set to OFF (see Volume Setup on page 93). The channel level setting may be over 0.0dB. Certain listening modes or HOME MENU items cannot be selected. When Operation Mode is set to Basic, the Pioneer-recommended settings are made and not all of the functions can be used. To use all of the functions without restrictions, set Operation Mode to Expert (see Operation Mode Setup on page 92). Some functions cannot be selected, depending on the input signal and listening mode.
Symptom | Remedy
---|---
The volume level drops automatically. | The temperature within the unit has exceeded the allowable value. Try moving the unit for better ventilation (see [installing the receiver on page 9]).
Volume seems different when input is switched. | Set the Channel Level setting to ALL, then adjust the volume of the respective input sources (see Input Volume Adjustment on page 69).
When HDZONE is ON, multi-channel audio sources are not output in the main zone. | When HDZONE is selected in Speaker System and also the same HDMI input is selected for both the main zone and HDZONE, 2-channel PCM audio sources are output from the main zone as well. To output multi-channel audio sources, set HDZONE to OFF or change the HDZONE input.
No HDZONE sound is output. | With HDZONE, multi-channel audio may not be output. In this case, set the audio output setting of your playback device to 2-channel PCM.

**ADAPTER PORT terminal**

Symptom | Remedy
---|---
The Bluetooth wireless technology device cannot be connected or operated. Sound from the Bluetooth wireless technology device is not emitted or the sound is interrupted. | Check that there is no object that emits electromagnetic waves in the 2.4 GHz band (microwave oven, wireless LAN device or Bluetooth wireless technology apparatus) near the unit. If such an object is near the unit, set the unit far from it. Or, stop using the object emitting the electromagnetic waves.
Check that the Bluetooth wireless technology device is not too far from the unit and that obstructions are not set between the Bluetooth wireless technology device and the unit. Set the Bluetooth wireless technology device and the unit so that the distance between them is less than about 10 m and no obstructions exist between them.
Check that the Bluetooth ADAPTER and the BT AUDIO of the unit are correctly connected.
The Bluetooth wireless technology device may not be set to the communication mode supporting the Bluetooth wireless technology. Check the setting of the Bluetooth wireless technology device.
Check that pairing is correct. The pairing setting was deleted from this unit or the Bluetooth wireless technology device is not too far from the unit and that obstructions are not set between the Bluetooth wireless technology device and the unit.
Check that the profile is correct. Use a Bluetooth wireless technology device that supports A2DP profile and AVRCP profile.

**Video**

Symptom | Remedy
---|---
No image is output when an input is selected. | Check the video connections of the source component. For HDMI, or when V.CONV is set to OFF and a TV and another component are connected with different cords (see Setting the Video options on page 67), you must connect your TV to this receiver using the same type of video cable as you used to connect your video component. For the component video input, however, signals are only output from the HDMI output, so when using the component video input, set V.CONV to ON.
Make sure the input assignment is correct for components connected using component video or HDMI cables (see The Input Setup menu on page 69).
Check the video output settings of the source component. Check that the video input you selected on your TV is correct.
Check the video output settings of the source component. Some components (such as video game units) have resolutions that may not be converted. If adjusting this receiver’s Resolution setting (in Setting the Video options on page 67) and/or the resolution settings on your component or display doesn’t work, try switching V.CONV (in Setting the Video options on page 67) to OFF.
When the HDMI OUT 1/2 setting of the output parameter function is set to OFF, set it to ON.
If HDZONE is set to on, video images connected using a video cable or component cable are not output from the HDMI terminal. To output video images, turn HDZONE off (page 70).

Noisy, intermittent, or distorted picture. | Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again.
The picture’s movement is unnatural. | When Resolution under VIDEOPARAMETER is set to 1080/24p or 4K/24p, the picture may not be displayed properly for some source materials. In this case, set the resolution to something other than 1080/24p or 4K/24p (page 67).
Video parameters cannot be used. | For audio only input (TUNER, CD, and TV), the video parameter function cannot be used. Use for video or input with a GUI display.

Cannot be used when the HDZONE is ON. Turn OFF the HDZONE.
**Settings**

**Symptom**  
The Auto MCACC Setup continually shows an error.

**Remedy**  
The ambient noise level may be too high. Keep the noise level in the room as low as possible (see also Problems when using the Auto MCACC Setup on page 38). If the noise level cannot be kept low enough, you will have to set up the surround sound manually (page 87).  
When using only one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.  
To use a 5.1-channel speaker set, use the surround speakers for the surround channel, not the surround back channel.  
Make sure there are no obstacles between the speakers and the microphone.  
If Reverse Phase is displayed, try the following:  
— The speaker’s wiring (+ and –) may be inverted. Check the speaker connections.  
— Depending on the type of speakers and their installation conditions, Reverse Phase may be displayed even if the speakers are properly connected. If this happens, select GO NEXT and continue.  
— If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), it may not be possible to properly identify the polarity.

After using the Auto MCACC Setup, the speaker size setting is incorrect.

**Remedy**  
There may have been some low frequency noise in the room from an air-conditioner, motor, etc. Switch off all other appliances in the room and use Auto MCACC Setup again.  
Depending on a number of factors (bass reproduction capabilities of the speakers, room size, speaker placement, etc.) this may occur in some cases. Change the speaker setting manually in Speaker Setting on page 87, and use the Automatic MCACC option for the Auto MCACC menu in Automatic MCACC (Expert) on page 86 if this is a recurring problem.

Can’t adjust the Fine Speaker Distance setting properly.

**Remedy**  
Check that the speakers are all in phase (make sure the positive (+) and negative (–) terminals are matched up properly).

The display shows KEY LOCK ON when you try to make settings.

**Remedy**  
With the receiver in standby, press STANDBY/ON for about 5 seconds while holding down SPEAKERS to disable the key lock.

**Display**

**Symptom**  
The display is dark or off.

**Remedy**  
Press DIMMER repeatedly to select a different brightness.

The OSD screen is not displayed.

**Remedy**  
The on-screen display is not displayed unless the receiver’s HDMI OUT 1 terminal and the TV are connected with an HDMI cable. If the TV does not support HDMI, perform the operations and make the settings watching the display on the receiver’s front panel.

Even though the input is switched, DIGITAL does not light.

**Remedy**  
Check the digital connections and make sure that the digital inputs are assigned correctly (see Choosing the input signal on page 53).

These indicators do not light if playback is paused.

**Remedy**  
Make sure that the receiver is set to AUTO or DIGITAL (see Choosing the input signal on page 53).

When playing Dolby Digital or DTS sources, the receiver’s format indicators do not light.

**Remedy**  
Check that the player is connected using a digital connection.

When playing Dolby Digital or DTS sources, the receiver’s format indicators do not light.

**Remedy**  
Check that the player isn’t set to AUTO or DIGITAL (see Choosing the input signal on page 53).

When playing Dolby Digital or DTS sources, the receiver’s format indicators do not light.

**Remedy**  
Check that the player isn’t set up so that Dolby Digital and DTS sources are converted to PCM.

Ensure that if there are several audio tracks on the disc, the Dolby Digital or DTS is selected.

When playing certain discs, none of the receiver’s format indicators light.

**Remedy**  
The disc may not contain multi-channel material. Check the disc packaging for more on what audio tracks are recorded on the disc.

It does not light when the PCM signal or analog signal is input.

---

**Professional Calibration EQ graphical output**

**Symptom**  
The reverb characteristics graph after EQ calibration does not appear entirely flat.

**Remedy**  
There are cases where the graph does not appear flat (even when selecting ALL CH ADJ in the Auto MCACC Setup) due to adjustments made to compensate for room characteristics to achieve optimal sound.

**Symptom**  
Areas of the graph may appear identical (before and after) when there is little or no adjustment needed.

**Remedy**  
The graph may appear to have shifted vertically when comparing before and after measurements.

**Symptom**  
EQ adjustments made using the Manual MCACC setup do not appear to change the reverb characteristics graph after EQ calibration.

**Remedy**  
Despite level adjustments being made, the filters used for analysis may not display these adjustments in the reverb characteristics graph after EQ calibration. However, these adjustments are taken into account by the filters dedicated to overall system calibration.

**Symptom**  
Lower frequency response curves do not seem to have been calibrated for small speakers.

**Remedy**  
Low frequencies used in bass management (the subwoofer channel) will not change for speakers that have been specified as SMALL in the configuration, or do not output these frequencies.

**Symptom**  
Calibration is performed, but due to your speakers’ low frequency limitations, no measurable sound is output for display.
## Symptom Remedy

### Remote control

**Symptom** Cannot be remote controlled.

- **Remedy**
  - Set the remote control unit’s remote control mode so that it matches the setting on the main unit (see Operating multiple receivers on page 74).
  - Check whether the receiver’s remote control mode is properly set (see Remote Control Mode Setup on page 91).
  - Try replacing the batteries in the remote control (see Loading the batteries on page 9).
  - Be sure to operate within 7 m and a 30° angle of the remote sensor on the front panel (see Operating range of remote control unit on page 10).
  - Check that there are no obstacles between the receiver and the remote control.
  - Make sure that there is no fluorescent or other strong light shining on to the remote sensor.

- **Symptom** Other components can’t be operated with the system remote.

- **Remedy**
  - If the battery ran down, the preset codes may have been cleared. Re-enter the preset codes.
  - The preset code may be incorrect. Redo the procedure for entering preset codes.
  - When commands from the remote control units of other devices are registered using the learning function, in some cases they may not be learned properly. In this case, register the commands again using the learning function (see page 75). If they still do not work, they may be in a special format that cannot be registered on this receiver’s remote control. Operate the device using another remote control.

### HDMI

**Symptom** The HDMI indicator blinks continuously.

- **Remedy**
  - This receiver is HDCP-compatible. Check that the components you are connecting are also HDCP-compatible. If they are not, please connect them using the component or composite video jacks.
  - Depending on the connected source component, it’s possible that it will not work with this receiver (even if it is HDCP-compatible). In this case, connect using the component or composite video jacks between source and receiver.
  - If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.
  - If video images do not appear on your TV, try adjusting the resolution, Deep Color or other setting for your component.
  - While analog video signals are being output over HDMI, use a separate connection for audio output.
  - To output signals in Deep Color, use an HDMI cable (High Speed HDMI Cable) to connect this receiver to a component or TV with the Deep Color feature.

**Symptom** Video/audio is not output or is interrupted.

- **Remedy**
  - Influence from a TV whose power is set to standby may cause the picture or sound output to not be produced or to get cut off. In this case, press OUTPUT P, and make sure to use an output other than the HDMI output to which that TV is connected.
  - To use the HDMI OUT 2 terminal in the main zone, set the MAIN/HDZONE Output Setting to MAIN (page 92).
  - To use the HDMI OUT 2 terminal in the main zone, set the MAIN/HDZONE Output Setting to MAIN (page 92).
  - To use the HDMI OUT 2 terminal in the main zone, set the MAIN/HDZONE Output Setting to MAIN (page 92).
  - If the component is a DVI device, use a separate connection for the audio.
  - If analog video is being output over HDMI, please use a separate connection for the audio.
  - Check the audio output settings of the source component.
  - HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
  - Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

**Symptom** Noisy or distorted picture.

- **Remedy**
  - Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again.
  - If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.

</tbody>
</table>
Wireless LAN

Network cannot be accessed via wireless LAN.

Wireless LAN converter’s power is not on. (Wireless LAN converter’s “Power”, “WPS” and “Wireless” indicators are not all lit.)
- Check that the USB cable connecting the wireless LAN converter to the receiver’s DC OUTPUT for WIRELESS LAN terminal is properly connected.

WLAN POW ERR is displayed on the receiver’s display window.
- There is a problem with the wireless LAN converter’s power supply. Turn the receiver’s power off, then disconnect the USB cable, reconnect the USB cable and turn the receiver’s power back on.
- If WLAN POW ERR is still displayed after repeating the above procedure several times, there is a problem with the receiver or the USB cable. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

The LAN cable is not firmly connected.
- Firmly connect the LAN cable (page 33).

Wireless LAN converter and base unit (wireless LAN router, etc.) are too far apart or there is an obstacle between them.
- Improve the wireless LAN environment by moving the wireless LAN converter and base unit closer together, etc.

There is a microwave oven or other device generating electromagnetic waves near the wireless LAN environment.
- Use the system in a place away from microwave ovens or others device generating electromagnetic waves.
- Avoid using devices generating electromagnetic waves as much as possible when using the system with the wireless LAN.

Multiple wireless LAN converters are connected to the wireless LAN router.
- When connecting multiple wireless LAN converters, their IP addresses must be changed.

Wireless LAN connections cannot be established between the wireless LAN converter and base unit (wireless LAN router, etc.).
- The wireless LAN converter must be set in order to establish wireless LAN connections. For details, see the CD-ROM included with the wireless LAN converter.

The IP address settings of the receiver and wireless LAN converter do not match the settings of the wireless LAN router, etc.
- Check the IP address settings of the receiver and wireless LAN converter (including the DHCP setting). If the receiver’s DHCP setting is “ON”, turn the receiver’s power off, then turn the power back on. Check that the IP addresses of the receiver and wireless LAN converter match the settings of the wireless LAN router, etc.
- If the receiver’s DHCP setting is “OFF”, set an IP address matching the network of the base unit (wireless LAN router, etc.).
  For example, if the wireless LAN router’s IP address is “192.168.1.1”, set the receiver’s IP address to “192.168.1.XXX” (*1), the subnet mask to “255.255.255.0”, the gateway and DNS to “192.168.1.1”. Next, set the wireless LAN converter’s IP address to “192.168.1.249” (*2).
  (*1) Set the “XXX” in “192.168.1.XXX” to a number between 2 and 248 that is not assigned to other devices.
  (*2) Set the “249” in “192.168.1.249” to a number between 2 and 249 that is not assigned to other devices.

Try making the wireless LAN converter’s advanced settings.

- The wireless LAN converter can be connected to a computer to make the advanced wireless LAN settings. For details, see the CD-ROM included for the wireless LAN converter. Check the settings of the wireless LAN router, etc., then change the settings of the wireless LAN converter.
- Note, however, that making the advanced wireless LAN settings will not necessarily improve the wireless LAN environment. Be careful when changing the settings.

The access point is set to conceal the SSID.
- In this case, the SSID may not be displayed on the access point list screen. If not, set the SSID, etc., by making the wireless LAN converter settings on the receiver manually.

The access point’s security settings use WEP 152-bit length code key or shared key authentication.
- The receiver does not support WEP 152-bit length code key or shared key authentication.

Network connections cannot be established even when the above measures are taken.
- Reset the wireless LAN converter. After this, redo the wireless LAN converter’s settings.
  About resetting
  1. Check that the wireless LAN converter’s power is on.
  2. Press the wireless LAN converter’s reset button for at least 3 seconds.
  3. Release the reset button.

When the wireless LAN converter is restarted, the resetting procedure is completed.
**Surround sound formats**
Below is a brief description of the main surround sound formats you’ll find on BDs, DVDs, satellite, cable and terrestrial broadcasts, and video cassettes.

**Dolby**
The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

Manufactured under license from Dolby Laboratories. Dolby, Pro Logic, Surround EX, and the double-D symbol are trademarks of Dolby Laboratories.

**DTS**
The DTS technologies are explained below. See http://www.dts.com for more detailed information.

For DTS patents, see http://patents.dts.com. Manufactured under license from DTS Licensing Limited. DTS, DTS-HD, the Symbol, & DTS and the Symbol together are registered trademarks, and DTS-HD Master Audio is a trademark of DTS, Inc. © DTS, Inc. All Rights Reserved.

SABRE DAC™

SABRE DAC™ and the logo are trademarks of ESS Technology, Inc.

**About HDMI**
HDMI (High-Definition Multimedia Interface) is a digital transfer standard for receiving video and audio data with a single cable. It is an adaptation of DVI (Digital Visual Interface), a display connection technology, for use in home audio devices. This interface standard is for next-generation TVs providing High-bandwidth Digital Content Protection (HDCP).

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

**HTC Connect**
HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.

For DTS patents, see http://patents.dts.com. Manufactured under license from DTS Licensing Limited. DTS, the Symbol, & DTS and the Symbol together are registered trademarks, and DTS Neo:X | 7.1 is a trademark of DTS, Inc. © DTS, Inc. All Rights Reserved.
About iPod

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

USB works with iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPhone 3G, iPhone, iPod touch (1st through 5th generation) and iPod nano (3rd through 7th generation).

“Made for iPod” and “Made for iPhone” mean that an electronic accessory has been designed to connect specifically to iPod or iPhone, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod or iPhone may affect wireless performance. Apple, AirPlay, iPad, iPhone, iPod, iPod touch, iTunes, Safari, Bonjour, Mac, Mac OS and OS X are trademarks of Apple Inc., registered in the U.S. and other countries.

### Speaker Setting Guide

In order to achieve an even better surround effect, it is important to accurately position the speakers and make their volume and tone characteristics uniform so as to finely focus the multi-channel sound.

The three major elements in positioning the speakers are distance, angle and orientation (the direction in which the speakers are pointing).

**Distance**: The distance of all the speakers should be equal.

**Angle**: The speakers should be horizontally symmetrical.

**Orientation**: The orientation should be horizontally symmetrical.

In most homes, however, it is not possible to achieve this environment. For the distance, on this receiver it is possible to automatically correct the speaker distance electrically to a precision of 1 cm using the Full Auto MCACC Setup function (page 37).

#### Step 1: Speaker layout and distance adjustment

Use speaker stands or the like to make sure the speakers are steady, and leave at least 10 cm from the surrounding walls. Position the speakers attentively so that the speakers on the left and right are at equal angles from the listening position (center of the adjustments). (We recommend using cords, etc., when adjusting the layout.) Ideally all the speakers should be equidistant from the listening position.

**Note**

If the speakers cannot be set at equal distances (on a circle), use the Auto MCACC Setup speaker distance correction and Fine Speaker Distance functions to make them equalize the distance artificially.

#### Step 2: Adjusting the speaker height

Adjust the heights (angles) of the different speakers. Adjust so that the front speaker units reproducing mid- and high frequencies is roughly at the height of the ears. If the center speaker cannot be set at the same height as the front speakers, adjust its angle of elevation to point it to the listening position.

Set surround speaker 1 so that it is not under the height of the ears.

#### Step 3: Adjusting the speaker orientation

If the left and right speakers are not pointing in the same direction, the tone will not be the same on the right and left, and as a result the sound field will not be reproduced properly. However, if all the speakers are pointed towards the listening position, the sound field will seem cramped. Testing by the Pioneer Multi-channel Research Group has shown that a good sense of sound positioning can be achieved by pointing all the speakers towards an area 30 cm to 80 cm behind the listening position (between the surround speakers and the listening position).

However, the sense of sound positioning can differ according to the conditions in the room and the speakers being used. In smaller environments in particular (when the front speakers are close to the listening position), with this method the speakers will be pointed too inward. We suggest you use this example of installation as reference when trying out different installation methods.

#### Step 4: Positioning and adjusting the subwoofer

Placing the subwoofer between the center and front speakers makes even music sources sound more natural (if there is only one subwoofer, it doesn’t matter if it is placed on the left or right side). The low bass sound output from the subwoofer is not directional and there is no need to adjust the height. Normally the subwoofer is placed on the floor. Put it in a position at which it will not cancel out the bass sound output from the other speakers. Also note that placing it near a wall may result in sympathetic vibrations with the building that could excessively amplify the bass sound.
If the subwoofer must be installed near a wall, place it at an angle so that it is not parallel to the wall surface. This can help reduce any sympathetic vibrations, but depending on the shape of the room this could result in standing waves. However, even if standing waves are generated, their influence on the sound quality can be prevented using the Auto MCACC’s standing wave control function (page 83).

**Step 5: Default settings with the Auto MCACC Setup (auto sound field correction) function**

It is more effective to perform the Full Auto MCACC Setup (page 37) procedure once the adjustments described above have been completed.

**Note**
The distance to the subwoofer may be slightly larger than the distance actually measured with a tape measure, etc. This is because this distance is corrected for electric delay, and is not a problem.

**Positional relationship between speakers and monitor**

**Position of front speakers and monitor**
The front speakers should be as equidistant as possible to the monitor.

**Position of center speaker and monitor**
Since mostly dialogs are output from the center speaker, keeping the center speaker as close as possible to the screen makes the overall sound more natural. For TVs using Braun tubes, however, when installing the center speaker on the floor, adjust its angle of elevation to point it towards the listening position.

- If the center speaker is not of the shielded type, install it away from the TV.
- When installing the center speaker on top of the monitor, place it facing slightly downwards towards the listening position.

### Important information regarding the HDMI connection

There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI-equipped component you are connecting-check with the manufacturer for HDMI compatibility information).

If you aren’t receiving HDMI signals properly through this receiver (from your component), please try one of the following configurations when connecting up.

**Configuration A**
Use component video cables to connect the video output of your HDMI-equipped component to the receiver’s component video input. The receiver can then convert the analog component video signal to a digital HDMI signal for transmission to the display. For this configuration, use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections.

**Note**
The picture quality will change slightly during conversion.

**Configuration B**
Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

**Notes**
- If your display only has one HDMI terminal, you can only receive HDMI video from the connected component.
- Depending on the component, audio output may be limited to the number of channels available from the connected display unit (for example audio output is reduced to 2 channels for a monitor with stereo audio limitations).
- If you want to switch the input function, you’ll have to switch functions on both the receiver and your display unit.
- Since the sound is muted on the display when using the HDMI connection, you must adjust the volume on the display every time you switch input functions.

### About messages displayed when using network functions

Refer to the following information when you come up with a status message while operating the Network functions.

<table>
<thead>
<tr>
<th>Status messages</th>
<th>Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connection Down</td>
<td>The selected category or Internet radio station cannot be accessed.</td>
</tr>
<tr>
<td>File Format Error</td>
<td>Cannot be played back for some reasons.</td>
</tr>
<tr>
<td>Track Not Found</td>
<td>The selected song has not been found anywhere on the network.</td>
</tr>
<tr>
<td>Server Error</td>
<td>The selected server cannot be accessed.</td>
</tr>
<tr>
<td>Server Disconnected</td>
<td>The server has been disconnected.</td>
</tr>
<tr>
<td>Empty</td>
<td>There are no files stored in the selected folder.</td>
</tr>
<tr>
<td>License Error</td>
<td>The license for the contents to be played back is invalid.</td>
</tr>
<tr>
<td>Item Already Exists</td>
<td>This is displayed when the file you have attempted to register in the Favorites folder has already been registered.</td>
</tr>

**Important information regarding the HDMI connection**

There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI-equipped component you are connecting-check with the manufacturer for HDMI compatibility information).

If you aren’t receiving HDMI signals properly through this receiver (from your component), please try one of the following configurations when connecting up.

**Configuration A**
Use component video cables to connect the video output of your HDMI-equipped component to the receiver’s component video input. The receiver can then convert the analog component video signal to a digital HDMI signal for transmission to the display. For this configuration, use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections.

**Note**
The picture quality will change slightly during conversion.

**Configuration B**
Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

**Notes**
- If your display only has one HDMI terminal, you can only receive HDMI video from the connected component.
- Depending on the component, audio output may be limited to the number of channels available from the connected display unit (for example audio output is reduced to 2 channels for a monitor with stereo audio limitations).
- If you want to switch the input function, you’ll have to switch functions on both the receiver and your display unit.
- Since the sound is muted on the display when using the HDMI connection, you must adjust the volume on the display every time you switch input functions.
Cleaning the unit
- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
- Never use thinners, benzene, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.

Glossary

Audio formats/Decoding

Dolby
The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

Dolby Digital
Dolby Digital is a multichannel digital audio coding system widely used in cinemas, and in the home for DVD and digital broadcast soundtracks.

Dolby TrueHD
Dolby TrueHD is the lossless encoding technology developed for high-definition optical discs in the upcoming era.

Dolby Digital Plus
Dolby Digital Plus is the audio technology for all high-definition programming and media. It combines the efficiency to meet future broadcast demands with the power and flexibility to realize the full audio potential expected in the upcoming high-definition era.

Dolby Digital Surround EX
Dolby Digital Surround EX (the EX stands for EXtended) is an extension of Dolby Digital encoding whereby a surround back channel is matrixed into the surround left/right channels for 6.1 channel playback. This allows for compatibility with Dolby Digital 5.1 channel decoding, as well as for decoding using Dolby Digital EX.

Dolby Pro Logic IIX and Dolby Surround
Dolby Pro Logic IIX is an improved version of the Dolby Pro Logic II (and Dolby Pro Logic) decoding system. Dolby Surround is an encoding system which embeds surround sound information within a stereo soundtrack, which a Dolby Pro Logic decoder can then use for enhanced surround listening with greater sound detail.

Dolby Pro Logic IIX
Adding a pair of speakers above the front left and right speakers adds expressiveness in the vertical direction to the previous horizontally-oriented sound field. The height channel strengthens the sound field’s sense of three-dimensionality and air, producing presence and expansion.

DTS
The DTS technologies are explained below. See http://www.dts.com for more detailed information.

DTS Digital Surround
DTS Digital Surround is a 5.1-channel audio coding system from DTS Inc. now widely used for DVD-Video, DVD-Audio, 5.1 music discs, digital broadcasts, and video games.

DTS-HD Master Audio
DTS-HD Master Audio is a technology that delivers master audio sources recorded in a professional studio to listeners without any loss of data, preserving audio quality.

DTS-HD High Resolution Audio
A high definition audio technology by which signals can be transferred over HDMI cables.

DTS-ES
DTS-ES (the ES stands for Extended Surround) is a decoder that is capable of decoding both DTS-ES Discrete 6.1 and DTS-ES Matrix 6.1 encoded sources.

DTS Neo:X
DTS Neo:X can generate 11.1 channel surround sound from any matrixed stereo source (such as video or TV) and from 5.1 channel sources.
Decoding
A technology for converting digital signals that have been compressed upon recording by a digital signal processing circuit, etc., into the original signals. The term “decoding” (or “matrix decoding”) is also used for the technology which converts 2-channel sound sources into multiple channels or expands 5.1-channel signals into 6.1 or 7.1 channels.

Calibrating the sound field/Improving the sound quality

Phase Control
The Phase Control technology incorporated into this receiver’s design provides coherent sound reproduction through the use of phase matching for an optimal sound image at your listening position.

Virtual Speakers
Virtual playback of a maximum of 11.2 channels combining the actually installed speakers and the virtual speakers is possible. This makes for smoother connection between the sounds and an improved 3D feel.

Virtual Surround Back
When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information.

Virtual Height
When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers.

Virtual Wide
When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers.

Virtual Depth
When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence.

Auto Sound Retriever
The Auto Sound Retriever feature employs DSP technology to restore sound pressure and smooth jagged artifacts left over after compression.

With some audio inputs, the Sound Retriever effect is automatically optimized based on the bitrate information of the contents that have been input to achieve high sound quality.

Sound Retriever Air
Sound Retriever Air compensates for reduced sound quality due to compression when sending Bluetooth signals.

PQLS
Jitterless high quality playback is possible by connecting a PQLS-compatible player with HDMI connections.

ALC (Auto Level Control)
In the Auto level control (ALC) mode, this receiver equalizes playback sound levels.

Also, the low and high frequency sounds, dialogs, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.

Front Stage Surround Advance
With the Front Stage Surround Advance feature, you can enjoy seamless, natural surround sound effects using only the front speakers, without deteriorating the quality of the original sound.

MCACC
The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.

HDMI

Control with HDMI function
Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

ARC (Audio Return Channel)
When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT terminal.

The sound of the TV can be input from the receiver’s HDMI OUT terminal, so connection with the TV can be completed with a single HDMI cable.

Network function

AirPlay
AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

For more information, see the Apple website (http://www.apple.com).

DLNA
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

vTuner
vTuner is a paid online database service that allows you to listen to radio and TV broadcasts on the Internet.

vTuner lists thousands of stations from over 100 different countries around the globe. For more detail about vTuner, visit the following website: http://www.radio-pioneer.com

“ALAC” stands for Apple Lossless Audio Codec. This is a lossless type audio codec and is used for example for iTunes®. It compresses non-compressed files (such as WAV and AIFF) to about one half the original size with no loss of sound quality.

FLAC (Free Lossless Audio Codec) is an audio format allows lossless codec. Audio is compressed in FLAC without any loss in quality. For more details about FLAC, visit the following website: http://flac.sourceforge.net/

Windows Media
Windows Media is a multimedia framework for media creation and distribution for Microsoft Windows. Windows Media is either a registered trademark or trademark of Microsoft Corporation in the U.S. and/or other countries.

Use an application licensed by Microsoft Corporation to author, distribute, or play Windows Media formatted content. Using an application unauthorized by Microsoft Corporation is subject to malfunction.
Windows Media Player 11/Windows Media Player 12
Windows Media Player is software to deliver music, photos and movies from a Microsoft Windows computer to
home stereo systems and TVs.
With this software, you can play back files stored on the PC through various devices wherever you like in your
home.
This software can be downloaded from Microsoft’s website.
- Windows Media Player 11 (for Windows XP or Windows Vista)
- Windows Media Player 12 (for Windows 7 or Windows 8)
For more information check the official Microsoft website.

Router
A device for relaying data flowing on a network to another network. In homes, routers often also function as
DHCP servers. Products with built-in wireless LAN access points are called “wireless LAN routers”.

DHCP
Abbreviation of Dynamic Host Configuration Protocol. A protocol for automatically assigning such setting infor-
mation as IP addresses within network connections. This offers convenience in that, when enabled, it allows
network functions to be used simply by connecting the devices to the network.

Wireless LAN/Wi-Fi
“Wi-Fi” (Wireless Fidelity) is a trademark coined by the Wi-Fi Alliance trade association to increase recognition
of wireless LAN standards. With the increase in the number of devices connected to computers in recent years,
Wi-Fi offers the advantage of eliminating the complexity of making connections with LAN cables by using wire-
less connection. As a way of reassuring users, products that have passed interoperability tests carry the logo
“Wi-Fi Certified” to indicate that compatibility is assured.

WPS
Abbreviation of Wi-Fi Protected Setup. A standard established by the Wi-Fi Alliance industry group for a function
allowing settings related to interconnection of WPS-compatible wireless LAN devices and encryption to be made
with simple operations. There are a number of methods, including push-button configuration and PIN code con-
figuration. This AV receiver supports both push-button configuration and PIN code configuration.

SSID
Abbreviation of Service Set IDentifier. A wireless LAN access point identifier. Can be set as desired using up to 32
characters of English letters and numbers.

Bluetooth function
Bluetooth wireless technology
A short-range wireless communications standard for digital devices. Information is exchanged between devices
several meters to several tens of meters apart using radio waves. It uses radio waves on the 2.4 GHz band which
does not require applications for licenses or usage registration for applications conducting wireless exchange
of digital information at relatively low speeds, such as computer mouses and keyboards, mobile phones, smart-
phones, text and audio information for PDAs, etc.

Pairing
“Pairing” must be done before you start playback of Bluetooth wireless technology content using the Bluetooth
ADAPTER. Make sure to perform pairing the first time you operate the system or any time pairing data is cleared.
The pairing step is necessary to register the Bluetooth wireless technology device to enable Bluetooth communi-
cations. For more details, see also the operating instructions of your Bluetooth wireless technology device.
- Pairing is required when you first use the Bluetooth wireless technology device and Bluetooth ADAPTER.
- To enable Bluetooth communication, pairing should be done with both your system and Bluetooth wireless
technology device.

Receiver function
Operation Mode
This receiver is equipped with a great number of functions and settings. The Operation Mode feature is provided
for users who find it difficult to master all these functions and settings.

MHL
MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices.
MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats.
“This receiver incorporates MHL 2.”
