CAUTION
TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

VENTILATION CAUTION
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 20 cm at top, 10 cm at rear, and 20 cm at each side).

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table-cloths, curtains) or by operating the equipment on thick carpet or a bed.

Operating Environment
Operating environment temperature and humidity: +5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)
Do not install this unit in a poorly ventilated area, or in locations exposed to high humidity or direct sunlight (or strong artificial light).

CAUTION
The STANDBY/ON switch on this unit will not completely shut off all power from the AC outlet. Since the power cord serves as the main disconnect device for the unit, you will need to unplug it from the AC outlet to shut down all power. Therefore, make sure the unit has been installed so that the power cord can be easily unplugged from the AC outlet in case of an accident. To avoid fire hazard, the power cord should also be unplugged from the AC outlet when left unused for a long period of time (for example, when on vacation).

Voltage selector
You can find the voltage selector switch on the rear panel of multi-voltage models.
The factory setting for the voltage selector is 220-230 V. Please set it to the correct voltage for your country or region.

Before changing the voltage, disconnect the AC power cord. Use a medium size screwdriver to change the voltage selector switch.

This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.

WARNING
Store small parts out of the reach of children and infants. If accidentally swallowed, contact a doctor immediately.

Flow of settings on the receiver

Flow for connecting and setting the receiver

The unit is a full-fledged AV receiver equipped with an abundance of functions and terminals. It can be used easily after following the procedure below to make the connections and settings.

Required setting item: 1, 2, 3, 4, 5, 8, 10
Setting to be made as necessary: 6, 7, 9, 11, 12, 13, 14

Important

Using Wiring Navi on AVNavigator of this receiver, you can make the initial settings of the receiver on your computer or mobile device. In that case, you can use Wiring Navi to make the same connections or settings that are performed in Steps 2, 3, 4, 5, 6, 8, and 9. For details of how to use AVNavigator, refer to How to use the built-in AVNavigator on page 47.

1 Before you start
- Checking what’s in the box on page 10
- Loading the batteries on page 10

2 Determining the speakers’ application (page 20)
- [A] 9.2 channel surround system (Top middle/Front wide) connection
- [B] 9.2 channel surround system (Top middle/Front height) connection
- [C] 9.2 channel surround system (Top forward/Top backward) connection
- [D] 7.2 channel surround system & Speaker B connection
- [E] 7.2 channel surround system & Front Bi-amping connection (High quality surround)
- [F] 7.2 channel surround system & HDZONE connection (Multi Zone)
- [G] 5.2 channel surround system & Front Bi-amping connection (High quality surround) & HDZONE connection (Multi Zone)
- [H-1] 5.2 channel surround system & ZONE 2/ZONE 3 connection (Multi Zone)
- [H-2] 5.2 channel surround system & ZONE 2/HDZONE connection (Multi Zone)
- [H-3] Multi-ZONE Music connection
- [I] 5.2 channel surround system & Speaker B Bi-amping connection
- [J] 5.2 channel surround system & Front and Surround Bi-amping connection (High quality surround)
- [K] 5.2 channel surround system & Front and Center Bi-amping connection (High quality surround)
- [L] 5.2 channel surround system & Center and Surround Bi-amping connection (High quality surround)

3 Connecting the speakers
- Placing the speakers on page 23
- Connecting the speakers on page 24
- Installing your speaker system on page 26
- Bi-amping your speakers on page 25

4 Connecting the components
- About the audio connection on page 32
- About the video converter on page 32
- Connecting your TV and playback components on page 33
- Connecting AM/FM antennas on page 38
- Plugging in the receiver on page 45

5 Power On

6 Making the initial settings according to the region and environment in which you live
- Changing the TV format setting (page 52)
- Changing the frequency step (page 52)
- Changing the OSD display language (OSD Language) (page 51)

7 Using the AVNavigator functions (page 47)

8 MCACC speaker settings
- Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48

9 The Input Setup menu (page 50)
(When using connections other than the recommended connections)

10 Basic playback (page 53)

11 Switching the HDMI output (page 82)

12 Adjusting the sound and picture quality as desired
- Using the various listening modes (page 61)
- Better sound using Phase Control (page 64)
- Measuring the all EQ type (SYMMETRY/ALL CH ADJ/Front ALIGN) (page 63)
- Changing the channel level while listening (page 103)
- Switching on/off the Acoustic Calibration EQ, Auto Sound Retriever or Dialog Enhancement (page 77)
- Setting the PQLS function (page 74)
- Setting the Audio options (page 77)
- Setting the Video options (page 79)

13 Other optional adjustments and settings
- Control with HDMI function (page 79)
- The MCACC PRO menu (page 92)
- The System Setup and Other Setup menus (page 100)

14 Making maximum use of the remote control
- Operating multiple receivers (page 83)
- Setting the remote to control other components (page 87)

Our philosophy
Pioneer is dedicated to making your home theater listening experience as close as possible to the vision of the moviemakers and mastering engineer when they created the original soundtrack. We do this by focusing on three important steps:
1 Designing with carefully selected components so as to transmit the original soundtrack accurately
2 Allowing for customized acoustic calibration according to any listening area
3 Tuning that transmits soul

Features

Audio
- Class D Amplifier
This unit is an AV receiver developed based on the latest high performance Class D amplifier and integrating the essence of Pioneer’s high sound quality designs. This new generation reference amplifier offers outstanding performance with high sound quality and reproduces the latest in multi-channel digital contents.
- ESS-32bit-DAC-equipped
All channels are equipped with ESS SABRE 32 Ultra Audio DACs. The Jitter Eliminators achieve clearer sound.
- Audio Scaler
The combined effect of Hi-bit 32 Audio Processing, the digital filter and the up-sampling function can be used to convert the signals of music files or CDs to up to 192 kHz/32 bits to achieve even clearer sound with higher definition.
- Hi-Bit 32 Audio Processing
Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. 16-, 20- and 24-bit PCM as well as compressed audio is requantized to 32 bits, and the high frequency component is interpolated upon data processing to enable smoother, more subtle musical expression.
- Easy setup using MCACC PRO
The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.
- Auto Phase Control Plus
For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function automatically corrects phase shifting on such discs and broadcasts. This function is particularly effective when playing multi-channel music containing low frequency effects (LFE).
- Full Band Phase Control
The further advanced Full Band Phase Control technology focuses on the group delay in the speaker network filter, and compensates with special digital signal processing (DSP), to adjust the phase of each unit as well as the group delay for each speaker. Full Band Phase Control gives multi-range speakers the sound coherence of full-range speakers, while retaining the wide frequency range advantage.
- PQLS Bit-stream
Jitterless high quality playback is possible by connecting a PQLS-compatible player with HDMI connections. This feature is only available when the connected Pioneer Blu-ray Disc Player supports the PQLS function.

Video
- Independent dual subwoofer output
The output for two subwoofers can be adjusted and set independently. When using two subwoofers, more ideal low-frequency playback can be realized by properly adjusting the output to each woofer.
- Subwoofer EQ
The EQ for subwoofer output can be corrected. In addition to the results of MCACC automatic adjustment, the subwoofer output can be adjusted to match the viewing environment or your taste by manual correction.
- Ultra HD (with 4K/60p video support) - Pass-through and upscaling -
Up to 4K/60p resolution images can be passed through and displayed as such, and the HD (High Definition) or Full HD images of DVDs, Blu-ray discs and HD broadcasts can be upsampled to a resolution of up to 4K/60p and displayed. A separate monitor supporting Ultra HD (4K video) is required.
- HDMI (3D, Audio Return Channel) - 9in/3out (Dual out + HDZONE out)
A compatible component is required to use the above function.
Network

- **Spotify Digital Music-Streaming Service ready**
  Spotify is a digital music-streaming service that gives you on-demand access to millions of songs. This receiver is ready for Connect from Spotify, which lets you select songs on your Spotify app to listen to on your audio system. For service availability in your country check www.spotify.com.

- **Compatible with Windows 8.1**
  This receiver is compatible with Windows 8.1, letting you easily stream music from compatible PCs on your home network.

- **Apple AirPlay**
  With AirPlay you can stream music from iTunes to this receiver and play it through your home theater system. You can even use the receiver to view metadata including song titles, artist’s names as well as the album art on a connected display. You can easily enjoy your iTunes music in any room in the house.

- **DLNA Certified (1.5)**
  This receiver is a DLNA certified (1.5) device, enabled to work not only as a DMP (Digital Media Player) for playing DMS (Digital Media Server) audio files, but also as a DMR (Digital Media Renderer) to be controlled remotely by a device such as a smartphone or PC.

- **Internet Radio**
  By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations.

Connectivity

- **Easy Network connection with the Wireless LAN converter**
  With the AS-WL300 wireless LAN converter, you can enjoy using a wireless LAN connection for the AV receivers. The AS-WL300 works with the power supply from the AV receiver’s dedicated USB terminal, so no AC adapter is required.

- **Bluetooth adapter ready**
  Using the Bluetooth ADAPTER (AS-BT100 or AS-BT200) lets you enjoy music files on an iPhone or other Bluetooth wireless technology enabled device wirelessly.

- **MHL™ (Mobile High-definition Link)-compatible device playback**
  An incorporates MHL 2 mobile device can be connected to enjoy 3D videos, full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver.

- **HTC Connect**
  HTC Connect makes it easy to wirelessly stream your favorite music straight from your HTC phone. There’s no need for a separate app; HTC Connect is built right in your phone’s music player.

- **iPod Playback**
  Your iPod and iPhone can be connected to the receiver’s USB terminal to play the music files on the iPod or iPhone. Also, the iPod or iPhone is charged when it is connected to the receiver.
Before you start

Playback/Processing

- **Dolby Atmos**
  This AV receiver supports the latest Dolby Atmos surround sound system. Dolby Atmos is a new technology in which, through real-time calculation of audio data and meta data (position and time information) included in the audio signal, a surround sound space is achieved irrespective of the speaker layout and number of speakers. In order to enjoy Dolby Atmos, Dolby Atmos-compatible content is required. Dolby Atmos content on Dolby Atmos-compatible Blu-ray Discs can be played back on most conventional Blu-ray players by sending the Dolby Atmos bitstream to the AVR.

- **Multi-channel Music File playback**
  This receiver enables multi-channel music file playback with a resolution of up to 96 kHz/24 bit. Playback of WAV and FLAC files via the front USB port and network is supported.

- **DSD File Music playback (via Network, Front USB and HDMI)**
  Playback of high sound quality DSD music (DSD files and DSD discs (SACDs)) is supported.

- **High Resolution Music Playback**
  High resolution music files with resolutions of 96 kHz/24 bit to 192 kHz/24 bit can be played. Playback of AIFF, Apple Lossless, WAV and FLAC files via the front USB port and network is supported.

- **Gapless Playback**
  The silent section between tracks is skipped when playing music files, eliminating the interruptions that usually occur when playing live or concert contents. This receiver plays back AAC or MP3 format files with a minimum gap even though it is fundamentally impossible to play back without a gap.

- **Virtual Speakers**
  By turning on the ‘Virtual Surround Back’, ‘Virtual Height’, and ‘Virtual Wide’ modes, it is possible to realize a maximum of 11.1 channels combining the speakers that are actually installed and the virtual speakers. This makes for a smoother connection between the sounds and an improved 3D feel.

- **dts Neo:X compatible**
  This receiver supports the latest DTS processing format. The quality of Neo:X, originally designed for 9 channels or more, can be enjoyed in a 7-channel environment.

Installation

- **Built-in AVNavigator**
  When accessing the receiver from the browser of your smartphone, tablet, Windows PC or Mac, you can use Wiring Navi, which explains how to connect or Interactive Operation Guide, which visually and intelligibly explains the operation method.

- **iControlAV5 Remote Application**
  This is an application that allows intuitive operation of many of the receiver’s functions. This application is available on the App Store for iPhone, iPod touch and iPad. You can also get it on Google Play for Android smartphones. The application can be downloaded free of charge.

- **HDZONE output**
  This receiver supports output of the HDMI output to a subzone room. Powerful images can be enjoyed simply by connecting this receiver to a TV supporting 4K/Full-HD/3D. In addition, a multi-channel environment can be created by connecting this receiver to another AV receiver in the subzone room.

- **ZONE Ready**
  This receiver is equipped with HDZONE and ZONE 2. HDZONE supports HD audio/video streaming to a separate room via HDMI. Multi-Zone enables music and movie playback from different sources in three zones at the same time. With HDZONE, you can select not only HDMI input but also INTERNET RADIO or iPod/USB and the like.

- **Energy Saving Design**
  This AV receiver has an ecological design. In addition to even lower power consumption in standby, the receiver is equipped with an ‘eco mode’ for low power consumption when playing contents as well. Furthermore, the eco mode can easily be set with a dedicated button on the remote control of using iControlAV5.
Before you start

Checking what’s in the box

Please check that you’ve received the following supplied accessories:

- Setup microphone (cable: 5 m)
- Remote control unit
- AAA size IEC R03 dry cell batteries (to confirm system operation) x2
- AM loop antenna
- FM wire antenna
- Power cord
- CD-ROM
- Quick start guide
- Safety Brochure

Handling the CD-ROM

Precautions For Use

- This CD-ROM is for use with a personal computer. It cannot be used with a DVD player or music CD player. Attempting to play this CD-ROM with a DVD player or music CD player can damage speakers or cause impaired hearing due to the large volume.

License

- Please agree to the “Terms of Use” indicated below before using this CD-ROM. Do not use if you are unwilling to consent to the terms of its use.

Terms of Use

- Copyright to data provided on this CD-ROM belongs to PIONEER HOME ELECTRONICS CORPORATION. Unauthorized transfer, duplication, broadcast, public transmission, translation, sales, lending or other such matters that go beyond the scope of “personal use” or “citation” as defined by Copyright Law may be subject to punitive actions. Permission to use this CD-ROM is granted under license by PIONEER HOME ELECTRONICS CORPORATION.

General Disclaimer

- PIONEER HOME ELECTRONICS CORPORATION does not guarantee the operation of this CD-ROM with respect to personal computers using any of the applicable OS. In addition, PIONEER HOME ELECTRONICS CORPORATION is not liable for any damages incurred as a result of use of this CD-ROM and is not responsible for any compensation. The names of private corporations, products and other entities described herein are the registered trademarks or trademarks of their respective firms.

Installing the receiver

- When installing this unit, make sure to put it on a level and stable surface.
- Don’t install it on the following places:
  - on a color TV (the screen may distort)
  - near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
  - in direct sunlight
  - in damp or wet areas
  - in extremely hot or cold areas
  - in places where there is vibration or other movement
  - in places that are very dusty
  - in places that have hot fumes or oils (such as a kitchen)
- Do not touch this receiver’s bottom panel while the power is on or just after it is turned off. The bottom panel becomes hot when the power is on (or right after it is turned off) and could cause burns.

Loading the batteries

The batteries included with the unit are to check initial operations; they may not last over a long period. We recommend using alkaline batteries that have a longer life.

**WARNING**

- Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

**CAUTION**

- Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:
  - Never use new and old batteries together.
  - Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
  - When inserting the batteries, make sure not to damage the springs on the battery’s (–) terminals. This can cause batteries to leak or overheat.
  - Batteries with the same shape may have different voltages. Do not use different batteries together.
  - When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country/area.
Operating range of remote control unit

The remote control may not work properly if:

- There are obstacles between the remote control and the receiver’s remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.
Controls and displays

Remote control ..............................................................................................................................13
Display ............................................................................................................................................15
Front panel .....................................................................................................................................16
The remote has been conveniently color-coded according to component control using the following system:

- **White** – Receiver control, TV control
- **Blue** – Operation of other devices and each input (TUNER, etc.) (See pages 55, 56, 58, 59 and 90.)

1. **STANDBY/ON**
   This switches between standby and on for this receiver.

2. **ALL ZONE STBY**
   Use this button to perform unique operations (page 89).

3. **MAIN RECEIVER**
   Switches the remote to control the receiver (used to select the white commands). Switch to perform operations in the main zone.

4. **SOURCE CONTROL buttons**
   Switches the input. Also, switches remote control operation mode for operating other devices or each input (TUNER, etc.) (page 87).
   The input for HDMI, NET and ALL switches each time these buttons are pressed.

5. **TV control buttons**
   These buttons can be used to perform operations on the TV to which the TV INPUT button is assigned. The TV can be operated with these buttons regardless of the input set for the remote control’s operation mode (page 87).

6. **Receiver Control buttons**
   - **STATUS** – Displays the IP address and information such as selected/set functions and input signals on the display (page 84).
   - **OUT P.** (OUTPUT PARAMETER) – Switches the output terminal of the HDMI signal or speaker terminal to be played (page 81).
   - **RETURN** – Press to confirm and exit the current menu screen.
   - **CH LV.** (CHANNEL LEVEL) – Press repeatedly to select a channel, then use \( \uparrow/\downarrow \) to adjust the level (pages 82 and 103).

7. **Receiver setting buttons**
   Press MAIN RECEIVER first to access:
   - **AUDIO P.** (AUDIO PARAMETER) – Use to access the Audio options (page 77).
   - **VIDEO P.** (VIDEO PARAMETER) – Use to access the Video options (page 79).
   - **HOME MENU** – Use to access the Home Menu (pages 50, 51, 73, 93 and 101).

8. **\( \uparrow/\downarrow/\leftarrow/\rightarrow/\enter \)**
   Use the arrow buttons when setting up your surround sound system (see page 93) and the Audio or Video options (page 72 or 79).

9. **LISTENING MODE buttons**
   - **AUTO** (AUTO SURROUND/ALC/STREAM DIRECT) – Switches between Auto Surround (page 62), Auto Level Control mode and Stream Direct mode (page 63).
   - **SURR** (STANDARD SURROUND) – Press for Standard decoding and to switch various modes (Dolby, DTS, etc.) (page 63).
   - **ADV** (ADVANCED SURROUND) – Use to switch between the various surround modes (page 63).

10. **Source device operation button**
    Operates other devices or each input (TUNER, etc.).

11. **DIMMER**
    Dims or brightens the display (page 84).

12. **SLEEP**
    Use to put the receiver in sleep mode and select the amount of time before sleep (page 84).
13 Remote control LED
Lights when a command is sent from the remote control.

14 SUB ZONE CONTROL buttons
- **Z2** (ZONE 2) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to Zone 2 operation.
- **Z3** (ZONE 3) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to Zone 3 operation.
- **HDZ** (HDZONE) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to HDZONE operation.

15 VOLUME +/-
Use to set the listening volume.
To adjust the main zone sound volume, press MAIN RECEIVER first and then press this button. When in the sub zone, press the SUB ZONE CONTROL button first and then press this button.

16 MUTE
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
To mute the main zone sound volume, press MAIN RECEIVER first and then press this button. When in the sub zone, press the SUB ZONE CONTROL button first and then press this button.

17 ★ LIGHT/RCU SETUP
Turns on/off the button lights. The white buttons (excluding DIMMER, SLEEP, and LIGHT) light.
The way the buttons light can be selected from four modes (page 89).
Used to set the remote control (page 87).
1 Signal indicators
Light to indicate the currently selected input signal. **AUTO** lights when the receiver is set to select the input signal automatically (page 64).

2 Program format indicators
The channel to which the digital signal is input lights. The indicator does not light when Dolby Atmos content is being played back.
- **L/R** – Left front/Right front channel
- **C** – Center channel
- **SL/SR** – Left surround/Right surround channel
- **LFE** – Low frequency effects channel (the **()** indicators light when an LFE signal is being input)
- **XL/XR** – Two channels other than the ones above
- **XC** – Either one channel other than the ones above, the mono surround channel or matrix encode flag

3 Digital format indicators
Light when a signal encoded in the corresponding format is detected.
- **DIGITAL** – Lights with Dolby Digital decoding.
- **DIGITAL PLUS** – Lights with Dolby Digital Plus decoding.
- **TrueHD** – Lights with Dolby TrueHD decoding.
- **DTS** – Lights with DTS decoding.
- **DTS HD** – Lights with DTS-HD decoding.
- **96/24** – Lights with DTS 96/24 decoding.
- **DSD** – Lights during playback of DSD (Direct Stream Digital) signals.
- **DSD PCM** – Light during DSD (Direct Stream Digital) to PCM conversion.
- **PCM** – Lights during playback of PCM signals.
- **MSTR** – Lights during playback of DTS-HD Master Audio signals.

4 MULTI-ZONE
Lights when the MULTI-ZONE feature is active (page 83).

5 FULL BAND
Lights when the Full Band Phase Control is switched on (page 65).

6 Listening mode indicators
- **ALC** – Lights when the ALC (Auto level control) mode is selected (page 60).
- **AUTO SURROUND** – Lights when the Auto Surround feature is selected on (page 60)
- **STREAM DIRECT** – Lights when Direct/Pure Direct is selected (page 63)
- **ADV.SURROUND** – Lights when one of the Advanced Surround modes has been selected (page 63)
- **STANDARD** – Lights when one of the Standard Surround modes is switched on (page 60)

7 (PHASE CONTROL)
Lights when the Phase Control (page 64) or Full Band Phase Control (page 65) is switched on.

8 **ATT**
Lights when the input signal level is lowered to reduce distortion (page 77).

9 **PQLS**
Lights when the PQLS feature is active (page 74).

10 Tuner indicators
- **TUNED** – Lights when a broadcast is being received.
- **STEREO** – Lights when a stereo FM broadcast is being received in auto stereo mode.
- **MONO** – Lights when the mono mode is set using MPX

11 Lights when the sound is muted.

12 **SOUND**
Lights when the DIALOG E (Dialog Enhancement) or TONE (tone controls) features is selected (page 72).

13 Master volume level
Shows the overall volume level.
* ‘−’ indicates the minimum level, and ‘+12dB’ indicates the maximum level.

14 Input function indicators
Light to indicate the input function you have selected.

15 Scroll indicators
Light when there are more selectable items when making the various settings.

16 Speaker indicators
Lights to indicate the current speaker terminals setting using OUT P. (page 81).

17 **SLEEP**
Lights when the receiver is in sleep mode (page 84).

18 **S.RTRV**
Lights when the Auto Sound Retriever function is active (page 77).

19 Character display
Displays various system information.

20 Remote control mode indicator
Lights to indicate the receiver’s remote control mode setting. (Not displayed when set to 1.) (page 106)
Front panel

1  ○ STANDBY/ON
   This switches between standby and on for this receiver.

2  INPUT SELECTOR dial
   Use to select an input function.

3  Indicators
   • MCACC PRO – Lights when EQ is set to ON in the AUDIO PARAMETER menu (page 77).
   • FL OFF – Lights when ‘off’ (nothing displayed) is selected with the display’s dimmer adjustment (page 84).
   • HDMI – Blinks when connecting an HDMI-equipped component; lights when the component is connected (page 33).
   • iPod iPhone – Lights to indicate iPod/iPhone is connected (page 43).

4  Character display
   See Display on page 59.

5  Remote sensor
   Receives the signals from the remote control (page 11).

6  MASTER VOLUME dial

7  Front panel controls
   To access the front panel controls, catch the sides of the door with your fingers and pull forward.

8  AUDIO PARAMETER
   Use to access the Audio options (page 77).

9  ↑ / ↓ / ← / → (TUNE/PRESET) / ENTER
   Use the arrow buttons when setting up your HOME MENU. Use TUNE ↑ / ↓ to find radio frequencies and use
   PRESET ← / → to find preset stations (page 58).

10 VIDEO PARAMETER
   Use to access the Video options (page 79).

11 MULTI-ZONE controls
   If you’ve made MULTI-ZONE connections (page 59) use these controls to control the sub zone from the main
   zone (page 39).

12 SPEAKERS
   Use to change the speaker terminal (page 81).

13 iPod iPhone DIRECT CONTROL
   Change the receiver’s input to the iPod and enable iPod operations on the iPod (page 55).

14 AUTO SURR/ALC/STREAM DIRECT
   Switches between Auto Surround (page 67), Auto Level Control and Stream Direct mode (page 63).

15 STATUS
   Displays the IP address and information such as selected/set functions and the input signal on the display (page 84).

16 TUNER controls
   • BAND – Switches between AM and FM radio bands (page 59).
   • TUNER EDIT – Use with TUNE ↑ / ↓, PRESET ← / → and ENTER to memorize and name stations for recall
     (page 59).

17 HOME MENU
   Use to access the Home Menu (pages 51, 50, 73, 93 and 101).

18 RETURN
   Press to confirm and exit the current menu screen.

19 PHONES jack
   Use to connect headphones. When the headphones are connected, there is no sound output from the speakers.

20 MCACC SETUP MIC jack
   Use to connect the supplied microphone (page 48).
21 iPod/iPhone terminals
Use to connect your Apple iPod/iPhone as an audio source (page 43), or connect a USB device for audio and photo playback (page 43).

22 HDMI 5 INPUT terminal
Use for connection to a compatible HDMI device (Video camera, etc.) (page 44).

Connecting your equipment

This receiver provides you with many connection possibilities, but it doesn’t have to be difficult. This chapter explains the kinds of components you can connect to make up your home theater system.

⚠️ **CAUTION**
- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
- When making connections, also keep the power cords of the devices being connected unplugged from the power outlets.
- Depending on the device being connected (CD, DVD or BD player, etc.), the methods of connection and terminal names may differ from the explanations in this manual. Also refer to the operating instructions of the respective devices.

### Rear panel

![Rear panel diagram]

#### Notes
- The RS-232C terminal is exclusively for the installer.
- The input functions below are assigned by default to the receiver’s different input terminals. Refer to The Input Setup menu on page 59 to change the assignments if other connections are used.

Determining the speakers’ application

This unit is equipped with speaker terminals for 11 channels, allowing users to select a variety of speaker layouts/usage patterns according to their tastes. The terminals to which the speakers should be connected differ according to the speaker layout/usage pattern. Select one speaker layout/usage pattern before connecting the speakers. For instructions on connections, see Installing your speaker system on page 26.

However, the 5.2 +ZONE 2+ZONE 3 and Multi-ZONE Music settings can be used separately according to the situation. Normally set this to 5.2 +ZONE 2+ZONE 3 and use this for multi-zone/multi-source playback, and when using the system for home parties for example, set this to Multi-ZONE Music to associate all zones with the main zone.

- Be sure to connect speakers to the front left and right channels (L and R).
- It is also possible to only connect one of the surround back speakers (SB) or neither.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal.
- Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction.
- A sound field appropriate to any type of speaker placement can be enjoyed with Dolby Atmos. However, we recommend a speaker system with ceiling speakers for a better sound field.

**Important**

- The Speaker System setting must be made if you use any of the connections shown below other than [A] (see Speaker system setting on page 101).
- The speakers from which sound is output can be switched according to the speaker layout/usage pattern (sound is not necessarily output from all connected speakers). Use the OUT P. button to switch the speakers from which sound is output. For details, see Switching the speaker terminals on page 81.

**[A] 9.2 channel surround system (Top middle/Front wide) connection**

*Default setting*

- Speaker System setting: 7.2.2ch T Md/FW

A 9.2 ch surround system connects the left and right front speakers (L/R), the center speaker (C), the left and right top middle speakers (T MdL/T MdR), the left and right front wide speakers (FWL/FWR), the left and right surround speakers (SL/SR), the left and right surround back speakers (SBL/SBR), and the subwoofers (SW 1/SW 2). Dolby Enabled Speaker can be used for the top middle speakers. It is not possible to produce sound simultaneously from the top middle speakers and the front wide speakers. This surround system produces a more true-to-life sound from above.

The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 81.

**[B] 9.2 channel surround system (Top middle/Front height) connection**

- Speaker System setting: 7.2.2ch T Md/FH

A 9.2 ch surround system connects the left and right front speakers (L/R), the center speaker (C), the left and right top middle speakers (T MdL/T MdR), the left and right front height speakers (FHL/FHR), the left and right surround speakers (SL/SR), the left and right surround back speakers (SBL/SBR), and the subwoofers (SW 1/SW 2). Dolby Enabled Speaker can be used for the top middle speakers. It is not possible to produce sound simultaneously from the top middle speakers and the front height speakers. This surround system produces a more true-to-life sound from above.

The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 81.

**[C] 9.2 channel surround system (Top forward/Top backward) connection**

- Speaker System setting: 5.2.4ch

A 9.2 ch surround system connects the left and right front speakers (L/R), the center speaker (C), the left and right top forward speakers (TFwL/TFwR), the left and right top backward speakers (TBwL/TBwR), the left and right surround speakers (SL/SR), and the subwoofers (SW 1/SW 2). Also, Dolby Enabled Speaker can be used for the top forward speakers and top backward speakers. This surround system produces a more true-to-life sound from above.
[D] 7.2 channel surround system & Speaker B connection

- **Speaker System setting:** 7.2ch + Speaker B

With these connections you can simultaneously enjoy 7.2-channel surround sound in the main zone with stereo playback of the same sound on the B speakers. The same connections also allow for 9.2-channel surround sound in the main zone when not using the B speakers. The speakers from which sound is output can be switched using the **OUT P.** button. For details, see Switching the speaker terminals on page 81.

[E] 7.2 channel surround system & Front Bi-amping connection (High quality surround)

- **Speaker System setting:** 7.2ch + Front Bi-Amp

Bi-amping connection of the front speakers for high sound quality with 7.2-channel surround sound.

[F] 7.2 channel surround system & HDZONE connection (Multi Zone)

- **Speaker System setting:** 7.2ch + HDZONE

With these connections you can simultaneously enjoy 7.2-channel surround sound in the main zone with stereo playback on another component in HDZONE. (The selection of input devices is limited.) This speaker layout/usage pattern provides 7.2-channel playback using the surround back channels in the main zone.

[G] 5.2 channel surround system & Front Bi-amping connection (High quality surround) & HDZONE connection (Multi Zone)

- **Speaker System setting:** 5.2 Bi-Amp+HDZONE

With these connections you can simultaneously enjoy Bi-amping connection of the front speakers for high sound quality with 5.2-channel surround sound in the main zone with stereo playback on another component in HDZONE. (The selection of input devices is limited.)
Connecting your equipment

[H-1] 5.2 channel surround system & ZONE 2/ZONE 3 connection (Multi Zone)
[H-2] 5.2 channel surround system & ZONE 2/HDZONE connection (Multi Zone)
[H-3] Multi-ZONE Music connection

- [H-1] Speaker System setting: 5.2 +ZONE 2+ZONE 3
- [H-2] Speaker System setting: 5.2 +ZONE 2+HDZONE
- [H-3] Speaker System setting: Multi-ZONE Music

With these connections, you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback on another component in ZONE 2, ZONE 3, and HDZONE. (The selection of input devices is limited.) However, the 5.2 +ZONE 2+ZONE 3, 5.2 +ZONE 2+HDZONE, and Multi-ZONE Music settings can be used separately according to the situation. Normally set this to 5.2 +ZONE 2+ZONE 3 or 5.2 +ZONE 2+HDZONE and use this for multi-zone/multi-source playback, and when using the system for home parties for example, set this to Multi-ZONE Music to associate all zones with the main zone.

[I] 5.2 channel surround system & Speaker B Bi-amping connection

- Speaker System setting: 5.2ch + SP-B Bi-Amp

With these connections, you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback of the same sound on the B speakers. The B speakers can be bi-amped to achieve high quality sound. The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 81.

[J] 5.2 channel surround system & Front and Surround Bi-amping connection (High quality surround)

- Speaker System setting: 5.2ch F+Surr Bi-Amp

Bi-amping connection of the front and surround speakers for high sound quality with 5.2-channel surround sound.

[K] 5.2 channel surround system & Front and Center Bi-amping connection (High quality surround)

- Speaker System setting: 5.2ch F+C Bi-Amp

Bi-amping connection of the front and center speakers for high sound quality with 5.2-channel surround sound.
[L] 5.2 channel surround system & Center and Surround Bi-amping connection (High quality surround)

- Speaker System setting: 5.2ch C-Surr Bi-Amp

Bi-amping connection of the center and surround speakers for high sound quality with 5.2-channel surround sound.

Other speaker connections

- Your favorite speaker connections can be selected even if you have fewer than 5.2 speakers (except front left/right speakers).
- When not connecting a subwoofer, connect speakers with low frequency reproduction capabilities to the front channel. (The subwoofer’s low frequency component is played from the front speakers, so the speakers could be damaged.)
- After connecting, be sure to conduct the Full Auto MCACC (speaker environment setting) procedure. See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48.

Dolby Enabled Speaker

Dolby enabled speakers bring a new sense of height and immersion to the listening experience without installation of overhead speakers.

Placing the speakers

Refer to the chart below for placement of the speakers you intend to connect.

Listener speaker placement guidelines

Listener speakers, such as Left, Right, Center, Left Surround, and Right Surround, are placed at ear level relative to the listener position.

- Place the surround speakers at 120° from the center. If you, (1) use the surround back speaker, and, (2) don’t use the front height speakers / front wide speakers, we recommend placing the surround speaker right beside you.
- If you intend to connect only one surround back speaker, place it directly behind you.
- Place the left and right front height speakers at least one meter directly above the left and right front speakers.

Top speaker placement guidelines

Top speakers, such as Top Forward (TFwL, TFwR), Top Middle (TMDL, TMdR) or Top Backward (TBwL, TBwR), are placed above the listener position on the ceiling.

- All top speaker pairs should preferably be mounted along a vertical line that is a ±30° horizontal from the center-front reference. However, these speakers may be placed as far as the side walls and anywhere between the side walls and the middle of the room, if needed.
- We also recommend that the top forward speakers and top backward speakers be installed at a symmetrical distance from the front and rear of right above, respectively.
The height of the Top Forward, Top Middle and Top Backward speakers mounted on the ceiling should preferably be no more than three times the height and no less than two times the height of the front speakers at listener height.

The Top Forward, Top Middle and Top Backward speakers should be directed straight down, rather than directed at a central listener position.

We recommend that the top middle speakers be installed slightly forward from right above.

Some tips for improving sound quality
Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.

- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.
- For the best stereo effect, place the front speakers 2 m to 3 m apart, at equal distance from the TV.
- If you’re going to place speakers around your CRT TV, use shielded speakers or place the speakers at a sufficient distance from your CRT TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround and surround back speakers should be positioned 60 cm to 90 cm higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.
- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.

Connecting the speakers
Each speaker connection on the receiver comprises a positive (+) and negative (−) terminal. Make sure to match these up with the terminals on the speakers themselves.

This unit supports speakers with a nominal impedance of 4 Ω to 16 Ω.

**CAUTION**
- These speaker terminals carry **HAZARDOUS LIVE** voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.

Bare wire connections
Make sure that all speakers are securely installed. This not only improves sound quality, but also reduces the risk of damage or injury resulting from speakers being knocked over or falling in the event of external shocks such as earthquakes.

1. Twist exposed wire strands together.
2. Loosen terminal and insert exposed wire.
3. Tighten terminal.

**Notes**
- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
- If you have two subwoofers, the second subwoofer can be connected to the **SUBWOOFER 2** terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction.
**Biamping your speakers**

Biamping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you’re using.

**Bi-wiring your speakers**

Your speakers can also be bi-wired if they support bi-amping.

- With these connections, the Speaker System setting makes no difference.

**CAUTION**

- Don’t connect different speakers from the same terminal in this way.
- When bi-wiring as well, heed the cautions for bi-amping shown above.
- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver.

---

**CAUTION**

- Most speakers with both High and Low terminals have two metal plates that connect the High to the Low terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.
- If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.
Installing your speaker system

At the very least, front left and right speakers only are necessary. Note that your main surround speakers should always be connected as a pair, but you can connect just one surround back speaker if you like (it must be connected to the left surround back terminal).

[A] 9.2 channel surround system (Top middle/Front wide) connection
- If necessary, select '7.2.2ch TMd/FW' from the Speaker System menu. See Speaker system setting on page 101 to do this.
- When only connecting one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.

[B] 9.2 channel surround system (Top middle/Front height) connection
- Select '7.2.2ch TMd/FH' from the Speaker System menu. See Speaker system setting on page 101 to do this.
- When only connecting one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.
[C] 9.2 channel surround system (Top forward/Top backward) connection

- Select 5.2.4ch from the Speaker System menu.
  See Speaker system setting on page 101 to do this.

![Diagram of 9.2 channel surround system connection]

[D] 7.2 channel surround system & Speaker B connection

- Select 7.2ch + Speaker B from the Speaker System menu.
  See Speaker system setting on page 101 to do this.
- When only connecting one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.
E) 7.2 channel surround system & Front Bi-amping connection (High quality surround)

- Select '7.2ch + Front Bi-Amp' from the Speaker System menu.
  See Speaker system setting on page 101 to do this.
- When only connecting one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.

F) 7.2 channel surround system & HDZONE connection (Multi Zone)

- Select '7.2ch + HDZONE' from the Speaker System menu.
  See Speaker system setting on page 101 to do this.
- When only connecting one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.
[G] 5.2 channel surround system & Front Bi-amping connection (High quality surround) & HDZONE connection (Multi Zone)

- Select 5.2 Bi-Amp+HDZONE from the Speaker System menu.
  See Speaker system setting on page 101 to do this.

![Diagram of speaker system connections]

- Bi-amp compatible speaker
  Front right
  Center
  Front left
  Subwoofer 1
  Subwoofer 2

[3.2 channel surround system & Front Bi-amping connection (High quality surround) & HDZONE connection (Multi Zone)]

- [H-1] Speaker System setting: 5.2 +ZONE 2+ZONE 3
- [H-2] Speaker System setting: 5.2 +ZONE 2+HDZONE
- [H-3] Speaker System setting: Multi-ZONE Music

See Speaker system setting on page 101 to do this.
[I] 5.2 channel surround system & Speaker B Bi-amping connection

- Select 5.2ch + SP-B Bi-Amp from the Speaker System menu.
- See Speaker system setting on page 101 to do this.

[J] 5.2 channel surround system & Front and Surround Bi-amping connection (High quality surround)

- Select 5.2ch F+Surr Bi-Amp from the Speaker System menu.
- See Speaker system setting on page 101 to do this.
[K] 5.2 channel surround system & Front and Center Bi-amping connection (High quality surround)

- Select '5.2ch F+C Bi-Amp' from the Speaker System menu.
  See Speaker system setting on page 101 to do this.

[L] 5.2 channel surround system & Center and Surround Bi-amping connection (High quality sound)

- Select '5.2ch C+Surr Bi-Amp' from the Speaker System menu.
  See Speaker system setting on page 101 to do this.
### About the audio connection

<table>

</table>

- With an HDMI cable, video and audio signals can be transferred in high quality over a single cable.
- For HD audio, see About HDMI on page 33.

### About the video converter

The video converter ensures that all video sources are output through the **HDMI OUT 1** and **HDMI OUT 2** terminals.

If the TV is only connected to the receiver’s composite **VIDEO MONITOR OUT** jacks, all the other video devices must be connected through composite connections.

- If several video components are assigned to the same input function (see The Input Setup menu on page 50), the converter gives priority to HDMI, component, then composite (in that order).

**Notes**

- With factory default settings, video from the video cable or component cable will not be output from the HDMI terminal. To output video, you must switch video input to the device connected with the video cable or component cable and set **V.CONV** to **ON** (page 79).
- The only exception is HDMI: since this resolution cannot be downsampled, you must connect your monitor/TV to the receiver’s HDMI output when connecting this video source.
- If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, try switching Digital Video Conversion (in Setting the Video options on page 79) **OFF**.
- The signal input resolutions that can be converted from the component video input for the HDMI output are 480i/576i, 480p/576p, 720p and 1080i. **1080p** signals cannot be converted.

This item incorporates copy protection technology that is protected by U.S. patents and other intellectual property rights of Rovi Corporation. Reverse engineering and disassembly are prohibited.
About HDMI

The HDMI connection transfers uncompressed digital video, as well as almost every kind of digital audio. This receiver incorporates High-Definition Multimedia Interface (HDMI™) technology. This receiver supports the functions described below through HDMI connections.

- Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
- 3D signal transfer
- Deep Color signal transfer
- x.v.Color signal transfer
- ARC (Audio Return Channel)
- 4K signal transfer

— This may not operate properly, depending on the connected equipment.
— 4K 24p, 4K 25p, 4K 30p, 4K 50p and 4K 60p signals are supported.
- Input of multi-channel linear PCM digital audio signals (192 kHz or less) for up to 8 channels
- Input of the following digital audio formats:
  - Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio, DTS-HD High Resolution Audio), CD, Sacd (DSD signal), OBJECT based audio (Atmos)
- Synchronized operation with components using the Control with HDMI function (see page 73)

Notes

- An HDMI connection can only be made with DVI-equipped components compatible with both DVI and High Bandwidth Digital Content Protection (HDCP). If you choose to connect to a DVI connector, you will need a separate adaptor (DVI-HDMI) to do so. A DVI connection, however, does not support audio signals. Consult your local audio dealer for more information.
- If you connect a component that is not compatible with HDCP, an HDCP ERROR message is displayed on the front panel display. Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video this is not a malfunction.
- Depending on the component you have connected, using a DVI connection may result in unreliable signal transfers.
- This receiver supports SACD, Dolby Digital Plus, Dolby TrueHD and DTS-HD Master Audio. To take advantage of these formats, however, make sure that the component connected to this receiver also supports the corresponding format.
- Use a High Speed HDMI™ Cable. If an HDMI cable other than a High Speed HDMI™ Cable is used, it may not work properly.
- When an HDMI cable with a built-in equalizer is connected, it may not operate properly.
- Signal transfer is only possible when connected to a compatible component.
- HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
- Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

— The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

“x.v.Color” and “x.v.Color” are trademarks of Sony Corporation.
**Connecting your equipment**

- **When connecting to an HDMI/DVI-compatible monitor using the HDMI OUT 2 terminal,** switch the HDMI output setting to OUT 2 or OUT 1+2. See **Switching the HDMI output** on page 82.
  - In the same way, when an HDMI/DVI-compatible monitor is connected to the HDMI OUT 3 terminal, switch the HDMI OUT 3 setting to ON (page 82). In this case, MAIN/HDZONE at ZONE Setup must be set to MAIN (page 107).

- **For input components,** connections other than HDMI connections are also possible (see **Connecting your DVD player with no HDMI output** on page 34).

- **If you want to listen to the sound of the TV over the receiver,** connect the receiver and TV with audio cables.
  - When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see **HDMI Setup** on page 73).
  - After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
  - If using a coaxial digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital or analog audio input you connected the TV to (see **The Input Setup menu** on page 50).
  - Please refer to the TV’s operation manual for directions on connections and setup for the TV.

- **If the TV to be connected using HDMI supports 4K/60p,** you can switch the 4K/60p signal output setting in accordance with TV performance. When the 4K/60p setting is changed to 4:4:4, the video image may not be output normally unless the HDMI cable supports 4K/60p 4:4:4 24 bit (18 Gbps transmission). In such a case, select 4:2:0 (page 82).

- You cannot input 4K/60p 4:4:4 24 bit video from HDMI IN 3 to the IN 7 terminal. Use the BD IN, HDMI IN 1 or HDMI IN 2 terminal.

- **The HDMI OUT 3 terminal outputs 4K/60p 4:4:4 24 bit video when MAIN/HDZONE is set to MAIN.** When it is set to HDZONE, the 4K/60p 4:4:4 24 bit video is not output.

---

### Connecting your DVD player with no HDMI output

This diagram shows connections of a TV (with HDMI input) and DVD player (or other playback component with no HDMI output) to the receiver.

- With factory default settings, video from the video cable or component cable will not be output from the HDMI terminal. To output video, you must switch video input to the device connected with the video-cable or component cable and set V.CONV to ON (page 79).

- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 33).
  - When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see **HDMI Setup** on page 79).

- If you use an optical digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the player to (see **The Input Setup menu** on page 50).

- If HDZONE is set to on, video images connected using a video cable or component cable are not output from the HDMI terminal. To output video images, turn HDZONE off (page 83).
Connecting your TV with no HDMI input

This diagram shows connections of a TV (with no HDMI input) and DVD player (or other playback component) to the receiver.

**Important**
- With these connections, the picture is not output to the TV even if the DVD player is connected with an HDMI cable. Connect the receiver and TV using the same type of video cable as used to connect the receiver and player.
- Also, when the receiver and TV are connected by anything other than an HDMI cable, the OSD function allowing display of the receiver’s settings, operations, etc., on the TV’s screen cannot be used. In this case, watch the receiver’s front panel display while performing the various operations and making settings.

In order to listen to HD audio with this receiver, connect an HDMI cable, and use analog video cable for video signal input. Depending on the player, it may not be possible to output video signals to both HDMI and other video output (composite, etc.) simultaneously, and it may be necessary to make video output settings. Please refer to the operating instructions supplied with your player for more information.

If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 33).

If you use an optical digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the player to (see The Input Setup menu on page 50).

Connecting an HDD/DVD recorder, BD recorder and other video sources

This receiver has audio/video inputs suitable for connecting analog or digital video devices, including HDD/DVD recorders and BD recorders. When you set up the receiver you’ll need to tell the receiver which input you connected the recorder to (see also The Input Setup menu on page 50).

In order to record, you must connect the analog audio cables (the digital connection is for playback only) (page 84).
If your HDD/DVD recorder, BD recorder, etc., is equipped with an HDMI output terminal, we recommend connecting it to the receiver’s HDMI DVR/BDR IN terminal. When doing so, also connect the receiver and TV by HDMI (see Connecting using HDMI on page 33).

With factory default settings, video from the video cable or component cable will not be output from the HDMI terminal. To output video, you must switch video input to the device connected with the video cable or component cable and set V.Conv to ON (page 79).

If HDZONE is set to on, video images connected using a video cable or component cable are not output from the HDMI terminal. To output video images, turn HDZONE off (page 83).

Connecting a satellite/cable receiver or other set-top box

Satellite and cable receivers, and terrestrial digital TV tuners are all examples of so-called ‘set-top boxes’. When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Setup menu on page 50).
• If your set-top box is equipped with an HDMI output terminal, we recommend connecting it to the receiver’s HDMI SAT/CBL IN terminal. When doing so, also connect the receiver and TV by HDMI (see Connecting using HDMI on page 33).

• Even if your set-top box is equipped with an HDMI output terminal, in some cases the sound is output from the digital audio output (optical or coaxial) and only the video is output from the HDMI output terminal. In this case, make the HDMI and digital audio connections as shown below.

— If you use a digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the set-top box to (see The Input Setup menu on page 50).

Connecting other audio components

This receiver has both digital and analog inputs, allowing you to connect audio components for playback. When you set up the receiver you’ll need to tell the receiver which input you connected the component to (see also The Input Setup menu on page 50).

• If your turntable has line-level outputs (i.e., it has a built-in phono pre-amp), connect it to the ANALOG IN 1 (CD) inputs instead.

• You can’t hear HDMI audio through this receiver’s digital out jack.
Connecting additional amplifiers

This receiver has more than enough power for any home use, but it’s possible to add additional amplifiers to every channel of your system using the pre-outs. Make the connections shown below to add amplifiers to power your speakers.

- If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 92) to LARGE.
- You can use the additional amplifier on the surround back channel pre-outs for a single speaker as well. In this case plug the amplifier into the left (SURROUND BACK L (Single)) terminal only.
- The sound from the surround back terminals will depend on how you have configured the Speaker system setting on page 101.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction.
- To hear sound only from the pre-outs, switch the speaker terminals to SP OFF (page 81) or simply disconnect any speakers that are connected directly to the receiver. It is also possible to hear sound only from the pre-outs by switching the AMP setting to OFF and setting the pre-amp mode to turn the power amplifiers for all channels off (see Setting the Audio options on page 77).

Connecting AM/FM antennas

Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Connecting external antennas on page 39).

1 Pull off the protective shields of both AM antenna wires.
2 Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3 Fix the AM loop antenna to the attached stand.
   To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
   - If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4 Place the AM antenna on a flat surface and in a direction giving the best reception.
5 Connect the FM wire antenna into the FM antenna socket.
   For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.
Connecting external antennas

To improve FM reception, connect an external FM antenna to FM UNBAL 75 Ω.

To improve AM reception, connect a 5 m to 6 m length of vinyl-coated wire to the AM LOOP terminals without disconnecting the supplied AM loop antenna.

For the best possible reception, suspend horizontally outdoors.

MULTI-ZONE setup

This receiver can power up to four independent systems in separate rooms after you have made the proper MULTI-ZONE connections.

Different sources can be playing in four zones at the same time or, depending on your needs, the same source can also be used. The main and sub zones have independent power (the main zone power can be off while one (or both) of the sub zones is on) and the sub zones can be controlled by the remote or front panel controls.

Making MULTI-ZONE connections

It is possible to make these connections if you have a separate subwoofer and speakers for your primary (ZONE 2) sub zone, and a separate amplifier (and speakers) for your secondary (ZONE 3) sub zone. You will also need a separate amplifier if you are not using the speaker terminals for your primary sub zone (For detail, see MULTI-ZONE setup using speaker terminals (ZONE 2) on page 40).

Also, if the separate receiver in the sub zone has an HDMI input terminal, this unit’s HDMI input can be played as HDZONE.

Here are three primary sub zone setups possible with this system. Choose whichever works best for you.

Important

- The settings must be changed at ZONE Setup in order to use the multi-zone function (page 107).
- MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 107).

MULTI-ZONE listening options

The following table shows the signals that can be output to ZONE 2, ZONE 3 and HDZONE:

<table>
<thead>
<tr>
<th>Sub Zone</th>
<th>Input functions available</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZONE 2 (SAT/CBL, DVR/BDR, INTERNET RADIO, MEDIA SERVER, FAVORITES, iPod/USB, TV, CD, TUNER, ADAPTER PORT)</td>
<td>Outputs analog audio</td>
</tr>
<tr>
<td>ZONE 3 (SAT/CBL, DVR/BDR, TV, CD, TUNER, ADAPTER PORT)</td>
<td>Outputs analog audio</td>
</tr>
<tr>
<td>HDZONE (BD, DVD, SAT/CBL, DVR/BDR, INTERNET RADIO, MEDIA SERVER, FAVORITES, iPod/USB, HDMI 1, HDMI 2, HDMI 3, HDMI 4, HDMI 5, HDMI 6, HDMI 7/MHL)</td>
<td>Outputs HDMI audio and video signals</td>
</tr>
</tbody>
</table>

- It is not possible to down-convert the audio input signal from the HDMI input terminals or digital input terminals (OPTICAL and COAXIAL) and output them to ZONE 2.
- It is not possible to down-convert the audio input signal from the HDMI input terminals or digital input terminals (OPTICAL and COAXIAL) and output them to ZONE 3.
- The inputs that can be switched differ according to how terminals HDMI IN 1 to IN 7 are assigned. Upon shipment from the factory, the input terminals are assigned to DVD, SAT/CBL, DVR/BDR, HDMI 4, HDMI 5, HDMI 6 and HDMI 7/MHL, in order starting from terminal HDMI IN 1.
- The video/audio signals of the RCA analog input terminals, the digital input terminals (OPTICAL and COAXIAL) and the COMPONENT VIDEO input terminals cannot be up-converted and output to the HDZONE.
- When any of the HDMI 3 to HDMI 7/MHL inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the HDZONE. (Inputs other than the ones listed here can be selected.)

The same limitations apply when one of the above inputs is selected for the HDZONE.

Note

When any of the INTERNET RADIO, MEDIA SERVER, FAVORITES, iPod/USB or ADAPTER PORT inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the sub zone. (Inputs other than the ones listed here can be selected.)

The same limitations apply when one of the above inputs is selected for the sub zone.
Basic MULTI-ZONE setup (ZONE 2)
1. Connect a separate amplifier to the AUDIO ZONE 2 OUT jacks on this receiver. You should have a pair of speakers attached to the sub zone amplifier as shown in the following illustration.
2. Connect a subwoofer to the SUBWOOFER ZONE 2 OUT jack on this receiver. When a subwoofer is connected, we recommend setting HPF (High Pass Filter) at ZONE Setup to ON (page 107).

MULTI-ZONE setup using speaker terminals (ZONE 2)
You must select ZONE 2 in Speaker system setting (page 101) to use this setup.
- Connect a pair of speakers to the surround back speaker terminals. You should have a pair of speakers attached to the surround back speaker terminals as shown below.

Secondary MULTI-ZONE setup (ZONE 3)
- Connect a separate amplifier to the AUDIO ZONE 3 OUT jacks on this receiver. You should have a pair of speakers attached to the sub zone amplifier as shown in the following illustration.
Secondary MULTI-ZONE setup using speaker terminals (ZONE 3)
You must select 5.2+ZONE 2+ZONE 3 in Speaker system setting on page 101 to use this setup.
- Connect a pair of speakers to the front wide speaker terminals.

![Diagram showing connections](image)

MULTI-ZONE setup using HDMI terminal (HDZONE)

**Important**
- MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 107).
- To use the HDZONE functions, set Control or Control Mode in HDMI Setup to OFF. For details, see HDMI Setup on page 73.
- You must select HDZONE in Speaker system setting (page 101) to use this setup.

1. Connect a pair of speakers to the surround back speaker terminals.
   You should have a pair of speakers attached to the surround back speaker terminals as shown below.
2. Connect a TV monitor to the HDMI OUT 3 (HDZONE) terminal on this receiver.

![Diagram showing connections](image)

Multi-zone connection using the HDMI terminal and speaker terminals (HDZONE)

**Important**
- The settings must be changed at ZONE Setup in order to use the HDZONE function (page 107).
- To use the HDZONE functions, set Control or Control Mode in HDMI Setup to OFF. For details, see HDMI Setup on page 73.
- You must select HDZONE in Speaker system setting (page 101) to use this setup.

1. Connect a pair of speakers to the front wide speaker terminals.

![Diagram showing connections](image)

2. Connect a TV monitor to the HDMI OUT 3 (HDZONE) terminal on this receiver.

![Diagram showing connections](image)
Connecting to the network through LAN interface

By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations. To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand. When connected in this way, you can play audio files stored on the components on the local network, including your computer.

Connect the LAN terminal on this receiver to the LAN terminal on your router (with or without the built-in DHCP server function) with a straight LAN cable (CAT 5 or higher).

LAN terminal specifications
- LAN terminal : Ethernet jack (10BASE-T/100BASE-TX)

Notes
- Refer to the operation manual of the equipment you have as the connected equipment and connection method may differ depending on your Internet environment.
- When using a broadband Internet connection, a contract with an Internet service provider is required. For more details, contact your nearest Internet service provider.

Connecting optional Bluetooth ADAPTER

When the Bluetooth® ADAPTER (AS-BT100 or AS-BT200) is connected to this receiver, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly.
- The Bluetooth wireless technology enabled device must support A2DP profiles.
- Pioneer does not guarantee proper connection and operation of this unit with all Bluetooth wireless technology enabled devices.

Important
- Do not move the receiver with the Bluetooth ADAPTER connected. Doing so could cause damage or faulty contact.
- Switch the receiver into standby and connect Bluetooth ADAPTER to the ADAPTER PORT.
- For instructions on playing the Bluetooth wireless technology device, see Pairing the Bluetooth ADAPTER and Bluetooth wireless technology device on page 60.
Connecting your equipment

Connecting an iPod
This receiver has a dedicated iPod terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver.

- An iPod/iPhone can be connected to the receiver. For details on supported models and versions of the respective products, see Playing an iPod on page 55.
- Switch the receiver into standby, and then use the iPod cable to connect your iPod to the iPod/iPhone terminal on the front panel of this receiver.
- For the cable connection, also refer to the operating instructions for your iPod.
- When connecting an iPhone to this unit, keep the iPhone at least 20 cm away from this unit. If the iPhone is kept closer to this unit and a telephone call is received by the iPhone, noise may be output from this device.
- iPod recharging occurs whenever an iPod is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
- For instructions on playing the iPod, see Playing an iPod on page 55.

Connecting a USB device
It is possible to play audio and photo files by connecting USB devices to this receiver.

- Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.
- This receiver does not support a USB hub.
- For instructions on playing the USB device, see Playing a USB device on page 56.
Connecting an MHL-compatible device

An MHL-compatible mobile device can be connected to enjoy 3D/Full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver. Use the MHL cable to connect the device.

- Switch the receiver into standby then use the MHL cable to connect your MHL enabled device to the MHL terminal on the rear panel of this receiver.
  - To automatically switch to the MHL input when an MHL-compatible device is connected, see MHL Setup on page 105.
  - The MHL-compatible device is recharged whenever it is connected to this unit. (Recharging is enabled only when the unit's power is turned on.)
  - For instructions on playing the MHL-compatible device, see Playing an MHL-compatible device on page 58.
  - Do not place the MHL device on this unit which has the power turned on.

Connecting an HDMI-equipped component to the front panel input

Connecting to a wireless LAN

Wireless connection to the network is possible through a wireless LAN connection. Use the separately sold AS-WL300 for connection.

- Use only the furnished accessory connecting cable.
- Certain settings are required to use a wireless LAN converter (AS-WL300). For instructions on making these settings, see the operating instructions included with the wireless LAN converter (AS-WL300).
**Connecting an IR receiver**

If you keep your stereo components in a closed cabinet or shelving unit, or you wish to use the sub zone remote control in another zone, you can use an optional IR receiver (such as a Niles or Xantech unit) to control your system instead of the remote sensor on the front panel of this receiver.

- Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
- Note that other manufacturers may not use the IR terminology. Refer to the manual that came with your component to check for IR compatibility.
- If using two remote controls (at the same time), the IR receiver’s remote sensor takes priority over the remote sensor on the front panel.

1. Connect the IR receiver sensor to the IR IN jack on the rear of this receiver.

2. Connect the IR IN jack of another component to the IR OUT jack on the rear of this receiver to link it to the IR receiver.

   Please see the manual supplied with your IR receiver for the type of cable necessary for the connection.

---

**Switching components on and off using the 12 volt trigger**

You can connect components in your system (such as a screen or projector) to this receiver so that they switch on or off using 12 volt triggers when you select an input function. However, you must specify which input functions switch on the trigger using the The Input Setup menu on page 50. Note that this will only work with components that have a standby mode.

1. Connect the 12 V TRIGGER jack of this receiver to the 12 V trigger of another component. Use a cable with a mono mini-plug on each end for the connection.

   After you’ve specified the input functions that will switch on the trigger, you’ll be able to switch the component on or off just by pressing the input function(s) you’ve set on page 50.

   **Note**

   - The 12V trigger can be associated not only with switching of the input function but also with switching of the HDMI OUT terminal. For details, see HDMI Setup on page 73.

**Plugging in the receiver**

Only plug in after you have connected all your components to this receiver, including the speakers.

**CAUTION**

- Handle the power cord by the plug part. Do not pull out the plug by tugging the cord, and never touch the power cord when your hands are wet, as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, or other object on the power cord or pinch the cord in any other way. Never make a knot in the cord or tie it with other cables. The power cords should be routed so that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electric shock. Check the power cord once in a while. If you find it damaged, ask your nearest Pioneer authorized independent service company for a replacement.
- Do not use any power cord other than the one supplied with this unit.
- Do not use the supplied power cord for any purpose other than that described below.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.
- Make sure the blue STANDBY/ON light has gone out before unplugging.

1. Plug the supplied power cord into the AC IN socket on the back of the receiver.
2. Plug the other end into a power outlet.
Basic Setup

How to use the built-in AVNavigator ................................................................. 47
Automatically conducting optimum sound tuning (Full Auto MCACC) .................. 48
The Input Setup menu .................................................................................... 50
Operation Mode Setup .................................................................................. 51
Changing the OSD display language (OSD Language) ..................................... 51
Changing the TV format setting .................................................................... 52
Changing the frequency step ....................................................................... 52
About the Home Menu .................................................................................. 52
How to use the built-in AVNavigator

The built-in AVNavigator is equipped with Wiring Navi, which allows you to perform connection of this receiver and initial settings in interactive mode. By simply following the screen prompts to connect and set the unit, highly accurate initial settings can be performed easily. Additionally, in order to use various functions easily, contents linked to the receiver can be used.

Operating Environment

- AVNavigator can be used in the following environments.
  - Windows PC: Microsoft® Windows® XP/Windows Vista®/Windows® 7/Windows® 8/Windows® 8.1
  - Mac: Mac OS X (10.7, 10.8 or 10.9)
  - iPad/iPhone/iPod touch: iOS 7
  - Android device: Android 4.0.4, 4.1.1, 4.1.2, 4.2, 4.2.2, 4.4.2
- AVNavigator uses an Internet browser. The following browsers are supported:
  - Windows PC: Internet Explorer® 8, 9, 10, 11
  - Mac/iPad/iPhone/iPod touch: Safari 6.0
  - Android device: Android browser
- Depending on the computer network setting or security setting, AVNavigator may not operate.

Using AVNavigator

Important

- Connect the LAN terminal to the network (page 47).

1. Press \u23f3 STANDBY/ON to switch on the receiver and your computer.

2. Launch AVNavigator.

   Operate AVNavigator by following the screen prompts of your computer, etc.
   - If using a Windows PC, complete the below steps to start up.
     1. Start up Internet Explorer on your PC (open any random Internet page).
     2. Press STATUS on the remote control and check the front panel display on the receiver (the IP address of the receiver will appear).

   (Example Text Display)

   ![Example Text Display](image)

   If 0.0.0.0 or 169.254.112.202 appears in the address, it indicates that the receiver is not connected to the network. Check to make sure that the receiver and router are properly connected.

   3. Enter number in (2) above in the field in Internet Explorer shown below and then press the ENTER key.

   ![Example Input Format](image) 192.168.0.124

- With a Windows PC other than Windows XP, you can use the following method to launch AVNavigator.
  Launch Explorer and right-click <SC-LX58> displayed in the ‘Network’ folder, then click ‘View device webpage’.

- On a Mac, launch Safari and click <SC-LX58> displayed in ‘Bonjour’ on the Bookmarks bar.

---

---
When using an iPad/iPhone/iPod touch, from the App Store, download iControlAV5, which is a free application. After launching iControlAV5, follow the instructions on the screen. After that, on the Home screen, tap ‘AVNavigator’ or the icon.

- On an iPad, you can operate AVNavigator for iPad. Download AVNavigator for iPad from the App Store. After launching AVNavigator for iPad, follow the instructions on the screen.
- When using an Android device, from Google Play Store, download iControlAV5, which is a free application. After launching iControlAV5, follow the instructions on the screen. After that, on the Home screen, tap the icon.

3 Select and use the desired function.
AVNavigator includes the following functions:
- Wiring Navi – Guides you through connections and initial settings in dialog fashion. High precision initial settings can be made easily.
- Interactive Operation Guide – The receiver will be operated using the remote control on the screen and you can view function explanations or videos. Explanations of the functions that are operated using the remote control are also automatically displayed.
- Network Setup – Used to make network-related settings.

Automatically conducting optimum sound tuning (Full Auto MCACC)
The Full Auto MCACC Setup measures the acoustic characteristics of your listening area, taking into account ambient noise, speaker connection and speaker size, and tests for both channel delay and channel level. When Measurement Type is Expert, in addition to this, Standing Wave, EQ and Full Band Phase Control are measured. After you have set up the microphone provided with your system, the receiver uses the information from a series of test tones to optimize the speaker settings and equalization for your particular room.

Important
- Make sure the microphone and speakers are not moved during the Full Auto MCACC Setup.
- Using the Full Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.
- Before using the Full Auto MCACC Setup, the headphones should be disconnected.
- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 107) and HDMI output (page 82) settings.

CAUTION
- The test tones used in the Full Auto MCACC Setup are output at high volume.
- Press STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.
- Connect the microphone to the MCACC SETUP MIC jack on the front panel.

Make sure there are no obstacles between the speakers and the microphone.
If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.
Install the microphone on a stable floor. Placing the microphone on any of the following surfaces may make accurate measurement impossible:
- Sofas or other soft surfaces.
- High places such as tabletops and sofa tops.
The Full Auto MCACC display appears once the microphone is connected.

1a. Full Auto MCACC

- If you leave the GUI screen for over five minutes, the screen saver will appear.
- Press MAIN RECEIVER to switch the remote control to the receiver operation mode.
- Select the parameters you want to set.

- If the speakers are connected using any setup other than 7.2.2ch TMd/FW, be sure to set Speaker System before the Full Auto MCACC Setup. See Speaker system setting on page 101.

- Speaker System – Shows the current settings. When this is selected and ENTER is pressed, the speaker system selection screen appears. Select the proper speaker system, then press RETURN to return. If you are planning on bi-amping your front speakers, or setting up a separate speaker system in another room, read through Speaker system setting on page 101 and make sure to connect your speakers as necessary before continuing to step 4.
- EQ Type – When you select Expert for Measurement Type, set the correction method of the frequency characteristics of the viewing environment. Usually, set SYMMETRY. For details, see Automatic MCACC (Expert) on page 93.
- MCACC – The six MCACC presets are used for storing surround sound settings for different listening positions. Simply choose an unused preset for now (you can rename it later in Data Management on page 98).
- Dolby Enabled Speaker – Select speakers that use Dolby Enabled Speaker (TFw+TBw, TFw, TMD, TBw).
- When Dolby Enabled Speaker is not used, select NO (page 78).
- SP to ceiling – When Dolby Enabled Speaker is used, enter the height from the speaker to the ceiling (page 23).
- Measurement Type – When Basic is set, the minimum required measurement is performed in a short period of time. When Expert is set, accurate and precise measurement is performed so it will take some time.

5 Select ‘START’, then press ENTER.

6 Follow the instructions on-screen.

7 Wait for the test tones to finish, then confirm the speaker configuration in the GUI screen.

A progress report is displayed on-screen while the receiver outputs test tones to determine the optimum receiver settings. Again, try to be as quiet as possible while this is happening. It may take 3 to 10 minutes.

8 Make sure 'OK' is selected, then press ENTER.

A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings. The configuration shown on-screen should reflect the actual speakers you have.

- If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑↓ to select the speaker and ←→ to change the setting and continue.
- If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected. If Reverse Phase is displayed, the speaker’s wiring (+ and −) may be inverted. Check the speaker connections.
- If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly.
- After this, perform the Full Auto MCACC procedure again.
- If the connections were right, select GO NEXT and continue.

9 The Full Auto MCACC Setup procedure is completed and the Home Menu menu reappears automatically.

Be sure to disconnect the microphone from this receiver upon completion of the Full Auto MCACC Setup. The settings made in the Full Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using The MCACC PRO menu on page 92 or The System Setup and Other Setup menu on page 100.

- Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 101.
- The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.
- If Full Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.
- The Dolby Enabled Speaker distance indicates the distance of the ceiling reflection. Therefore, it is longer than the direct distance but you do not need to change this (page 23).
- When Full Auto MCACC or Auto MCACC is selected, all of the EQ adjustment values for Dolby Enabled Speaker are set to 0 dB. You can adjust the settings manually.

Problems when using the Auto MCACC Setup

If the room environment is not optimal for the Auto MCACC Setup (too much background noise, echo off the walls, obstacles blocking the speakers from the microphone) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.), that may be affecting the environment and switch them off if necessary. If there are any instructions showing in the front panel display, please follow them.

- Some older TVs may interfere with the operation of the microphone. If this seems to be happening, switch off the TV when doing the Auto MCACC Setup.
The Input Setup menu

You only need to make settings in the Input Setup menu if you didn’t hook up your digital equipment according to the default settings (see Input function default and possible settings on page 50). In this case, you need to tell the receiver what equipment is hooked up to which terminal so the buttons on the remote control correspond to the components you’ve connected.

- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 107) and HDMI output (page 82) settings.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ← / → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘System Setup’ from the HOME MENU.

4. Select the input function that you want to set up.

   The default names correspond with the names next to the terminals on the rear panel (such as DVD or SAT/CBL which, in turn, correspond with the names on the remote control).

5. Select the input(s) to which you’ve connected your component.

   For example, if your DVD player only has an optical output, you will need to change the DVD input function’s Audio In setting from COAX-1 (default) to the optical input you’ve connected it to.

6. When you’re finished, proceed to the settings for other inputs.

   There are optional settings in addition to the assignment of the input jacks:

   - Input Name – You can choose to rename the input function for easier identification. Select Rename to do so, or Default to return to the system default.
   - Input Skip – When set to ON, that input is skipped when selecting the input using ALL (DVD and other inputs can be still be selected directly with the input function buttons.)
   - 12V Trigger 1/2 – After connecting a component to one of the 12 volt triggers (see Switching components on and off using the 12 volt trigger on page 45), select MAIN, ZONE 2, ZONE 3, HDZONE or OFF for the corresponding trigger setting to switch it on automatically along with the (main or sub) zone specified.

7. When you’re finished, press RETURN.

   You will return to the System Setup menu.

Input function default and possible settings

The terminals on the receiver generally correspond to the name of one of the input functions. If you have connected components to this receiver differently from (or in addition to) the defaults below, see The Input Setup menu on page 50 to tell the receiver how you’ve connected up. The dots (•) indicate possible assignments.

**Operation Mode Setup**

This receiver is equipped with a great number of functions and settings. The Operation Mode feature is provided for users who find it difficult to master all these functions and settings.

One of two settings can be selected for the **Operation Mode**: **Expert** and **Basic**.

- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the **MAIN/HDZONE** (page 107) and HDMI output (page 82) settings.

**Important**

- Many of the settings and functions cannot be selected when the **Operation Mode** is changed to **Basic**.

1. Press **MAIN RECEIVER** to switch the remote control to the receiver operation mode, and then press **HOME MENU**.

A Graphical User Interface (GUI) screen appears on your TV. Use **↑ / ↓ / ← / →** and **ENTER** to navigate through the screens and select menu items. Press **RETURN** to exit the current menu.

2. Select ‘Operation Mode Setup’ from the HOME MENU.

3. Select the Operation Mode setting you want.

   - **Expert** (default) – Users can set all the functions by themselves.
   - **Basic** – Only certain basic settings can be operated. The settings that can be operated are shown below. They can be set as necessary by referring to the operating instructions.

4. When you’re finished, press **RETURN**.

You will return to the HOME MENU.

### Changing the OSD display language (OSD Language)

The language used on the Graphical User Interface screen can be changed.

- The explanations in these operating instructions are for when English is selected for the GUI screen.

With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the **MAIN/HDZONE** (page 107) and HDMI output (page 82) settings.

1. Press **○ STANDBY/ON** to switch on the receiver and your TV.

Make sure that the TV’s video input is set to this receiver (for example, if you connected this receiver to the VIDEO jacks on your TV, make sure that the **VIDEO** input is now selected).

2. Press **MAIN RECEIVER** to switch the remote control to the receiver operation mode, and then press **HOME MENU**.

A Graphical User Interface (GUI) screen appears on your TV. Use **↑ / ↓ / ← / →** and **ENTER** to navigate through the screens and select menu items. Press **RETURN** to exit the current menu.

4. Select ‘OSD Language’ from the System Setup menu.

5. Select the desired language.

6. Select ‘OK’ to change the language.

The setting is completed and the System Setup menu reappears automatically.
Basic Setup

Changing the TV format setting
If the Graphical User Interface screen is not displayed correctly, it may be that the TV system is set incorrectly for your country or region.

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press STANDBY/ON. The display shows RESET NO.
3. Use TUNE ↑/↓ to select PAL/NTSC PAL, and then use PRESET ± to select PAL or NTSC.

Changing the frequency step
If you find that you can’t tune into stations successfully, the frequency step may not be suitable for your country/region. Here’s how to switch the setting:

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press STANDBY/ON. The display shows RESET NO.
3. Use TUNE ↑/↓ to select FREQ STEP 9k, and then use PRESET ± to select 9k or 10k.

About the Home Menu
This receiver’s Home Menu (HOME MENU) can be used to make various settings and to check and adjust items that have been set.

- With factory default settings, the Home Menu screen will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDFZONE (page 107) and HDMI output (page 82) settings.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode.
2. To display the Home Menu screen, press HOME MENU on the remote control.

A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

The top level in the Home Menu is as shown below. Refer to the respective explanations to set, check and adjust as necessary.

- **MCACC PRO** – Use this to make automatic settings and detailed manual settings for the surround sound. For details, see Making receiver settings from the MCACC PRO menu on page 93.
- **MCACC Data Check** – This displays the MCACC PRO measurement results. Use it to check the MCACC memory. For details, see Checking MCACC Data on page 97.
- **Data Management** – Use this to manage the data in the MCACC memory. For details, see Data Management on page 98.
- **System Setup** – Use this to make various settings related to this system. For details, see Making receiver settings from the System Setup menu on page 101.
- **Network Information** – The setting status of the network-related items can be checked. For detail, see Checking the Network Information on page 106.
- **Operation Mode Setup** – Use this to select this receiver’s operation mode. For details, see Operation Mode Setup on page 51.
Basic playback

Playing a source ............................................................................................................................. 54
Playing an iPod .............................................................................................................................. 55

Playing an MHL-compatible device .............................................................................................. 58
Listening to the radio .................................................................................................................... 58
Bluetooth ADAPTER for Wireless Enjoyment of Music .............................................................. 59
Playing a source

Here are the basic instructions for playing a source (such as a DVD disc) with your home theater system.

1. **Switch on your system components and receiver.**
   Start by switching on the playback component (for example a DVD player), your TV and subwoofer (if you have one), then the receiver (press \* STANDBY/ON\*).
   Make sure that the TV’s video input is set to this receiver.

2. **Select the input function you want to play.**
   You can use the input function buttons on the remote control or the front panel INPUT SELECTOR dial.
   - As necessary, select the type of audio input signal (page 64).

3. **Press AUTO (AUTO SURR/ALC/STREAM DIRECT) to select ‘AUTO SURROUND’ and start playback of the source.**
   For such sound sources as Dolby TrueHD and DTS-HD, the surround sound is played. With stereo sound, the sound is played from the left and right front speakers with the default listening mode.
   To play a stereo sound source in multichannel, press SURR or ADV to select your favorite listening mode.
   (Example: Press ADV several times to select EXT.STEREO.)
   - You may need to check the digital audio output settings on your DVD player or digital satellite receiver. It should be set to output Dolby Digital, DTS and 88.2 kHz / 96 kHz PCM (2 channel) audio, and if there is an MPEG audio option, set this to convert the MPEG audio to PCM.
   - See also Listening to your system on page 61 for information on different ways of listening to sources.
   - It is possible to check on the front panel display whether or not multi-channel playback is being performed properly. For details, see Auto Surround, ALC and Stream Direct with different input signal formats on page 123. When multi-channel speakers (more than the two front left and right channels) are connected, straight decoding is performed, so the input signal’s format name (for example, TrueHD, DTS-HD MSTR or DTS-HD HI RES) is displayed.
   - If the display does not correspond to the input signal and listening mode, check the connections and settings.

4. **Use the VOLUME +/- to adjust the volume level.**
   Turn down the volume of your TV so that all sound is coming from the speakers connected to this receiver.

---

Note
Depending on the input to be played, the playback operation can in some cases be performed using the on-screen display.
With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 107) and HDMI output (page 82) settings.

Turning off the sound
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
- Press MUTE.

Playing a source with HDMI connection
- **Use ALL to select the input function connected to the receiver’s HDMI input terminals.**
  You can also perform the same operation by using the INPUT SELECTOR dial on the front panel or by pressing HDMI on the remote control repeatedly.
  - Set the HDMI parameter in Setting the Audio options on page 77 to THROUGH if you want to hear HDMI audio output from your TV (no sound will be heard from this receiver).
  - If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, use an analog video connection.
Playing an iPod

This receiver has the iPod/iPhone terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver. Here we describe the procedure for playback on an iPod. For playback on a USB device, see Playing a USB device on page 56.

**Important**
- USB works with iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPhone 3G, iPod, iPod touch (1st through 5th generation) and iPod nano (3rd through 7th generation).
- However, some of the functions may be restricted for some models.
- This receiver has been developed and tested for the software version of iPod/iPhone indicated on the website of Pioneer.
  http://pioneer.jp/homeav/support/ios/a0/
- Installing software versions other than indicated on the website of Pioneer to your iPod/iPhone may result in incompatibility with this receiver.
- iPod and iPhone are licensed for reproduction of non-copyrighted materials or materials the user is legally permitted to reproduce.
- Features such as the equalizer cannot be controlled using this receiver, and we recommend switching the equalizer off before connecting.
- Pioneer cannot under any circumstances accept responsibility for any direct or indirect loss arising from any inconvenience or loss of recorded material resulting from the iPod failure.
- When listening to a track on the iPod in the main zone, it is possible to control the sub zone, but not to listen to a different track in the sub zone from the one playing in the main zone.

1. Press STANDBY/ON to switch on the receiver and your TV.
2. Press iPod USB on the remote control to switch the receiver to the iPod/USB.

When the display shows the names of folders and files, you’re ready to play music from the iPod.

Playing back audio files stored on an iPod

To navigate songs on your iPod, you can take advantage of the GUI screen of your TV connected to this receiver. You can also control all operations for music in the front panel display of this receiver.

- Note that characters that cannot be displayed on this receiver are displayed as #.
- This feature is not available for photos on your iPod.

**Finding what you want to play**

When your iPod is connected to this receiver, you can browse songs stored on your iPod by playlist, artist name, album name, song name, genre or composer, similar to using your iPod directly.

1. Use ‹ or › to select a category, then press ENTER to browse that category.
   - When ‹ or › is pressed at the list screen, the page switches.
   - To return to the previous level any time, press RETURN.
2. Use ‹ or › to browse the selected category (e.g., albums).
   - Use ‹ or › to move to previous/next levels.
3. Continue browsing until you arrive at what you want to play, then press ‹ to start playback.
   - On the playback screen, pressing RETURN displays a list screen. To return to the playback screen, press DISP.

**Note**
You can play all of the songs in a particular category by selecting the All item at the top of each category list. For example, you can play all the songs by a particular artist.

**Basic playback controls**

This receiver’s remote control buttons can be used for basic playback of files stored on an iPod.

**Switching the iPod controls**

You can switch over the iPod controls between the iPod and the receiver.

1. Press HOME MENU to switch the iPod controls.
   This enables operation and display on your iPod, and this receiver’s remote control and GUI screen become inactive.
2. Press HOME MENU again to switch back to the receiver controls.

**Note**
Change the receiver’s input to the iPod in one action by pressing the iPod iPhone DIRECT CONTROL button on the front panel to enable iPod operations on the iPod.
Basic playback

Playing a USB device

It is possible to play files using the USB interface on the front of this receiver.
- Compatible USB devices include external magnetic hard drives, portable flash memory drives (particularly key drives) and digital audio players (MP3 players) of format FAT16/32.
- Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.

1 Press ☻ STANDBY/ON to switch on the receiver and your TV.
See Connecting a USB device on page 43.
About one minute is required between turning the power on and completion of startup.
- Make sure the receiver is in standby when disconnecting the USB device.

2 Press iPod USB on the remote control to switch the receiver to the iPod/USB.
When the display shows the names of folders and files, you’re ready to play from the USB device.

Note
If an Over Current message lights in the display, the power requirements of the USB device are too high for this receiver. Try following the points below:
- Switch the receiver off, then on again.
- Reconnect the USB device with the receiver switched off.
- Use a dedicated AC adapter (supplied with the device) for USB power.
If this doesn’t remedy the problem, it is likely your USB device is incompatible.

Playing back audio files stored on a USB memory device

The maximum number of levels that you can select in Step 2 (below) is 9.
- Note that non-Roman characters in the playlist are displayed as #.

1 Use ↑/↓ to select a folder, then press ENTER to browse that folder.
- To return to the previous level any time, press RETURN.
2 Continue browsing until you arrive at what you want to play, then press ► to start playback.
  - Copyrighted audio files cannot be played back on this receiver.
  - DRM-protected audio files cannot be played back on this receiver.
  - On the playback screen, pressing RETURN displays a list screen. To return to the playback screen, press DISP.

Playing back photo files stored on a USB memory device

Photo files cannot be played in the sub zone.

1 Use ↑/↓ to select a folder, then press ENTER to browse that folder.
- For high resolution files, some time may be required for the photo to appear.
- To return to the previous level any time, press RETURN.
2 Continue browsing until you arrive at what you want to play, then press ENTER to start playback.
The selected content is displayed in full screen and a slideshow starts.

Basic playback controls

This receiver’s remote control buttons can be used for basic playback of files stored on USB memory devices.
- Press iPod USB to switch the remote control to the iPod/USB operation mode.

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENTER ►</td>
<td>Starts displaying a photo and playing a slideshow.</td>
</tr>
<tr>
<td>■</td>
<td>Stops the player and returns to the previous menu.</td>
</tr>
</tbody>
</table>

Tip
Slide shows of photo files can be played while listening to music files by returning to the folder/file list display while playing a music file on a USB device and then playing the photo files. At that time, select music files with a sampling frequency of 48 kHz or less.
About playable file formats

The USB function of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats.

- With MP3, WAV, AAC, FLAC, AIFF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.
- When AAC or MP3 format is used, sound is reproduced with the minimum gap. If you are conscious about gaps, use WAV or FLAC files.

Note:

a. “MPEG Layer-3 audio decoding technology licensed from Fraunhofer IIS and Thomson multimedia.”

b. 32 kHz, 176.4 kHz and 192 kHz support 2-channel audio sources only.

c. Gapless playback is not possible with a 5.0-channel or 5.1-channel audio source.

d. Files encoded using Windows Media Codec 9 may be playable but some parts of the specification are not supported; specifically, Pro, Lossless, Voice.

e. Uncompressed FLAC files are not supported. Pioneer does not guarantee playback.

Playing an MHL-compatible device

MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats. The MHL-compatible device’s video signals are output from the TV connected to the receiver, the audio signals are output from the speakers connected to the receiver or TV.

1. Press STANDBY/ON to switch on the receiver and your TV. See Connecting an MHL-compatible device on page 44.

2. Press MHL on the remote control to switch the receiver to the MHL.

3. Select and play the desired contents on the MHL-compatible device.

Notes

- MHL-compatible devices can be operated with the receiver’s remote control by pressing the remote control’s MHL button, but depending on the MHL-compatible device being used, some buttons may not be operable.
- To playback from an MHL-compatible device connected to the receiver on a TV that is also connected to the receiver, the power to the receiver must be turned on.

Listening to the radio

The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the frequency of the station you want, see Tuning directly to a station below. Once you are tuned to a station you can memorize the frequency for recall later—see Saving station presets on page 59 for more on how to do this.

1. Press TUNER to select the tuner.

2. Use BAND to change the band (FM or AM), if necessary.

3. Tune to a station.

There are three ways to do this:

- **Automatic tuning** – To search for stations in the currently selected band, press and hold TUNE +/- for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.

- **Manual tuning** – To change the frequency one step at a time, press TUNE +/-.

- **High speed tuning** – Press and hold TUNE +/- for high speed tuning. Release the button at the frequency you want.

Improving FM sound

If the TUNED or STEREO indicator doesn’t light when tuning to an FM station because the signal is weak, press MPX to switch the receiver into mono reception mode. This should improve the sound quality and allow you to enjoy the broadcast.

Using the noise cut mode

The two noise cut modes can be used when receiving AM broadcasts. Press MPX to select the noise cut mode (1 to 2).

Tuning directly to a station

1. Press TUNER to select the tuner.

2. Use BAND to change the band (FM or AM), if necessary.

4. Use the number buttons to enter the frequency of the radio station.

For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.

If you make a mistake halfway through, press D.ACCESS twice to cancel the frequency and start over.
Saving station presets

If you often listen to a particular radio station, it's convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This receiver can memorize up to 63 stations, stored in seven banks, or classes (A to G) of 9 stations each.

1. Tune to a station you want to memorize. See Listening to the radio on page 58 for more on this.
2. Press TOOLS (TUNER EDIT).
The display shows PRESET MEMORY, then a blinking memory class.
3. Press CLASS to select one of the seven classes, then press PRESET +/- to select the station preset you want.
   You can also use the number buttons to select a station preset.
4. Press ENTER.
   After pressing ENTER, the preset class and number stop blinking and the receiver stores the station.

Listening to station presets

1. Press TUNER to select the tuner.
2. Press CLASS to select the class in which the station is stored.
   Press repeatedly to cycle through classes A to G.
3. Press PRESET +/- to select the station preset you want.
   • You can also use the number buttons on the remote control to recall the station preset.

Naming station presets

For easier identification, you can name your station presets.

1. Choose the station preset you want to name. See Listening to station presets on page 59 for how to do this.
2. Press TOOLS (TUNER EDIT).
The display shows PRESET NAME, then a blinking cursor at the first character position.
3. Input the name you want.
   Use i/j (or TUNE i/j of front panel) to select a character, or (PRESET k/l of front panel) to set the position, and ENTER to confirm your selection.

Notes

• To erase a station name, simply repeat steps 1 to 3 and input eight spaces instead of a name.
• Once you have named a station preset, you can press DISP when listening to a station to switch the display between name and frequency.

Bluetooth ADAPTER for Wireless Enjoyment of Music

Wireless music play

When the Bluetooth ADAPTER (AS-BT100 or AS-BT200) is connected to this unit, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly. Also, by using a commercially available transmitter supporting Bluetooth wireless technology, you can listen to music on a device not equipped with Bluetooth wireless technology. The AS-BT100 and AS-BT200 models support SCMS-T contents protection, so music can also be enjoyed on devices equipped with SCMS-T type Bluetooth wireless technology.

Remote control operation

The remote control supplied with this unit allows you to play and stop media, and perform other operations.

• It must be necessary that the Bluetooth wireless technology enabled device supports AVRCP profiles.
• Remote control operations cannot be guaranteed for all Bluetooth wireless technology enabled devices.
Pairing the Bluetooth ADAPTER and Bluetooth wireless technology device

“Pairing” must be done before you start playback of Bluetooth wireless technology content using the Bluetooth ADAPTER. Make sure to perform pairing the first time you operate the system or any time pairing data is cleared. The pairing step is necessary to register the Bluetooth wireless technology device to enable Bluetooth communications. For more details, see also the operating instructions of your Bluetooth wireless technology device.

- Pairing is required when you first use the Bluetooth wireless technology device and Bluetooth ADAPTER.
- To enable Bluetooth communication, pairing should be done with both your system and Bluetooth wireless technology device.
- If the Bluetooth wireless technology device’s security code is “0000”, there is no need to make the security code setting on the receiver. Press BT ADPT to set the ADAPTER PORT input, then conduct the pairing operation on the Bluetooth wireless technology device. If pairing is successful, there is no need to performing the pairing operation below.
- When using the AS-BT200 only: This unit complies with Bluetooth Specifications Ver. 2.1. When this unit and another device equipped with Bluetooth wireless technology both comply with Bluetooth Specification Ver. 2.1, pairing of the two may be possible without the need for inputting a password. In this case, a passcode may be displayed on this receiver and on the device equipped with Bluetooth wireless technology. If this happens, check that the same passcode is displayed on this receiver and the device equipped with Bluetooth wireless technology, then press ENTER. After this, also perform the connection operation on the Bluetooth device to be connected. If the passcode does not match the code displayed on the Bluetooth device to be connected, press RETURN to cancel pairing, then try starting over. Press BT ADPT to set the ADAPTER PORT input, then conduct the pairing operation on the Bluetooth wireless technology device. If pairing is successful, there is no need to performing the pairing operation below.
- Pair one unit at a time.
- When connecting this receiver by Bluetooth connection with a device equipped with the Bluetooth function to listen to music, do not connect any devices other than this receiver by Bluetooth connection to the Bluetooth-equipped device. If a Bluetooth connection is already established with a device other than this receiver, disconnect the other device before connecting this receiver.

1 Press BT ADPT on the remote control to switch the receiver to ADAPTER PORT input.
2 Press TOP MENU to select Bluetooth Setup.
3 Use †/ ‡ to select ‘PIN’ then press ENTER.
4 Use †/ ‡ to select one of PIN codes 0000, 1234 or 8888, then press ENTER. You can use any of 0000, 1234 or 8888 PIN codes. Bluetooth wireless technology device using any other PIN code cannot be used with this receiver.
5 Press the RETURN button twice to exit Bluetooth Setup.
6 Switch on the Bluetooth wireless technology device that you want to make pair, place it near the receiver and set it to the pairing mode.
7 From the Bluetooth wireless technology device list, select Bluetooth ADAPTER and enter the PIN code selected in step 4.
8 Check to see that the Bluetooth ADAPTER is detected by the Bluetooth wireless technology device. If the receiver and Bluetooth wireless technology device are not paired, start over from step 6.

Notes
- The PIN code may in some cases be referred to as PASSKEY.
- For information on enabling pairing on the Bluetooth wireless technology device, connection procedures, etc., see the Bluetooth wireless technology device’s operating instructions.

Listening to music contents of a Bluetooth wireless technology device with your system

1 Press BT ADPT on the remote control to switch the receiver to ADAPTER PORT input.
2 From the Bluetooth wireless technology device, perform the operation to connect to the Bluetooth ADAPTER.
   - When the Bluetooth ADAPTER is not plugged into the ADAPTER PORT. No Adapter will be displayed if ADAPTER PORT input is selected.
3 Start playback of music contents stored on the Bluetooth wireless technology device.
   This receiver’s remote control buttons can be used for basic playback of files stored on Bluetooth wireless technology devices.
   - Bluetooth wireless technology device should be compatible with AVRCP profile.
   - Depending on the Bluetooth wireless technology device you use, operation may differ from what is shown in the remote control buttons.
4 While listening to a source, set the remote control to the receiver operation mode, then press ADV repeatedly to select SOUND RETRIEVER AIR.

Notes
- The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by PIONEER CORPORATION is under license. Other trademarks and trade names are those of their respective owners.
- With this receiver, when an iPod is connected or disconnected while the music of a Bluetooth wireless technology device is playing, the connection with the Bluetooth wireless technology device may be canceled.
- The SOUND RETRIEVER AIR listening mode can only be selected when the ADAPTER PORT input.
Listening to your system

Enjoying various types of playback using the listening modes ......................................................62
Selecting MCACC presets ..............................................................................................................64
Choosing the input signal .............................................................................................................64
Better sound using Phase Control ...............................................................................................64
Better sound using Phase Control and Full Band Phase Control ...............................................65
Enjoying various types of playback using the listening modes

Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you’re listening to.

To play with surround sound, check “Standard surround sound” or “Using the Advanced surround effects” below and select the desired mode.

To play with the optimum mode for the input signal, see “Auto playback” or “Using Stream Direct”. (The sound is played in stereo when 2-channel signals are input, in surround when multi-channel signals are input.)

**Important**

- The listening modes and many features described in this section may not be available depending on the current source, settings and status of the receiver.

### Auto playback

There are many ways to listen back to sources using this receiver, but the simplest, most direct listening option is the Auto Surround feature. The receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.

- **While listening to a source, press AUTO (AUTO SURR/ALC/STREAM DIRECT) for auto playback of a source.**
  - **AUTO SURROUND** shows briefly in the display before showing the decoding or playback format. Check the digital format indicators in the front panel display to see how the source is being processed.
  - If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.
  - When listening to the ADAPTER PORT input, the SOUND RETRIEVER AIR feature is selected automatically.
  - ALC – In the Auto level control (ALC) mode, this receiver equalizes playback sound levels.
  - Also, the low and high frequency sounds, dialogues, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.
  - OPTIMUM SURR – In the Optimum Surround mode, this receiver automatically optimizes sound balance in each scene based on actually set volume. The sound balancer controls three major theater sound elements dialogue, bass and surround with original algorithm.

**Notes**

- When ALC is selected, the effect level can be adjusted using the **EFFECT** parameter in **Setting the Audio options** on page 77.
- When the Dolby Atmos content is played. **ALC** and **OPTIMUM SURR** cannot be selected.

### Standard surround sound

The following modes provide basic surround sound for stereo and multichannel sources.

- **While listening to a source, press SURR (STANDARD SURROUND).**
  - If necessary, press repeatedly to select a listening mode.
  - If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.
  - **WIDE SURROUND MOVIE** and **WIDE SURROUND MUSIC** cannot be selected when no front wide speaker is connected.
  - **WIDE SURROUND MOVIE** – Up to 7.1 channel sound (front wide), especially suited to movie sources
  - **WIDE SURROUND MUSIC** – Up to 7.1 channel sound (front wide), especially suited to music sources
  - **Neo:X CINEMA** – Up to 9.1 channel sound (surround back and front height or surround back and front wide), especially suited to movie sources
  - **Neo:X MUSIC** – Up to 9.1 channel sound (surround back and front height or surround back and front wide), especially suited to music sources
  - **Neo:X GAME** – Up to 9.1 channel sound (surround back and front height or surround back and front wide), especially suited to video games
  - **STEREO** – The audio is heard with your sound settings and you can still use the audio options.
  - **DTS-ES Matrix or DTS-ES Discrete** – Allows you to hear 6.1 channel playback with DTS-ES encoded sources
  - **Dolby Surround** – Dolby Surround replaces current channel-based upmixing technologies, such as Dolby Pro Logic II, Pro Logic IIX, and Pro Logic IIZ, and uses an approach to upmixing that provides a three-dimensional listening experience.
  - **DTS-ES Discrete** – Allows you to hear 6.1 channel playback with DTS-ES encoded sources

**Notes**

- When listening to 2-channel sources in Neo:X Cinema, Neo:X Music or Neo:X Game mode, you can also adjust the **C.GAIN** effect (see **Setting the Audio options** on page 77).
- When listening through headphones, you can select **STEREO** mode only.
- When the Dolby Atmos content is played, only **STEREO** or straight decode can be selected.
- When **Dolby Surround** is selected, **C.SPREAD** can be adjusted (page 77).
- When **Dolby Surround** is selected, audio is not output from the front wide speaker and the surround back speaker when it is the only one connected (set).
Using the Advanced surround effects

The Advanced surround effects can be used for a variety of additional surround sound effects. Most Advanced Surround modes are designed to be used with film soundtracks, but some modes are also suited for music sources. Try different settings with various soundtracks to see which you like.

- Press ADV (ADVANCED SURROUND) repeatedly to select a listening mode.
  - ACTION – Designed for action movies with dynamic soundtracks
  - DRAMA – Designed for movies with lots of dialog
  - ADVANCED GAME – Suitable for video games
  - SPORTS – Suitable for sports programs
  - CLASSICAL – Gives a large concert hall-type sound
  - ROCK/POP – Creates a live concert sound for rock and/or pop music
  - EXT.STEREO – Gives multichannel sound to a stereo source, using all of your speakers
  - F.S.SURROUND – Use to provide a rich surround sound effect directed to the center of where the front left and right speakers sound projection area converges.

- SOUND RETRIEVER AIR – Suitable for listening to the sound from a Bluetooth wireless technology device. The SOUND RETRIEVER AIR listening mode can only be selected when the ADAPTER PORT input.
- PHONES SURR – When listening through headphones, you can still get the effect of overall surround.
- ECO MODE 1 – Select this to play for example music that has a high audio level with a lower power consumption than usual.
- ECO MODE 2 – Select this to play movies, etc., with a high ratio of low volume scenes and high volume scenes (a large dynamic ratio) with a lower power consumption than usual. This mode provides greater power savings than ECO MODE 1.

Notes
- The Front Stage Surround Advance (F.S.SURROUND) function allows you to create natural surround sound effects using just the front speakers and the subwoofer.
- When ECO MODE 1 or ECO MODE 2 is selected, the front panel’s display lights with the dimmest brightness.
- Since ECO MODE 1 and ECO MODE 2 reduce the power consumption, the speakers are switched in function of the number of input channels. Because of this, a speaker switching sound (clicking sound) may be produced when the number of input channels is switched. If this bothers you, switch to a different listening mode.
- When using headphones, SOUND RETRIEVER AIR (only with the ADAPTER PORT input), PHONES SURR, ECO MODE 1 and ECO MODE 2 can be selected.
- When the Dolby Atmos content is played, the Advanced Surround mode cannot be selected.

Using Stream Direct

Use the Stream Direct modes when you want to hear the truest possible reproduction of a source. All unnecessary signal processing is bypassed, and you’re left with the pure analog or digital sound source. Processing differs depending on the input signal and whether or not surround back speakers are connected. For details, see Auto Surround, ALC and Stream Direct with different input signal formats on page 123.

- While listening to a source, press AUTO (AUTO SURR/ALC/STREAM DIRECT) to select the mode you want.
  - Check the digital format indicators in the front panel display to see how the source is being processed.
  - AUTO SURROUND – See Auto playback on page 62.
  - ALC – Listening in Auto level control mode (page 60).
  - DIRECT – Plays back sound from the source with the least modification next to PURE DIRECT. With DIRECT, the only modifications added to PURE DIRECT playback are calibration of the sound field by the MCACC system and the Phase Control effect.
  - PURE DIRECT – Plays back unmodified sound from source with only minimal digital treatment.
  - OPTIMUM SURR – Listening in Optimum Surround mode (page 60).

Notes
- When listening through headphones, you can select ALC, OPTIMUM SURR or PURE DIRECT mode only.
- When the Dolby Atmos content is played, ALC and OPTIMUM SURR cannot be selected.

About Dolby Atmos

This AV receiver supports the latest Dolby Atmos surround sound system. Dolby Atmos is a new technology in which, through real time calculation of audio data and meta data (position and time information) included in the audio signal, a surround sound space is achieved irrespective of the speaker layout and number of speakers. In order to enjoy Dolby Atmos, Dolby Atmos-compatible content is required. Dolby Atmos content on Dolby Atmos-compatible Blu-ray Discs can be played back on most conventional Blu-ray players by sending the Dolby Atmos bitstream to the AVR.

For details on Dolby Atmos, see page 126.

Note
When playing Dolby Atmos content, the program format indicator does not light (page 10).

63
Selecting MCACC presets

- Default setting: MEMORY 1

If you have calibrated your system for different listening positions, you can switch between settings to suit the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.

2. Use †/ ‡ to select ‘MCACC’.

3. Use ċ ī to select the setting.

Press repeatedly to select one of the six MCACC presets. See Data Management on page 98 to check and manage your current settings.
- These settings have no effect when headphones are connected.
- You can also press ċ ī to select the MCACC preset.

Choosing the input signal

On this receiver, it is possible to switch the input signals for the different inputs as described below.
- This receiver can only play back Dolby Digital, PCM (32 kHz to 192 kHz) and DTS (including DTS 96/24) digital signal formats. The compatible signals via the HDMI terminals are: Dolby Digital, DTS, PCM (32 kHz to 192 kHz), Dolby TrueHD, Dolby Digital Plus, DTS-EXPRESS, DTS-HD Master Audio and SACD.
- You may get digital noise when an LD, CD, DVD or BD player compatible with DTS is playing an analog signal.
- For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. Phase Control Plus function corrects for phase shifting on such discs. For instructions on setting the Phase Control Plus, see Setting the Audio options on page 77.
- If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0º). However, the effect you can actually feel when PHASE CONTROL is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.
- The PHASE CONTROL indicator on the front panel lights.

Better sound using Phase Control

This receiver’s Phase Control feature uses phase correction measures to make sure your sound source arrives at the listening position in phase, preventing unwanted distortion and/or coloring of the sound.

Phase Control technology provides coherent sound reproduction through the use of phase matching for an optimal sound image. The default setting is on and we recommend leaving Phase Control switched on for all sound sources.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.

2. Use †/ ‡ to select ‘PHASE’.

3. Use ċ ī to switch on phase correction.
   The PHASE CONTROL indicator on the front panel lights.

Notes

- Phase matching is a very important factor in achieving proper sound reproduction. If two waveforms are ‘in phase’, they crest and trough together, resulting in increased amplitude, clarity and presence of the sound signal. If a crest of a wave meets a trough, then the sound will be ‘out of phase’ and an unreliable sound image will be produced.
- If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0º). However, the effect you can actually feel when PHASE CONTROL is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.
- The PHASE CONTROL mode cannot be set to ON in the following cases:
   - When headphones are plugged in.
   - When the PURE DIRECT mode is switched on.
- When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 77.
Better sound using Phase Control and Full Band Phase Control

This receiver is equipped with the two types of functions that correct phase distortion and group delay: Phase Control and Full Band Phase Control. Activating Full Band Phase Control is strongly recommended because it also involves the effects of Phase Control.

The Full Band Phase Control feature calibrates the frequency-phase characteristics of the speakers connected. Standard speakers designed exclusively for audio use generally reproduce sound with the divided frequency bands output from a speaker system consisting of multiple speakers (in case of typical 3-way speakers, for instance, the tweeter, the squawker (midrange), and the woofer output sound in the high-, middle-, and low-frequency ranges, respectively). Though these speakers are designed to flatten the frequency-amplitude characteristics across wide ranges, there are cases where the group delay characteristics are not effectively flattened.

This phase distortion of the speakers subsequently causes group delay (the delay of low-frequency sound against high-frequency sound) during audio signal playback.

This receiver analyzes the frequency-phase characteristics of the speakers by measuring test signals output from the speakers with the supplied microphone, therefore flattening the analyzed frequency-phase characteristics during audio signal playback - the same correction is made for a pair of left and right speakers. This correction minimizes group delay between the ranges of a speaker and improves the frequency-phase characteristics across all ranges.

Furthermore, the enhanced frequency-phase characteristics between channels ensure better surround sound integration for multichannel setting.

- Upon shipment from the factory, the Phase Control function is in on status. If you perform Full Auto MCACC (page 46) or Full Band Phase Ctrl of Auto MCACC (page 93), the Full Band Phase Control function is automatically turned on after measurement. By turning Full Band Phase Control on, the Phase Control function is turned on as well. Therefore, we recommend that usually the function be used with Full Band Phase Control on.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.
2. Use ↑/↓ to select ‘PHASE’.
3. Use ←/→ to select ‘FULLBND’.

Both the Phase Control and Full Band Phase Control functions are switched on. The FULL BAND and ✗ indicators, on the front panel lights.

Notes
- The original characteristics of group delay of the speakers calibrated and the targeted characteristics after correction can be displayed graphically in the GUI screen (see Checking MCACC Data on page 97). Also, by transferring the measurement data to the computer using the CD-ROM, the original characteristics of group delay of the speakers calibrated and the corrected characteristics of group delay can be displayed in 3-dimension on your PC. For details, refer to the operating instructions for the MCACC PRO PC Display Application Software included on the CD-ROM.
- Depending on the input signal and listening mode, it may not be possible to set the Full Band Phase Ctrl mode to ON.
- The Full Band Phase Ctrl mode cannot be set to ON in the following cases:
  — When headphones are plugged in.
  — When the PURE DIRECT mode is switched on.
  — When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 77.
- The Full Band Phase Control function does not work for Dolby Enabled Speaker since they are full-range speakers.
Playback with NETWORK features

Introduction ...................................................................................................................................67
Playback with Network functions ...........................................................................................68
About network playback .........................................................................................................70
About playable file formats .....................................................................................................71
Introduction
This receiver is equipped with the LAN terminal and you can enjoy the following features by connecting your components to these terminals.

Listening to Internet radio stations
You can select and listen to your favorite Internet radio station from the list of Internet radio stations created, edited, and managed by the vTuner database service exclusively for use with the Pioneer products.

→ See Playback with Network functions on page 68 and Listening to Internet radio stations on page 68.

Playback the music files stored in PCs
You can playback a lot of music files stored in your PCs using this unit.

• Besides a PC, you can also play back audio files stored on your other components with the built-in media server function based on DLNA 1.0 or DLNA 1.5 framework and protocols (i.e. network-capable hard disks and audio systems).

→ See Playback with Network functions on page 68 and Playing back audio files stored on components on the network on page 70.

Listening to Spotify audio streaming playback
→ See About the Spotify audio stream playback function on page 69.

Notes
• To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand.
• Photo or video files cannot be played back.
• With Windows Media Player 11 or Windows Media Player 12, DRM-protected audio files cannot be played back on this receiver.

About playable DLNA network devices
This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:

• PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 12 installed
• DLNA-compatible digital media servers (on PCs or other components)

Files stored in a PC or DMS (Digital Media Server) as described above can be played via command from an external Digital Media Controller (DMC). Devices controlled by this DMC to play files are called DMRs (Digital Media Renderers). This receiver supports this DMR function. When in the DMR mode, such operations as playing and stopping files can be performed from the external controller. Volume adjustment and the muting control are also possible. The DMR mode is canceled if the remote control unit is operated while in the DMR mode (aside from certain buttons, including the VOLUME +/-, MUTE and DISP).
• Depending on the external controller being used, playback may be interrupted when the volume is adjusted from the controller. In this case, adjust the volume from the receiver or remote control.

Using AirPlay on iPod touch, iPhone, iPad, and iTunes
AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

To use AirPlay, select your receiver on your iPod touch, iPhone, iPad or in iTunes. ♦1
The receiver’s input will switch automatically to AirPlay when AirPlay is in use. ♦2
The following operations can be performed when in AirPlay mode:

• Adjustment of the receiver’s volume from iPod touch, iPhone, iPad or iTunes.
• Pause/resume, next/previous track, and shuffle/repeat from the remote control of the receiver. ♦3
• Display of the currently playing track information on the receiver’s display, including artist, song and album name.

♦1: For more information, see the Apple website (http://www.apple.com).
♦2: The receiver’s power automatically turns on when Network Standby at Network Setup is set to ON.
♦3: If operation is not possible, press NET, then operate again.

Notes
• A network environment is required to use AirPlay.
• The receiver’s name that shows up in the AirPlay UI on iPod touch, iPhone, iPad and iTunes can be changed by Friendly Name from Network Setup.
• AirPlay provided on this receiver has been developed and tested based on the software versions for the iPod, iPhone, iPad and the software versions for iTunes that are indicated on the Pioneer website. AirPlay may not be compatible with iPod, iPhone, iPad or iTunes software versions other than those indicated on the Pioneer website.
http://pioneer.jp/homeav/support/ios/ao/

About the DHCP server function
To play back audio files stored on components on the network or listen to Internet radio stations, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See Network Setup menu on page 103 for more on this.

Authorizing this receiver
This receiver must be authorized to enable playback. This happens automatically when the receiver makes a connection over the network to the PC. If not, please authorize this receiver manually on the PC. The authorization (or permission) method for access varies depending on the type of server currently being connected. For more information on authorizing this receiver, refer to the instruction manual of your server.
About HTC Connect
This receiver features “HTC Connect”, a simple way to enjoy music content from your HTC Connect certified smartphone.
1 HTC Connect music streaming provided on this product has been developed based on interoperability testing as defined by the HTC Connect Certification program with the HTC Connect-compatible smartphones.
2 Music Navigation via the music progress bar is not currently supported with HTC Connect.
3 Third party music applications (those other than HTC’s pre-installed “Music” app) have not been tested for compatibility and may not work. HTC Connect has been tested with MP3, AAC, WMA and WAV encoding formats. Other formats may not be compatible.
4 High network congestion may interfere with the operation of HTC Connect.

HTC Connect Certified Smartphones
The HTC Connect-compatible smartphones, Please check Pioneer website for up to date information about compatible devices and audio format support.
http://www.pioneer.com.sg (for Southeast Asia)
http://www.pioneer.com.au (for Australia)
http://www.pioneerhongkong.com.hk (for Hong Kong)

Notes
• Specifications and design subject to modification without notice.
• HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.

Playback with Network functions

Important
• About one minute is required between turning the power on and completion of startup.
• When you play back audio files, “Connecting...” is displayed before playback starts. The display may continue for several seconds depending on the type of file.
• In case a domain is configured in a Windows network environment, you cannot access a PC on the network while you are logged onto the domain. Instead of logging onto the domain, log onto the local machine.
• There are cases where the time elapsed may not be correctly displayed.

1 Press NET repeatedly to select the category you want to play back.
It may take several seconds for this receiver to access the network.
Select a category from the following list:

INTERNET RADIO – Internet radio
When INTERNET RADIO is selected, the radio station that was playing last time is played.
MEDIA SERVER – Server components on the network
FAVORITES – Favorite songs currently being registered
Depending on the selected category, the names of folders, files, and Internet radio stations are displayed.

2 Use ↑ / ↓ to select the folder, music files or Internet radio station to play back, and then press ENTER.
Press ↑ / ↓ to scroll up and down the list and select the desired item. When you press ENTER, playback starts with the playback screen being displayed for the selected item. To return to the list screen, press RETURN.
When the list screen is displayed from the playback screen, the playback screen reappears automatically if no operation is performed for three minutes while the list screen is displayed. Only audio files with the ♯ mark can be played. In case of the folders with the ♯ mark, use ↑ / ↓ and ENTER to select the desired folder and audio files.
• When ► is pressed at the list screen, the page switches.
• To return to the playback screen from the list display, press DISP.

3 Repeat step 2 to play back the desired song.
For detailed operating instructions, refer to the section shown below.
• Internet radio stations – See Listening to Internet radio stations on page 68.
• Media server – See Playing back audio files stored on components on the network on page 70.
• Favorites – See Playing back your favorite songs on page 70.

Basic playback controls
You can perform the following operations with the remote control of this receiver. Note that some buttons are not available for operation depending on the category currently being played back.
• Press NET to switch the remote control to the network operation mode.

Notes
• While a DSD file is being played, ◄◄ and ►► are disabled.
• When input is MEDIA SERVER or FAVORITES, the following action is taken, depending on the server or file.
— | may not work.
— ◄◄ and ►► may not work or may take the same action as ◄◄ and ►►.
• When input is MEDIA SERVER, by pressing TOOLS on the list display screen, you can switch the displayed titles in alphabetical order or track order.

Listening to Internet radio stations
Internet radio is an audio broadcasting service transmitted via the Internet. There are a large number of Internet radio stations broadcasting a variety of services from every corner of the world. Some are hosted, managed, and broadcast by private individuals while others are by the corresponding traditional terrestrial radio stations or radio networks. Whereas terrestrial, or OTA (over-the-air), radio stations are geographically restricted on the range of radio waves broadcast from a transmitter through the air, Internet radio stations are accessible from anywhere in the world, as long as there is a connection to the Internet, as services are not transmitted through the air but are delivered over the World Wide Web. On this receiver you can select Internet radio stations by genre as well as by region.
Depending on the Internet line conditions, the sound may not be smooth when playing Internet radio.
About list of Internet radio

The list of Internet radio stations on this receiver is created, edited, and managed by the vTuner database service exclusively for use with this receiver. For details about vTuner, see vTuner on page 128.

Saving and retrieving Internet radio stations

You can easily save and retrieve saved Internet radio stations. See Playing back your favorite songs on page 70 for more on this.

• To listen to Internet radio stations, you must have high-speed broadband Internet access. With a 56 K or ISDN modem, you may not enjoy the full benefits of Internet radio.
• The port number varies depending on the Internet radio station. Check the firewall settings.
• A list of Internet radio stations provided by the vTuner database service is subject to change or deletion without notice due to various reasons.
• Broadcasts may be stopped or interrupted depending on the Internet radio station. In this case, you cannot listen to a radio station selected from the list of Internet radio stations.

Registering broadcast stations not on the vTuner list from the special Pioneer site

With the receiver, broadcast stations not included on the list of station distributed by vTuner can be registered and played. Check the access code required for registration on the receiver, use this access code to access the special Pioneer Internet radio site and register the desired broadcast stations in your favorites. The address of the special Pioneer Internet radio site is:
http://www.radio-pioneer.com

1 Display the Internet Radio list screen.
To display the Internet Radio list screen, perform step 1 at Playback with Network functions on page 68.

2 Use † / ‡ to select ‘Help’, then press ENTER.

3 Use † / ‡ to select ‘Get access code’, then press ENTER.
The access code required for registration on the special Pioneer Internet radio site is displayed. Make a memo of this address. The following can be checked on the Help screen:
• Get access code – The access code required for registration on the special Pioneer Internet radio site is displayed.
• Show Your WebID/PW – After registering on the special Pioneer Internet radio site, the registered ID and password are displayed.
• Reset Your WebID/PW – Resets all the information registered on the special Pioneer Internet radio site. When reset, all the registered broadcast stations are also cleared. If you want to listen to the same stations, re-register after resetting.

4 Access the special Pioneer Internet radio site from your computer and perform the registration process.
http://www.radio-pioneer.com
Access the above site and use the access code in step 3 to perform user registration, following the instructions on the screen.

5 Register the desired broadcast stations as your favorites, following the instructions on the computer’s screen.
Both broadcast stations not on the vTuner list and stations on the vTuner list can be registered. In this case they are registered on the receiver as favorite broadcast stations and can be played.

About the Spotify audio stream playback function

Spotify is a music streaming distribution service managed and operated by Spotify Ltd. and distributing music over the Internet. Spotify audio streams can be enjoyed using this unit and your smartphone or other mobile digital device.

Preparations (1) Installing the Spotify application on mobile digital devices and registering a Spotify Premium account

Important

• The Spotify application must be installed on mobile digital devices and you must have registered a Spotify Premium account (for a charge) in order to use the Spotify audio stream playback function on this unit. For registration procedures and other Spotify services, see the Spotify website.
http://www.spotify.com/
http://www.spotify.com/connect/
• For information on the countries and regions where Spotify services can be used, see the website below.
http://www.spotify.com/
Spotify functions may be changed without notice.

An Internet connection is required on the mobile digital device in order to use the Spotify application. Using the mobile telephone line for the Internet connection tends to lead to high packet communication charges, so we recommend subscribing to a fixed packet rate plan. For details, contact your mobile telephone operator.

Preparations (2) Connecting this unit to the network

• Connect this unit to the network and also to the Internet (page 42).
• Connect the mobile digital device by Wi-Fi to the wireless LAN router of the same network as the one to which this unit is connected. For instructions on connecting, see the operating instructions of the mobile digital device and the wireless LAN router.

In order to use the Spotify audio stream playback function from the Spotify application

To use the Spotify audio stream playback function, select this unit on the Spotify application. When Spotify audio streaming starts, this unit’s input automatically switches to Spotify.

Notes

• A separate contract with/payment to an Internet service provider is required to use the Spotify audio stream playback function.
• This unit’s name is displayed as the playback device on the Spotify application. Also, this unit’s name can be changed at Friendly Name in the network settings.
• When this unit is selected with the Spotify application, the account information is registered on this unit as well. When disposing of this unit, reset this unit’s settings in order to delete the account information registered on this unit. For instructions on resetting, see this unit’s operating instructions.
Playback with NETWORK features

Playing back audio files stored on components on the network
This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:

- PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
- PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)

Playing back your favorite songs
Up to 64 favorite tracks on the media server and/or Internet radio stations can be registered in the Favorites folder. Note that only the audio files stored on components on the network can be registered.

Registering and deleting audio files and Internet radio stations in and from the Favorites folder

1. Press NET repeatedly to select the INTERNET RADIO or MEDIA SERVER.
2. With the track or Internet radio station you want to register selected, press +Favorite. The selected song or Internet radio station is then registered in the Favorite.

Note
To delete tracks or Internet radio stations that have been registered, set the input to FAVORITES, select the track or station to be deleted, then press the CLR button.

About network playback
The network playback function of this unit uses the following technologies:

Windows Media Player
See Windows Media Player 11/Windows Media Player 12 on page 128 for more on this.

DLNA

Content playable over a network
- Even when encoded in a compatible format, some files may not play correctly.
- Movie or Photo files cannot be played back.
- There are cases where you cannot listen to an Internet radio station even if the station can be selected from a list of radio stations.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit.

Disclaimer for Third Party Content
Access to content provided by third parties requires a high speed internet connection and may also require account registration and a paid subscription.

Third party content services may be changed, suspended, interrupted, or discontinued at any time without notice, and Pioneer disclaims any liability in connection with such occurrences.

Pioneer does not represent or warrant that content services will continue to be provided or available for a particular period of time, and any such warranty, express or implied, is disclaimed.

About playback behavior over a network
- Playback may stall when the PC is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 100BASE-TX connection between player and PC is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected PC and the setting of such software, network connection may be blocked.

Pioneer is not responsible for any malfunction of the player and/or the NETWORK features due to communication error/malfunctions associated with your network connection and/or your PC, or other connected equipment. Please contact your PC manufacturer or Internet service provider.

This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc. Microsoft, Windows, Windows Media and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

DLNA CERTIFIED™ Audio Player
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.5.

When a PC running DLNA server software or other DLNA compatible device is connected to this player, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

DLNA™, the DLNA Logo and DLNA CERTIFIED™ are trademarks, service marks, or certification marks of the Digital Living Network Alliance.
About playable file formats

The NETWORK feature of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats. Also, the compatibility of file formats varies depending on the type of server. Check with your server to ensure the compatibility of file formats supported by your server.

- Internet radio playback may be affected by the Internet communications environment, and in this case playback may not be possible even with the file formats listed here.
- With MP3, WAV, AAC, FLAC, AIFF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.
- — Gapless playback is not possible when the format is being converted (transcoded) by the server.
- — Gapless playback is not possible in the DMR mode.
- — When AAC or MP3 format is used, sound is reproduced with the minimum gap. If you are conscious about gaps, use WAV or FLAC files.

Music files

<table>

- Extension: .aiff
- Stream: AIFF
- Sampling frequency: 32 kHz, 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bitrate: 16 bit, 24 bit
- Channel: 2 ch |

### DSD <f>
- Extension: .dss, .dsf, .dsfi
- Stream: DSD, DSDIFF
- Sampling frequency: 2.8224 MHz, 5.6448 MHz
- Quantization bitrate: 1 bit
- Channel: 2 ch

---

- “MPEG Layer-3 audio decoding technology licensed from Fraunhofer IIS and Thomson multimedia.”
- b. 32 kHz, 176.4 kHz and 192 kHz support 2-channel audio sources only.
- c. When playing the 5.0 channel or 5.1 channel file in the sub zone, only the front left and right sound is played. Multichannel playback is only available with the main zone.
- d. Gapless playback is not possible with a 5.0-channel or 5.1-channel audio source.
- e. Files encoded using Windows Media Codec 9 may be playable but some parts of the specification are not supported; specifically, Pro, Lossless, Voice.
- f. Uncompressed FLAC files are not supported. Pioneer does not guarantee playback.
- g. DSD files cannot be played in the sub zone.
Control with HDMI function

About the Control with HDMI function ................................................................. 73
Making Control with HDMI connections ............................................................... 73
HDMI Setup ....................................................................................................... 73
Before using synchronization ............................................................................ 74
About synchronized operations ......................................................................... 74
Setting the PQLS function ............................................................................... 74
About Sound Retriever Link and Stream Smoother Link ................................. 74
Cautions on the Control with HDMI function .................................................. 75
About the Control with HDMI function

Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

**Important**

- With Pioneer devices, the Control with HDMI functions are referred to as ‘KURO LINK’.
- You cannot use this function with components that do not support Control with HDMI.
- We only guarantee this receiver will work with Pioneer Control with HDMI-compatible components. However, we do not guarantee that all synchronized operations will work with components that support the Control with HDMI function.
- Use a High Speed HDMI™ cable when you want to use the Control with HDMI function. The Control with HDMI function may not work properly if a different type of HDMI cable is used.
- For details about concrete operations, settings, etc., refer to also the operating instructions for each component.

Making Control with HDMI connections

You can use synchronized operation for a connected TV and other components.

- Be sure to connect the TV’s audio cable to the audio input of this unit. When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV is input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 73).
- For details, see Connecting your TV and playback components on page 33.
- When connecting this system or changing connections, be sure to switch the power off and disconnect the power cord from the wall. After completing all connections, connect the power cords to the wall socket.
- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during this process. The HDMI indicator in the front panel display blinks during this process, and you can turn on this receiver once it has stopped blinking. When you set the Control with HDMI to OFF, you can skip this process. For details about the Control with HDMI feature, see Control with HDMI function on page 72.
- To get the most out of this function, we recommend that you connect your HDMI component not to a TV but rather directly to the HDMI terminal on this receiver.
- The Control with HDMI function works on the TV connected to the HDMI OUT 1 terminal. It does not work on TVs connected to the HDMI OUT 2 or HDMI OUT 3 terminals.

**HDMI Setup**

You must adjust the settings of this receiver as well as the connected Control with HDMI-compatible components in order to make use of the Control with HDMI function. For more information see the operating instructions for each component.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

2. Select ‘System Setup’, then press ENTER.

3. Select ‘HDMI Setup’, then press ENTER.

4. Select the ‘Control’ setting you want.
Choose whether to set this unit’s Control with HDMI function ON or OFF. You will need to set it to ON to use the Control with HDMI function.

When using a component that does not support the Control with HDMI function, set this to OFF.

- ON – Enables the Control with HDMI function. Set Control Mode, ARC and PQLS in the subsequent setting items to the desired values.
- OFF – The Control with HDMI is disabled. The Control Mode. ARC and PQLS functions in the subsequent setting items cannot be used.

5. Select the ‘Control Mode’ setting you want.
Choose whether you want to enable synchronized operations.

- ON – Enables for the synchronized operations.
- OFF – The synchronized operations disabled.

6. Select the ‘ARC’ setting you want.
When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT 1 terminal.

After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.

- ON – The TV’s sound is input via the HDMI terminal.
- OFF – The TV’s sound is input from the Audio input terminals other than HDMI inputs.

7. Select the ‘PQLS’ setting you want.
Choose whether to set this unit’s PQLS function AUTO or OFF.

For details about PQLS function, see Setting the Video options on page 79.

- AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.
- OFF – PQLS is disabled.

8. Select the ‘Standby Through’ setting you want.
It is possible to transfer signals from an HDMI-connected player to the TV when this receiver’s power is on standby.

Select the HDMI input whose HDMI signal is to be input for through transfer when in the standby mode.

When LAST is selected, the signal being input to the currently selected HDMI input is transferred. When OFF is selected, no HDMI input is transferred through when in the standby mode. (However, when Control is set to ON, the HDMI signal is transferred through by the Control with HDMI function even in the standby mode.)

- When anything other than OFF is set for this setting, the receiver’s HDMI input can be switched even when the receiver is in the standby mode. (Switch by pointing the remote control at the receiver and pressing the HDMI, BD, DVD or SAT/CBL button.)
- Setting to anything other than OFF increases power consumption in the standby mode.

9. Select the ‘12V Trigger’ setting you want.
The component connected to the 12V TRIGGER jack can be turned on and off when HDMI OUT is switched.

OUT 1, OUT 2, OUT 3 or OFF can be selected. Select OFF when you want the component to switch when the input function is switched.
Before using synchronization
Once you have finished all connections and settings, you must:

1. Put all components into standby mode.
2. Turn the power on for all components, with the power for the TV being turned on last.
3. Choose the HDMI input to which the TV is connected to this receiver, and see if video output from connected components displays properly on the screen or not.
4. Check whether the components connected to all HDMI inputs are properly displayed.

About synchronized operations

- **Important**
  - Synchronized operations are enabled when Control Mode is set to ON after setting Control in HDMI Setup to ON. For details, see HDMI Setup on page 73.
  - The Control with HDMI-compatible component connected to the receiver operates in sync as described below.
  - From the menu screen of the Control with HDMI-compatible TV, set audio to be played through this receiver, and the receiver will switch to the synchronized amp mode.
  - When in the synchronized amp mode, you can adjust the receiver’s volume or mute the sound using the TV’s remote control.
  - When in the synchronized amp mode, the synchronized amp mode is canceled when the receiver’s power is turned off. To turn the synchronized amp mode back on, set audio to be played through the receiver from the TV’s menu screen, etc. This receiver will power up and switch to the synchronized amp mode.
  - When the synchronized amp mode is canceled, the receiver’s power turns off if you were viewing an HDMI input or a TV program on the TV.
  - When in the synchronized amp mode, the synchronized amp mode is canceled if an operation that produces sound from the TV is performed from the TV’s menu screen, etc.
  - When the TV’s power is set to standby, the receiver’s power is also set to standby. (Only when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV.)
  - The receiver’s input switches automatically when the Control with HDMI-compatible component is played.
  - The receiver’s input switches automatically when the TV’s input is switched.
  - The synchronized amp mode remains in effect even if the receiver’s input is switched to a component other than one connected by HDMI.

The operations below can also be used on Pioneer Control with HDMI-compatible TVs.

- When the receiver’s volume is adjusted or the sound is muted, the volume status is displayed on the TV’s screen.
- When the OSD language is switched on the TV, the receiver’s language setting also switches accordingly.

Setting the PQLS function

PQLS (Precision Quartz Lock System) is a digital audio signal transfer control technology using the Control with HDMI function. It offers higher-quality audio playback by controlling audio signals from the receiver to a PQLS compatible player, etc. This enables removing jitter that has a negative effect on the quality of the sound and is generated upon transmission.

- On players compatible with PQLS Bit-stream, PQLS always works for all sources.
- On players compatible with PQLS Multi Surround, PQLS works for all sources. Set the player’s audio output to Linear PCM.
- On players compatible with PQLS 2ch Audio, PQLS only works when playing CDs. Please refer to the operating instructions supplied with your player for more information.

This function is activated when Control is set to ON.

**Tip**

- The PQLS setting is set at PQLS in HDMI Setup on the HOME MENU, but the setting can also be switched with the remote control, as described below.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.
2. Use †/ ‡ to select ‘PQLS’.
3. Use ↔/↕ to select the PQLS setting.

The setting is displayed on the front panel display.

- AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.
- OFF – PQLS is disabled.

About Sound Retriever Link and Stream Smoother Link

These are automatic functions allowing you to output optimum audio and video signals from the receiver using the Control with HDMI function. When a player supporting the respective function is connected to the receiver by HDMI, the sound/picture is optimized on the receiver based on this information. To activate the Sound Retriever Link function, make the setting below.

1. Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON.

   See HDMI Setup on page 73.

2. Set the S.RTRV (Auto Sound Retriever) setting to ON.

   See Setting the Audio options on page 77.
Stream Smoother Link

Using the Control with HDMI function, the receiver automatically detects whether a compressed video file is being played on the player, and if so automatically activates the Stream Smoother function.

To activate the Stream Smoother Link function, make the setting below.

1. Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON.
   See HDMI Setup on page 73.

2. Set the STREAM (Stream Smoother) setting to AUTO.
   See Setting the Video options on page 79.

Cautions on the Control with HDMI function

- Connect the TV directly to this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.
- Only connect components (Blu-ray Disc player, etc.) you intend to use as a source to the HDMI input of this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.
- When the receiver’s Control is turned ON, even if the receiver’s power is in the standby mode, it is possible to output the audio and video signals from a player via HDMI to the TV without producing sound from the receiver, but only when a Control with HDMI-compatible component (Blu-ray Disc player, etc.) and compatible TV are connected. In this case, the receiver’s power turns on and the power and HDMI indicators light.
- If the Control setting is not set to OFF, the power consumption during standby will increase.

Setting the Audio options

There are a number of additional sound settings you can make using the AUDIO PARAMETER menu. The defaults, if not stated, are listed in bold.

Important
• Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.
2 Use † / ‡ to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
3 Use ⇧ / ⇨ to set as necessary. See the table below for the options available for each setting.
4 Press RETURN to confirm and exit the menu.

Using other functions
### Setting | What it does | Option(s)
---|---|---
**Fixed PCM**<br>(Loudness Management)<br>(Dynamic Range Control)<br>(Virtual Surround Back) | This is useful if you find there is a slight delay before OFF recognizes the PCM signal on a CD, for instance. When ON is selected, noise may be output during playback of non-PCM sources. Please select another input signal if this is a problem. | OFF: ON, MID, MAX, AUTO <br>ON: OFF <br>MID: MID, ON <br>MAX: MAX, OFF <br>AUTO: AUTO, ON, MID, MAX

**DRC**<br>(Dynamic Range Control)<br>(Virtual Surround Back) | Adjusts the level of dynamic range for movie soundtracks optimized for Dolby Digital, DTS, Dolby Digital Plus, Dolby TrueHD, DTS-HD Master Audio (you may need to use this feature when listening to surround sound at low volumes). When OFF is selected, the sound is not output from the LFE channel. | ON: OFF, MID, MAX <br>MID: MID, ON <br>MAX: MAX, OFF

**Loud Mgmt**<br>(Loudness Management)<br>(Virtual Surround Back) | This is a setting of the post process function of the Dolby TrueHD decoder. By setting to OFF, you can enjoy higher sound quality. This can only be set when DRC is set to OFF and the input signal is a Dolby TrueHD signal. | OFF: ON, MID, MAX, AUTO <br>ON: OFF <br>MID: MID, ON <br>MAX: MAX, OFF <br>AUTO: AUTO, ON, MID, MAX

**LFE**<br>(LFE Attenuate)<br>(Virtual Surround Back) | Some audio sources include ultra-low bass tones. Set the LFE attenuator as necessary to prevent the ultra-low bass tones from distorting the sound from the speakers. When set to the recommended value of 0 dB, the LFE is not restricted. When set to a value other than 0 dB, the LFE is restricted to the set value. When OFF is selected, the sound is not output from the LFE channel. | OFF: ON, MID, MAX <br>ON: OFF, MID, MAX, AUTO <br>MID: MID, ON <br>MAX: MAX, OFF, AUTO

**INPUT ATT**<br>(Input attenuate)<br>(Virtual Surround Back) | If the sound is distorted, this can be used to lower the input signal level and reduce the distortion. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**HDMI**<br>(HDMI Audio)<br>(Virtual Surround Back) | Specifies the routing of the HDMI audio signal out of this receiver (amp) or through to a TV. When THROUGH is selected, no sound is output from this receiver. | AMP: THROUGH, OFF, MID, MAX, AUTO <br>THROUGH: AMP, OFF, MID, MAX, AUTO

**A.DELAY**<br>(Auto delay)<br>(Virtual Surround Back) | This feature automatically corrects the audio-to-video delay between components connected with an HDMI cable. The audio delay time is set depending on the operational status of the display connected with an HDMI cable. The video delay time is automatically adjusted according to the audio delay time. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**C.GAIN**<br>(Center Gain)<br>(Applicable only when using a center speaker)<br>(Virtual Surround Back) | Adjusts the center gain to create a wider stereo effect with vocals. Adjust the effect from 0 (all center channel sent to front right and left speakers) to 1.0 (center channel sent to the center speaker only). | AUTO: AUTO, OFF, MID, MAX <br>OFF: AUTOMATICALLY COMPLEMENTED, 0.0, 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 0.9, 1.0 <br>MID: MID, MAX, OFF <br>MAX: MAX, OFF

**EFFECT**<br>(Virtual Surround Back) | Sets the effect level for the ALC mode. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**C.SPREAD**<br>(Center Spread)<br>(Virtual Surround Back) | Center spread expands the center channel signal to the left and right front speakers to create a wider frontal audio image for the listener. It is optimized and designed primarily for playback of stereo music content. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**V.SPs**<br>(Virtual Speakers)<br>(Virtual Surround Back) | When AUTO is selected, the sound field is created with the surround back channel behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**V.SB**<br>(Virtual Surround Back)<br>(Virtual Surround Back) | When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

---

**Setting** | What it does | Option(s)
---|---|---
**V.HEIGHT**<br>(Virtual Height)<br>(Virtual Surround Back) | When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**V.WIDE**<br>(Virtual Wide)<br>(Virtual Surround Back) | When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers. This improves the continuity of the sound from the front channel to the surround channels. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**V.DEPTH**<br>(Virtual Depth)<br>(Virtual Surround Back) | When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence. | OFF: ON, MID, MAX, AUTO <br>ON: OFF, MID, MAX, AUTO

**AMP**<br>(Virtual Surround Back) | This is set to turn power amplifier sections off and use channels exclusively in the pre-amp mode. Select ON to use the power amplifiers for all channels. Select Front OFF to turn off the front channel’s power amplifier and use the front channel exclusively in the pre-amp mode. F&C OFF to turn off the front and center channels’ power amplifiers and use the front and center channels exclusively in the pre-amp mode. To turn the power amplifiers for all channels off and use them exclusively in the pre-amp mode, select OFF. | OFF: OFF, MID, MAX, AUTO <br>ON: Front OFF, F&C OFF, OFF <br>MID: OFF, MID, MAX, AUTO <br>MAX: OFF, MID, MAX, AUTO <br>AUTO: OFF, MID, MAX, AUTO
Setting the Video options

There are a number of additional picture settings you can make using the VIDEO PARAMETER menu. The defaults, if not stated, are listed in bold.

Important
- When MAIN/HDZONE is set to HDZONE, the VIDEO PARAMETER menu setting works only for the signal of the HDMI OUT 1 and HDMI OUT 2 terminals.
- Also, when HDZONE is set to ON, VIDEO PARAMETER cannot be set (does not work).
- Note that if an option cannot be selected on the VIDEO PARAMETER menu, it is unavailable due to the current source, setting and status of the receiver.
- All of the setting items can be set for each input function.
- However, with the audio only input function, VIDEO PARAMETER cannot be set.
- Also, when HDZONE is set to ON, VIDEO PARAMETER cannot be set (does not work).
- Setting items other than V.CONV can only be selected when V.CONV is set to ON.

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press VIDEO P.
2 Use † / ‡ to select the setting you want to adjust.
   Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
3 Use ←/→ to set as necessary.
   See the table below for the options available for each setting.
4 Press RETURN to confirm and exit the menu.

(The image is only an example for checking the effect.)
Switching the output (OUTPUT PARAMETER)

You can press OUT P. to switch the output of speaker terminals or HDMI terminals to be played.

Switching the speaker terminals

If you select 7.2.2ch TMD/FW, 7.2.2ch TMD/FH or 7.2ch + Speaker B at Speaker system setting on page 101, you can switch between speakers using the OUT P. button.

1. Press OUT P.

2. Use \( \uparrow/\downarrow \) to select ‘SP’.

3. Use \( \leftrightarrow \rightarrow \) to switch the speaker terminals to be played.

As mentioned above, if you have selected 7.2ch + Front Bi-Amp, 7.2ch + HDZONE, 5.2.4ch, 5.2 Bi-Amp+HDZONE, 5.2ch + SP-B Bi-Amp, 5.2ch F+Surf Bi-Amp, 5.2ch F+C Bi-Amp, 5.2ch C+Surf Bi-Amp, Multi-ZONE Music, 5.2 +ZONE 2+HDZONE or 5.2 +ZONE 2+ZONE 3, the button will simply switch your main speaker terminal (A) on or off (Pre-AMP mode).

The pre-amp mode is a mode for reducing power consumption when power amplifiers are connected to the receiver’s PRE OUT terminals by individually turning off the power of the amplifiers for those channels.

Press repeatedly to choose a speaker terminal option:

When you select 7.2.2ch TMD/FW, you can select from:

- **SP**: TMD/FW ON – Top middle or front wide channels are added to the front, center, surround and surround back channels (maximum 7 channels) and a maximum of 9 channels are output. The top middle and front wide channels are switched automatically according to the audio input signal.

- **SP**: TMD ON – Top middle channels are added to the front, center, surround and surround back channels (maximum 7 channels) and a maximum of 9 channels are output.

- **SP**: FW ON – Front wide channels are added to the front, center, surround and surround back channels (maximum 7 channels) and a maximum of 9 channels are output.

- **SP**: OFF – No sound is output from the speakers.

When you select 7.2.2ch TMD/FH, you can select from:

- **SP**: TMD/FH ON – Top middle or front wide channels are added to the front, center, surround and surround back channels (maximum 7 channels) and a maximum of 9 channels are output. The top middle and front height channels are switched automatically according to the audio input signal.

- **SP**: TMD ON – Top middle channels are added to the front, center, surround and surround back channels (maximum 7 channels) and a maximum of 9 channels are output.

- **SP**: FH ON – Front height channels are added to the front, center, surround and surround back channels (maximum 7 channels) and a maximum of 9 channels are output.

- **SP**: OFF – No sound is output from the speakers.

When you select 7.2ch + Speaker B, you can select from:

- **SP**: A ON – Sound is output from the A-speaker terminals (up to 9 channels including front height channel), depending on the source.

- **SP**: B ON – Sound is output from the two speakers connected to the B-speaker terminals. Multichannel sources will not be heard.

- **SP**: A+B ON – Sound is output from the A-speaker terminals (up to 7 channels, depending on the source), the two speakers connected to the B-speaker terminals, and the subwoofer. The sound from the B-speaker termina-

- **SP**: OFF – No sound is output from the speakers.
Switching the HDMI output

Set which terminal to use when outputting video and audio signals from the HDMI output terminals.

1. **Press OUT P.**
2. **Use ↑/↓ to select ‘OUT 1/2’**.
3. **Use ←/→ to select the output settings for the HDMI OUT 1 and HDMI OUT 2 terminals**. Please wait a while when **Please wait...** is displayed.
   - The output switches among **OUT 1+2**, **OUT 1**, **OUT 2**, and **OFF** each time the button is pressed.
   - The synchronized amp mode is canceled when the HDMI output is switched. If you wish to use the synchronized amp mode, switch to **OUT 1**, then select the synchronized amp mode on the TV using the TV’s remote control.
4. **Use ↑/↓ to select ‘OUT 3’**.
5. **Use ←/→ to select the output settings for the HDMI OUT 3 terminal**. Please wait a while when **Please wait...** is displayed.
   - The setting switches between **ON** and **OFF** each time this is pressed.
   - When MAIN/HDZONE is set to HDZONE, the output of the HDMI OUT 3 terminal cannot be switched.
6. **When you’re finished, press RETURN.**

About the Speaker B Link function

When 7.2ch + Speaker B or 5.2ch + SP-B Bi-Amp is selected for the Speaker System setting (page 101) and Speaker B Link (HDMI Setup on page 79) is set to “ON”, the setting of the speaker terminals that are played changes automatically when HDMI OUT 1 and HDMI OUT 2 are switched. For details, see **Switching the HDMI output** on page 82.

- The subwoofer output depends on the settings you made in Manual speaker setup on page 101. However, if **SP: B ON** is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).
- All speaker systems (except 7.2ch + Speaker B connections) are switched off when headphones are connected.

HDMI 4K/60p signal output setting

If the TV to be connected using HDMI supports 4K/60p, you can switch the 4K/60p signal output setting in accordance with TV performance. Operation is performed on the front panel of the unit. You cannot perform the setting if the multizone function is not set to **MULTI ZONE OFF** (page 83).

1. **Switch the receiver into standby.**
2. **While holding down ENTER on the front panel, press ◀ STANDBY/ON.**
   - The display shows **RESET ◀ NO ▶**.
3. **Use ◀/▶ to select ‘4K/60p’**.
4. **Use ◀/▶ to select the signal to set.**
   - **4:4:4** – Select this setting when connecting to a 4K/60p 4:4:4 24 bit compatible TV using HDMI. More high quality video images can be enjoyed.
     - When the HDMI cable does not support 4K/60p 4:4:4 24 bit (18 Gbps transmission), video image may not be output properly. In that case, select **4:2:0** to watch a 4K/60p 4:2:0 24 bit video image.
   - **The HDMI OUT 3 terminal does not output a 4K/60p 4:4:4 24 bit video image if MAIN/HDZONE is set to HDZONE.**
   - **4:2:0** – Select this setting when connecting to a 4K/60p 4:2:0 24 bit compatible TV using HDMI.
5. **When you’re finished, press RETURN.**
6. **Press ◀ STANDBY/ON to switch on the receiver and your TV.**
   - Make sure that the TV’s video input is set to this receiver.

Changing the channel level while listening

Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1. **Press CH LV.**
2. **Use ↑/↓ to select the channel you wish to adjust.**
3. **Adjust the volume using ◀/▶.**
   - The volume can be adjusted in the range of **-12.0dB** to **+12.0dB**, 0.5 dB steps.
4. **When you’re finished, press RETURN.**

Input Volume Absorber

This can be used to correct for the difference in volume between input sources.

1. **Switch to the input whose volume you want to adjust.**
2. **Press CH LV.**
3. **Use ◀/▶ to select ‘ALL’.**
4. **Adjust the volume using ◀/▶.**
   - The volume can be adjusted in the range of **-12.0dB** to **+12.0dB**, 0.5 dB steps.
5. **When you’re finished, press RETURN.**
Using the MULTI-ZONE controls

The following steps use the front panel controls to adjust the sub zone volume and select sources. See ZONE 2 remote controls and HDZONE remote controls on page 83.

Important
- The settings must be changed at ZONE Setup in order to use the multi-zone function (page 107).

1. Press the button on the front panel for the zone you want to operate (ZONE 2 ON/OFF, ZONE 3 ON/OFF or HDZONE ON/OFF).
   The zone switches between on and off each time the button is pressed. The MULTI-ZONE indicator lights when the MULTI-ZONE control has been switched ON.

2. Press MULTI-ZONE CONTROL on the front panel to select the sub zone(s) you want.
   - When the receiver is on, make sure that any operations for the sub zone are done while ZONE and your selected sub zone(s) show in the display. If this is not showing, the front panel controls affect the main zone only.
   - If the receiver is in standby, the display is dimmed, and ZONE and your selected sub zone(s) continue to show in the display.

3. Use the INPUT SELECTOR dial to select the source for the zone you have selected.
   For example, ZONE 2 SAT/CBL sends the source connected to the SAT/CBL inputs to the primary (ZONE 2) sub room.
   - If you select TUNER, you can use the tuner controls to select a preset station (see Saving station presets on page 54 if you’re unsure how to do this). The tuner cannot be tuned to more than one station at a time. Therefore, changing the station in one zone also changes the station in the other zone. Please be careful not to change stations when recording a radio broadcast.

4. Use the MASTER VOLUME dial to adjust the volume for the sub zone.
   When Speaker System is set to anything other than 5.2 +ZONE 2+ZONE 3, 5.2 +ZONE 2+HDZONE or Multi-ZONE Music, the volume output from the receiver’s AUDIO ZONE 2 OUT terminals can be fixed to –40 dB or 0 dB and the volume can be adjusted from the connected amplifier. If you want to adjust the volume from the connected amplifier, see ZONE Setup on page 107.

5. When you’re finished, press MULTI-ZONE CONTROL again to return to the main zone controls.
   You can also press ZONE 2 ON/OFF, ZONE 3 ON/OFF or HDZONE ON/OFF on the front panel to switch off all output to the sub zone.
   - You won’t be able to switch the main zone off completely unless you’ve switched off the MULTI-ZONE control first.
   - If you don’t plan to use the MULTI-ZONE feature for a while, turn off the power in both the sub and main rooms so that this receiver is in standby.

Note
When HDZONE is turned on, the video converter function is disabled. For that reason, video connected with the video cable or component cable is not output from the HDMI terminal. Also, upscaling of the HDMI input video cannot be performed. To enable the video converter function, turn off HDZONE.

ZONE 2 remote controls

Before operation, hold down Z2 on the remote control (for 1.5 seconds) until the remote control LED flashes one time. The following table shows the possible ZONE 2 remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Switches on/off power in the sub zone.</td>
</tr>
<tr>
<td>ALL</td>
<td>Use to select the input function in the sub zone.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function directly (this may not work for some functions) in the sub zone.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the sub zone.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

a • The volume cannot be adjusted on the receiver if Volume Level at ZONE 2 Setup under ZONE Setup is set to –40 dB Fixed or 0 dB Fixed.

ZONE 3 remote controls

Before operation, hold down Z3 on the remote control (for 1.5 seconds) until the remote control LED flashes one time. The following table shows the possible ZONE 3 remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Switches on/off power in the sub zone.</td>
</tr>
<tr>
<td>ALL</td>
<td>Use to select the input function in the sub zone.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function directly (this may not work for some functions) in the sub zone.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the sub zone.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

a • The volume cannot be adjusted on the receiver if Volume Level at ZONE 3 Setup under ZONE Setup is set to –40 dB Fixed or 0 dB Fixed.

HDZONE remote controls

Before operation, hold down HDZ on the remote control (for 1.5 seconds) until the remote control LED flashes one time. The following table shows the possible HDZONE remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Switches on/off power in the HDZONE.</td>
</tr>
<tr>
<td>ALL</td>
<td>Use to select the input function in the HDZONE.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function directly (this may not work for some functions) in the HDZONE.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the HDZONE.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

a You can operate this only when Speaker System is set to 7.2ch + HDZONE, 5.2 Bi-Amp+HDZONE or 5.2 +ZONE 2+HDZONE.
Making an audio or a video recording

You can make an audio or a video recording from the built-in tuner, or from an audio or video source connected to the receiver (such as a CD player or TV).

Keep in mind you can’t make a digital recording from an analog source or vice versa, so make sure the components you are recording to/from are hooked up in the same way (see Connecting your equipment on page 19 for more on connections).

The receiver’s volume, Audio parameters (the tone controls, for example), and surround effects have no effect on the recorded signal.

Some digital sources are copy-protected, and can only be recorded in analog.

Some video sources are copy-protected. These cannot be recorded.

Since the video converter is not available when making recordings (from the video OUT jacks) make sure to use the same type of video cable for connecting your recorder as you used to connect your video source (the one you want to record) to this receiver. For example, you must connect your recorder using Component video if your source has also been connected using Component video.

1 Select the source you want to record. You can use the input function buttons on the remote control or the front panel INPUT SELECTOR dial.

2 Prepare the source you want to record. Tune to the radio station, load the CD, video, DVD etc.

3 Select the input signal according to the signal to be recorded. Use the remote control’s AUDIO P. button.

4 Prepare the recorder. Insert a blank tape, MD, video etc. into the recording device and set the recording levels. Refer to the instructions that came with the recorder if you are unsure how to do this. Most video recorders set the audio recording level automatically—check the component’s instruction manual if you’re unsure.

5 Start recording, then start playback of the source component.

Using the sleep timer

The sleep timer switches the receiver into standby after a specified amount of time so you can fall asleep without worrying about the receiver being left on all night. Use the remote control to set the sleep timer.

- Press SLEEP repeatedly to set the sleep time.

| 30 min | 60 min | Off | 90 min |

- You can check the remaining sleep time at any time by pressing SLEEP once. Pressing repeatedly will cycle through the sleep options again.

- The sleep timer is valid for all zones. If any zone is on, the sleep timer continues functioning.

Dimming the display

You can choose between four brightness levels for the front panel display. Note that when selecting sources, the display automatically brightens for a few seconds.

Turning off the display is effective for suppressing noise from the display that affects sound quality.

- Press DIMMER repeatedly to change the brightness of the front panel display.

- You can also choose to turn the display off. In this case, the FL OFF indicator lights.

Checking your system settings

Use the status display screen to check your current settings for features such as surround back channel processing and your current MCACC preset.

1 Press STATUS.

2 Use ↑/↓ to check the system setting. The information on the main unit display switches as shown below each time one of the buttons is pressed.

IP address — Audio format — Sampling frequency — MCACC memory — Auto phase control plus correction value — Input source to be played in ZONE 2 — Input source to be played in ZONE 3 — Input source to be played in HDZONE — HDMI output setting — Subzone to which HDZONE is output

- For some settings, some items are not displayed.

3 When you’re finished, press STATUS again to switch off the display.

Network settings from a web browser

Network settings can be made using the browser on a computer connected to the same LAN as the receiver.

1 Press STANDBY/ON to switch on the receiver.

2 Turn on the computer’s power and launch the Internet browser.

3 Input the receiver’s IP address into the browser’s address input field. Access the IP address “http://(the receiver’s IP address)” from a web browser. You can display the IP address of the unit on the unit’s display by pressing the STATUS button on the remote control. When connected with the receiver, the AVNavigator menu screen appears in the browser.

4 On the AVNavigator menu screen, select Network Setup.

5 Select the item you want to set.
Using other functions

Resetting the system

Use this procedure to reset all the receiver’s settings to the factory default. Use the front panel controls to do this.

- Set MULTI-ZONE to MULTI ZONE OFF.
- Disconnect the iPod and USB memory device from the receiver beforehand.
- Set the Control with HDMI to OFF (see HDMI Setup on page 73).

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press STANDBY/ON. The display shows RESET NO.
3. Select ‘RESET’ using PRESET, then press ENTER on the front panel. The display shows RESET? OK.
4. Press ENTER to confirm. OK appears in the display to indicate that the receiver has been reset to the factory default settings.

Note that all settings will be saved, even if the receiver is unplugged.

About the Remote Setup menu

The Remote Setup menu is set by pressing the number button while pressing RCU SETUP. The different items on the Remote Setup menu are described below. For their setting procedures, refer to the explanations for the respective items.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change RC mode</td>
<td>If you have multiple Pioneer receivers, amplifiers, etc., this setting can be used to prevent other units from operating simultaneously when the remote control unit is operated. See Operating multiple receivers on page 87.</td>
</tr>
<tr>
<td>Preset recall</td>
<td>Preset codes can be set for the various input functions. The remote control codes of a number of other devices (including products of other brands) are preset in the remote control to allow these devices to be operated after input functions are erased. See Setting preset codes on page 87.</td>
</tr>
<tr>
<td>Code learning</td>
<td>If the desired operations cannot be performed even though you have set the preset codes, the remote control signals of other devices can be learned. This is useful for multi-brand systems. See Programming signals from other remote controls on page 85.</td>
</tr>
<tr>
<td>Erase learning</td>
<td>This function is used to erase remote control codes that have been learned. Codes learned for the different input functions can be erased individually. See Erasing one of the remote control button settings on page 85.</td>
</tr>
<tr>
<td>Back light</td>
<td>The backlight lighting pattern can be selected from among four modes, in consideration of convenience and battery service life. See Setting the backlight mode on page 85.</td>
</tr>
<tr>
<td>Reset function</td>
<td>This is a function for resetting preset codes that have been set. Key resetting can be done for individual input functions. See Erasing one of the remote control button settings on page 85.</td>
</tr>
<tr>
<td>Operation mode switching</td>
<td>You can set the remote control to automatically switch to AV amplifier operation mode when a period of time elapses when you have performed a function. See Setting the switching time of AV amplifier operation mode on page 85.</td>
</tr>
<tr>
<td>All reset</td>
<td>This is a function for resetting all remote control unit settings you have made to the defaults set upon shipment from the factory. See Resetting the remote control settings on page 85.</td>
</tr>
</tbody>
</table>

Notes

- You can cancel or exit any of the steps by pressing RCU SETUP.
- After one minute of inactivity, the remote automatically exits the operation.

Operating multiple receivers

Up to four receivers can be operated discretely using this receiver’s remote control when using multiple receivers, provided they are of the same model as this receiver. The receiver to be operated is switched by inputting the preset code to set the remote control setting.

- Set the remote modes on the receivers before using this function (see Remote Control Mode Setup on page 106).

1. Press and hold RCU SETUP, then press ‘4’ for three seconds.
2. Press the number button for the receiver (“Receiver 1” to “Receiver 4”) you wish to operate.

For example, to operate “Receiver 2”, press ‘2’.

If the LED lights for one second, the setting has been successfully completed. When the preset code is input, the LED flashes three times to indicate that the setting has failed.

Setting the remote to control other components

Most components can be assigned to one of the input function buttons (such as DVD or CD) using the component’s manufacturer preset code stored in the remote.

However, there are cases where only certain functions may be controllable after assigning the proper preset code, or the codes for the manufacturer in the remote control will not work for the model that you are using. If you can’t find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 85).

- With the TV buttons, the TV can be operated regardless of the input set for the remote control’s operation mode. When using one TV set, we recommend assigning the same TV’s preset codes to the TV INPUT button and the TV button. When using two TV sets, for better convenience assign the TV connected to the MONITOR OUT terminals to the TV INPUT button, the other TV to the TV button.
- Devices may be assigned to the following input function buttons:
  - TV, CD, DVD, VCR, SAT, CAM, BD, DVR, GAME, AUX, STANDBY/ON

Selecting preset codes directly

1. Press and hold RCU SETUP, then press ‘1’ for three seconds.
2. Release the button after the LED flashes once. The LED continues to flash.
   - To cancel the preset setup mode press RCU SETUP.
3. Press the input function button for the component you want to control.
   To assign the preset codes of the TV to be operated with the TV function, press the TV INPUT button. The LED of the remote control lights.
4. Use the number buttons to enter the 4-digit preset code.
   See Preset code list on page 131.
   - If the LED lights for one second and continues to flash, the setting has been successfully completed. When the preset code is fully input, the LED flashes three times to indicate that the setting has failed. If this happens, enter the 4-digit preset code again.
5. Repeat steps 2 through 3 for the other components you want to control.
   To try out the remote control, switch the component on or off (into standby) by pressing SOURCE. If it doesn’t seem to work, select the next code from the list (if there is one).
6. Press RCU SETUP to exit the preset setup mode.
Programming signals from other remote controls

If the preset code for your component is not available, or the available preset codes do not operate correctly, you can program signals from the remote control of another component. This can also be used to program additional operations (buttons not covered in the presets) after assigning a preset code.

The remote can store about 120 preset codes from other components (this has been tested with codes of Pioneer format only).

Certain buttons represent operations that cannot be learned from other remote controls. The buttons available are shown below:

1 Press and hold RCU SETUP, then press ‘2’ for three seconds. Release the button after the LED flashes once. The LED continues to flash.
   • To “learn” codes at the TV buttons, proceed to step 3.
   • To cancel the preset setup mode press RCU SETUP.
2 Press the input function button for the component you want to control. The LED blinks once and flashes continuously.
3 Point the two remote controls towards each other, then press the button that will be doing the learning on this receiver’s remote control. The LED flashes once, then stops flashing, remaining lit.
   • The remote controls should be 3 cm apart.
4 Press the corresponding button on the other remote control that is sending (teaching) the signal to this receiver’s remote control. If the LED lights for one second and continues to flash, the setting has been successfully completed.
   • If the LED flashes for five seconds, it means the memory is full. See Erasing all learnt settings that are in one input function on page 89 to erase a programmed button you’re not using to free up more memory (note that some signals may take more memory than others).
   • Note that interference from TVs or other devices will sometimes result in the remote control learning the wrong signal.
   • Some commands from other remote controls cannot be learned, but in most cases the remotes just need to be moved closer together or farther apart.
5 To program additional signals for the current component repeat steps 3 and 4. To program signals for another component, exit and repeat steps 2 through 4.
6 Press RCU SETUP to exit the programming mode.

Erasing one of the remote control button settings

This erases one of the buttons you have programmed and restores the button to the factory default.

1 Press and hold RCU SETUP, then press ‘8’ for three seconds. Release the button after the LED flashes once. The LED continues to flash.
   • To erase operations registered at the TV buttons, proceed to step 3.
   • To cancel the preset setup mode press RCU SETUP.
2 Press the input function button corresponding to the command to be erased. The LED flashes once.
3 Press and hold the button to be erased for three seconds. If the LED lights for one second, the erasing has been successfully completed.
4 Repeat step 3 to erase other buttons.
5 Press RCU SETUP to exit the erasing mode.
Erasing all learnt settings that are in one input function
This operation erases all the operational settings of other devices that have been programmed in one input function, and restores the factory default. This function is handy for erasing all data programmed for devices no longer being used.

1 Press and hold RCU SETUP, then press ‘9’ for three seconds.
Release the button after the LED flashes once. The LED continues to flash.
   • To cancel the preset setup mode press RCU SETUP.
2 Press and hold the input function button corresponding to the command to be erased for three seconds.
   To erase the operations registered at all the TV buttons, press the TV INPUT button for 3 seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Setting the backlight mode
• Default setting: 1 (normal mode)
The backlight lighting pattern can be selected from among four modes, in consideration of convenience and battery service life.

1 Press and hold RCU SETUP, then press ‘6’ for three seconds.
Release the button after the LED flashes once. The LED continues to flash.
   • To cancel the preset setup mode press RCU SETUP.
2 Press the number button for the backlight mode you want to set.
   • 1 (normal mode) – The backlight is turned on and off with the light button. After it lights, it turns off automatically if no operation is performed for 10 seconds.
   • 2 (frequent lighting mode) – The backlight turns on when any button on the remote control is pressed. It is turned off with the light button. After it lights, it turns off automatically if no operation is performed for 10 seconds.
   • 3 (eco mode) – The backlight is turned on and off with the light button. After it lights, it turns off automatically if no operation is performed for 5 seconds.
   • 4 (off mode) – The backlight does not turn on even when the light button is pressed.
   If the LED lights for one second and continues to flash, the setting has been successfully completed.
   If the LED flashes three times, the setting has failed.
3 Press RCU SETUP to exit the setup.

Using All Zone Standby
The All Zone Standby can be used to turn all zones to OFF when the receiver’s power is switched to standby. Also, when using separate Pioneer amplifiers/receivers for the sub zones, they can also be set to standby simultaneously.
   • In order to set the power of amplifiers/receivers connected to sub zones to the standby mode, the connected amplifiers/receivers must be installed or connected in such a way that they can receive remote control signals.
   • The power of the amplifiers/receivers can be switched to standby with this operation even when using multiple Pioneer amplifiers/receivers and their Remote Control Mode have been changed.

1 Press ALL ZONE STBY.
The LED continues to flash.
2 Press STANDBY/ON.
The receiver’s power switches to standby and all zones are turned off.

Setting the switching time of AV amplifier operation mode
• Default setting: The AV amplifier operation mode is not switched automatically.
   After pressing SOURCE CONTROL to operate another device, you need to press MAIN RECEIVER to switch the mode to AV amplifier operation mode to operate this receiver.
   You can set to automatically switch to AV amplifier operation mode when a certain period of time elapses after remote operation of each input function is finished. See Setting the switching time of AV amplifier operation mode on page 89.

1 Press and hold RCU SETUP, then press ‘5’ for three seconds.
The LED flashes once.
2 Press the number buttons of the time you wish to set.
   • 1 – The mode is not automatically switched to AV amplifier operation mode.
   • 2 – Switches in five minute.
   • 3 – Switches in three minute.
   • 4 – Switches in one minute.
   • 5 – Switches in 30 seconds.
3 Press RCU SETUP to exit the setup.

Resetting the remote control settings
Use this procedure to reset all the remote control’s settings to the factory default.
   • When preset codes are set, all the signals learned in the input function buttons are cleared. This function is convenient when you want to reset some but not all of input function buttons.

1 Press and hold RCU SETUP, then press ‘0’ for three seconds.
Release the button after the LED flashes once. The LED continues to flash.
2 Hold down the ENTER button for five seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Default preset codes

The MCACC PRO menu

Making receiver settings from the MCACC PRO menu ..............................................................93
Automatic MCACC (Expert) ...........................................................................................................93
Manual MCACC setup ...................................................................................................................95
Checking MCACC Data ..................................................................................................................97
Data Management .........................................................................................................................98
Making receiver settings from the MCACC PRO menu

The MCACC (Multi Channel ACoustic Calibration) PRO system was developed in Pioneer's laboratories with the aim of making it possible for home users to perform adjustments of the same level as in a studio easily and with high precision. The acoustic characteristics of the listening environment are measured and the frequency response is calibrated accordingly to allow high precision, automatic analysis and optimal calibration of the sound field to bring it closer to a studio environment than ever before. Furthermore, while it was previously difficult to eliminate standing waves, this receiver is equipped with a standing wave control function using a unique process to perform acoustic analysis and reduce their influence.

This section describes how to calibrate the sound field automatically and fine-adjust the sound field data manually.

1. Press STANDBY/ON to switch on the receiver and your TV.
   Make sure that the TV’s video input is set to this receiver.

2. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use \( \uparrow/\downarrow/\leftarrow/\rightarrow/\) and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
   - Press HOME MENU at any time to exit the HOME MENU.

3. Select ‘MCACC PRO’ from the HOME MENU, then press ENTER.

4. Select the setting you want to adjust.
   - Full Auto MCACC – See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48 for a quick and effective automatic surround receiver.
   - Auto MCACC – See Automatic MCACC (Expert) on page 93 for a more detailed MCACC setup.
   - Demo – No settings are saved and no errors occur. When the speakers are connected to this receiver, the test tone is output repeatedly. Press RETURN to cancel the test tone.

**Automatic MCACC (Expert)**

If your setup requires more detailed settings than those provided in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48, you can customize your setup options below. You can calibrate your system differently for up to six different MCACC presets, which are useful if you have different listening positions depending on the type of source (for example, watching movies from a sofa, or playing a video game close to the TV).

**Important**
- Make sure the microphone/speakers are not moved during the Auto MCACC Setup.
- The screen saver will automatically appear after five minutes of inactivity.

**CAUTION**
- The test tones used in the Auto MCACC Setup are output at high volume.

1 Select ‘Auto MCACC’ from the MCACC PRO menu, then press ENTER.
   If the MCACC PRO screen is not displayed, refer to Making receiver settings from the MCACC PRO menu on page 93.

2 Select the parameters you want to set.
   Use \( \uparrow/\downarrow/\leftarrow/\rightarrow/\) to select the item, then use \( \leftrightarrow/\) to set.
   - **Auto MCACC** – The default is **ALL** (recommended), but you can limit the system calibration to only one setting (to save time) if you want.
     - When data measurement is taken (after selecting **ALL** or **Keep SP System**), the reverberation characteristics data (both before- and after-calibration) that this receiver had been storing will be overwritten.
     - When measurement is performed with other than **SYMMETRY** (after selecting **ALL** or **Keep SP System**), the reverberation characteristics after calibration cannot be displayed. If you will need to display the graph for the characteristics after calibration (“After”), take the measurement using the **EQ Professional** menu in the Manual MCACC setup.
     - The **EQ Pro & S-Wave** measurement is also taken when **ALL** or **Keep SP System** is selected. See Acoustic Calibration EQ Professional on page 96 for more on this.
   - **Either effect of Acoustic Calibration EQ Professional and Standing Wave can be switched on and off in the respective MCACC preset. For details, see Setting the Audio options on page 17.**
   - **EQ Type** (only available when the Auto MCACC Menu above is EQ Pro & S-Wave) – This determines how the frequency balance is adjusted.
     - **SYM** (symmetry correction) for each pair of left and right speakers to flatten the frequency-amplitude characteristics.
     - **ALL** – A ‘flat’ setting where all the speakers are set individually so no special weighting is given to any one channel.
     - **FRONT ALIGN** sets all speakers in accordance with the front speaker settings (no equalization is applied to the front left and right channels).

If you selected **ALL** or **Keep SP System** as your **Auto MCACC** menu, you can specify the MCACC preset where you want to save the **SYM**. **ALL CH ADJ** and **FRONT ALIGN** settings.

EO of subwoofer is automatically set when in **ALL CH ADJ** mode.

- **STAND.WAVE Multi-Point** (only available when the Auto MCACC Menu above is EQ Pro & S-Wave) – In addition to measurements at the listening position, you can use two more reference points for which test tones will be analyzed for standing waves. This is useful if you want to get a balanced ‘flat’ calibration for several seating positions in your listening area. Place the microphone at the reference point indicated on-screen and note that the last microphone placement will be at your main listening position.

- **Dolby Enabled Speaker** (it can be set only when **ALL** and **Speaker Setting** are selected for **Auto MCACC**) – Select speakers that use Dolby Enabled Speaker (TFw+TBw, TFw, TMd, TBw). When Dolby Enabled Speaker is not used, select **NO** (page 23).

- **SP to ceiling** (it can be set only when Dolby Enabled Speaker is used and **ALL**, **Keep SP System** and **Channel Level & Speaker Distance** are selected for **Auto MCACC**) – When Dolby Enabled Speaker is used, enter the height from the speaker to the ceiling (page 23).
3 Connect the microphone to the MCACC SETUP MIC jack on the front panel.
Make sure there are no obstacles between the speakers and the microphone.

If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.

- It may not be possible to measure correctly if the microphone is placed on a table, sofa, etc.

4 When you’re finished setting the options, select START then press ENTER.

5 Follow the instructions on-screen.

6 Wait for the Auto MCACC Setup to finish outputting test tones.
A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while this is happening.

- With error messages (such as Too much ambient noise! or Check microphone.), select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup on page 49) and verifying the microphone connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.
- Do not adjust the volume during the test tones. This may result in incorrect speaker settings.

7 If necessary, confirm the speaker configuration in the GUI screen.
The configuration shown on-screen should reflect the actual speakers you have.
If no operations are performed for 10 seconds while the speaker configuration check screen is being displayed, the Auto MCACC Setup will resume automatically. In this case, you don’t need to select OK and press ENTER in step 8.

- If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑/↓ to select the speaker and ←/→ to change the setting and continue.
- If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.
If Reverse Phase is displayed, the speaker’s wiring (+ and −) may be inverted. Check the speaker connections.
- If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly. After this, perform the Auto MCACC procedure again.
- If the connections were right, select GO NEXT and continue.

8 Make sure ‘OK’ is selected, then press ENTER.
A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings.
Again, try to be as quiet as possible while this is happening. It may take 3 to 7 minutes.

- If you selected a STAND.WAVE Multi-Point setup (in step 2), you will be asked to place the mic at the 2nd and 3rd reference points before finally placing it at your main listening position.

9 The Auto MCACC Setup procedure is completed and the MCACC PRO menu reappears automatically.
The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the Manual MCACC setup menu (starting below) or Manual SP Setup menu (starting on page 101).

- Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 101.
- The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.
- If Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.
You can also choose to view the settings by selecting individual parameters from the MCACC Data Check screen (see Checking MCACC Data for Auto MCACC Setup on page 97). Press RETURN after you have finished checking each screen. When you’re finished, select RETURN to go back to the HOME MENU.

Be sure to disconnect the microphone from this receiver upon completion of the Auto MCACC Setup.
Manual MCACC setup
You can use the settings in the Manual MCACC setup menu to make detailed adjustments when you’re more familiar with the system. Before making these settings, you should have already completed Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

CAUTION
- The test tones used in the Manual MCACC setup are output at high volume.

Important
- Press the MCACC button while the pertinent setup screens are displayed to select MCACC presets.
- For some of the settings below, you’ll have to connect the setup microphone to the front panel and place it about ear level at your normal listening position. Press HOME MENU to display the HOME MENU before you connect the microphone to this receiver.
- See Problems when using the Auto MCACC Setup on page 49 for notes regarding high background noise levels and other possible interference.
- If you’re using a subwoofer, switch it on and turn up the volume to the middle position.

1 Select ‘Manual MCACC’ from the MCACC PRO menu.
See Making receiver settings from the MCACC-PRO menu on page 93 if you’re not already at this screen.

2 Select the setting you want to adjust.
If you’re doing this for the first time, you might want to make these settings in order.
- Fine Channel Level – Make fine adjustments to the overall balance of your speaker system (see Fine Channel Level on page 93).
- Fine SP Distance – Make precise delay settings for your speaker system (see Fine Speaker Distance on page 95).
- Standing Wave – Control overly resonant low frequencies in your listening room (see Standing Wave on page 96).

The last two settings are specifically for customizing the parameters explained in Acoustic Calibration EQ Adjust on page 96.
- EQ Adjust – Manually adjust the frequency balance of your speaker system while listening to test tones (see Acoustic Calibration EQ Adjust on page 96).
- EQ Professional – Calibrate your system based on the direct sound coming from the speakers and make detailed settings according to your room’s reverb characteristics (see Acoustic Calibration EQ Professional on page 96).

Fine Channel Level
- Default setting: 0.0dB (all channels)
You can achieve better surround sound by properly adjusting the overall balance of your speaker system. You can adjust the Channel Level of each speaker in 0.5 dB increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 101.

1 Select ‘Fine Channel Level’ from the Manual MCACC setup menu.
The volume increases to the 0.0 dB reference level.

2 Adjust the level of the left channel.
This will be the reference speaker level, so you may want to keep the level around 0.0dB so that you’ll have plenty of room to adjust the other speaker levels.
- After pressing ENTER, test tones will be output.

3 Select each channel in turn and adjust the levels (+/-12.0 dB) as necessary.
Use ←/→ to adjust the volume of the speaker you selected to match the reference speaker. When it sounds like both tones are the same volume, press ↓ to confirm and continue to the next channel.
- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use ↑/↓ to select it.

4 When you’re finished, press RETURN.
You will return to the Manual MCACC setup menu.

Fine Speaker Distance
- Default setting: 3.00 m (all speakers)
For proper sound depth and separation with your system, it is necessary to add a slight bit of delay to some speakers so that all sounds will arrive at the listening position at the same time. You can adjust the distance of each speaker in 1 cm increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 101.

1 Select ‘Fine SP Distance’ from the Manual MCACC setup menu.

2 Adjust the distance of the left channel from the listening position.
When Dolby Enabled Speaker is set, enter the distance from the speakers to the ceiling and from the listening position to each Dolby Enabled Speakers (page 23).

3 Select each channel in turn and adjust the distance as necessary.
Use ←/→ to adjust the delay of the speaker you selected to match the reference speaker. (If Dolby Enabled Speaker is used, the distance reached by the speaker sound reflected at the ceiling is displayed (page 23.).)
Listen to the reference speaker and use it to measure the target channel. From the listening position, face the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span.
- If you can’t seem to achieve this by adjusting the distance setting, you may need to change the angle of your speakers very slightly.
- The subwoofer’s test tone differs in tone from other channels. Adjust so that the sound of the subwoofer can be heard distinctly. Note that when adjusting the subwoofer, depending on the low frequency response of your speaker, it may be difficult to hear the change even when the setting is increased or decreased or when the position of the speaker is changed. Note that it may be difficult to compare this tone with the other speakers in your setup (depending on the low frequency response of the reference speaker).

When it sounds like the delay settings are matched up, press ↓ to confirm and continue to the next channel.
- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use ↑/↓ to select it.

4 When you’re finished, press RETURN.
You will return to the Manual MCACC setup menu.
**Acoustic Calibration EQ Professional**

This setup minimizes the unwanted effects of room reverberation by allowing you to calibrate your system based on the direct sound coming from the speakers. Performing the Acoustic Calibration EQ Professional procedure is effective when the lower frequencies seem overly reverberant in your listening room (i.e., it sounds ‘boomy’) as shown at Type A below, or when different channels seem to exhibit different reverb characteristics as shown at Type B.

- **Type A: Reverberance of high vs. low frequencies**
- **Type B: Reverb characteristics for different channels**

**Using Acoustic Calibration EQ Professional**

1. Select ‘EQ Professional’, then press ENTER.
2. Select an option and press ENTER.
   - **Reverb Measurement** – Use this to measure the reverb characteristics before and after calibration.
   - **Reverb View** – You can check the reverb measurements made for specified frequency ranges in each channel. Depending on the reverble characteristics, the reverberations are measured with the standing waves controlled, so the reverb characteristics graph shows the characteristics with the effect of the standing waves eliminated. By contrast, the Reverb Measurement function measures the reverberations without controlling the standing waves. If you wish to check the reverb characteristics of the room itself (with the standing waves as such), we recommend using the Reverb Measurement function.
   - **Advanced EQ Setup** – Use this to select the time period that will be used for frequency adjustment and calibration, based on the reverb measurement of your listening area. Note that customizing system calibration using this setup will alter the settings you made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48 or Automatic MCACC (Expert) on page 93 and is not necessary if you're satisfied with these settings.

**Standing Wave**

- **Default setting:** ON/ATT 0.0dB (all filters)
  - Acoustic standing waves occur when, under certain conditions, sound waves from your speaker system resonate mutually with sound waves reflected off the walls in your listening area. This can have a negative effect on the overall sound, especially at certain lower frequencies. Depending on speaker placement, your listening position, and ultimately the shape of your room, it results in an overly resonant (‘boomy’) sound. The Standing Wave Control uses filters to reduce the effect of overly resonant sounds in your listening area. During playback of a source, you can customize the filters used for Standing Wave Control for each of your MCACC presets.
- **Standing Wave control filter settings cannot be changed during playback of sources using the HDMI connection.**

2. Adjust the parameters for the Standing Wave Control.
   - **Filter Channel** – Select the channel to which you will apply the filter(s): MAIN (all except center channel and subwoofer), Center or SW (subwoofer).
   - **TRIM** (only available when the filter channel above is SW) – Adjust the subwoofer channel level (to compensate for the difference in output post-filter).
   - **FREQ / Q / ATT** – These are the filter parameters where Freq represents the frequency you will be targeting and Q is the bandwidth (the higher the Q, the narrower the bandwidth, or range) of the attenuation (ATT, the amount of reduction to the targeted frequency).
3. When you’re finished, press RETURN.
   - You will return to the Manual MCACC setup menu.

**Acoustic Calibration EQ Adjust**

- **Default setting:** ON/0.0dB (all channels/bands)
  - Acoustic Calibration Equalization is a kind of room equalizer for your speakers (excluding the subwoofer). It works by measuring the acoustic characteristics of your room and neutralizing the ambient characteristics that can color the original source material (providing a ‘flat’ equalization setting). If you’re not satisfied with the settings provided in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48 or Automatic MCACC (Expert) on page 93, you can also adjust these settings manually to get a frequency balance that suits your tastes.

2. Select the channel(s) you want and adjust to your liking.
   - Use ‹ / › to select the channel.
   - Use ‹ / › to select the frequency and ‹ / › to boost or cut the EQ. When you’re finished, go back to the top of the screen and press ‹ to return to Ch, then use ‹ / › to select the channel.
   - The OVER! indicator shows in the display if the frequency adjustment is too drastic and might distort. If this happens, bring the level down until OVER! disappears from the display.
3. When you’re finished, press RETURN.
   - You will return to the Manual MCACC setup menu.

**Notes**

- Changing the frequency curve of one channel too drastically will affect the overall balance. If the speaker balance seems uneven, you can raise or lower channel levels using test tones with the TRIM feature. Use ‹ / › to select TRIM, then use ‹ / › to raise or lower the channel level for the current speaker.
- You cannot select 63Hz for the channel, which is set to SMALL using Speaker Setting.
- The frequencies that can be adjusted by the SW channel are 31Hz, 63Hz, 125Hz and 250Hz.
- Depending on the crossover frequency setting, some frequencies are less effective.
3 If you selected ‘Reverb Measurement’, select EQ ON or EQ OFF, and then START. The following options determine how the reverb characteristics of your listening area are displayed in Reverb View:
- **EQ OFF** – You will see the reverb characteristics of your listening area without the equalization performed by this receiver (before calibration).
- **EQ ON** – You will see the reverb characteristics of your listening area with the equalization performed by this receiver (after calibration). Note that the EQ response may not appear entirely flat due to adjustments necessary for your listening area.

   The calibration corresponding to the currently selected MCACC preset will be used when EQ ON is selected. To use another MCACC preset, press MCACC to select the MCACC memory you want to store.
   — After auto calibration with **EQ Type**: SYMMETRY (Auto MCACC, etc.), the graph for the inferred reverb characteristics can be displayed by selecting **Reverb View**. To display the actually measured reverb characteristics after EQ calibration, measure with EQ ON.

   When the reverb measurement is finished, you can select **Reverb View** to see the results on-screen. See **Professional Calibration EQ graphical output** on page 114 for troubleshooting information.

4 If you selected ‘Reverb View’, you can check the reverb characteristics for each channel. Press RETURN when you’re done.

   The reverb characteristics are displayed when the **Reverb Measurement** measurements are conducted. Use †/ ‡ to select the channel, frequency and calibration setting you want to check. Use †/ ‡ to go back and forth between the three. The reverb characteristics graph before and after EQ calibration can be displayed by selecting **Calibration** : Before / After. Note that the markers on the vertical axis indicate decibels in 2 dB steps.

5 If ‘Advanced EQ Setup’ is selected, select the MCACC memory to be stored, then enter the desired time setting for calibration, and then select **START**.

   - To specify the place where the MCACC memory is to be stored, press MCACC to select the MCACC memory you want to store.
   
   Based on the reverb measurement above, you can choose the time period that will be used for the final frequency adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use the measurement results as a reference for your time setting. For an optimal system calibration based on the measurement results, you can choose the time period that will be used for the final frequency adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use the measurement results as a reference for your time setting.

   Press RETURN to go back to the MCACC Data Check menu, repeating steps 2 and 3 to check other settings.

5 When you’re finished, press RETURN. You will return to the **HOME MENU**.

### Checking MCACC Data

At the procedure of Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48, the procedure of Automatic MCACC (Expert) on page 93 or after fine-adjusting at Manual MCACC setup on page 95, you can check your calibrated settings using the GUI screen.

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

   A Graphical User Interface (GUI) screen appears on your TV. Use †/ ‡/ ††† ††† ††† and ENTER to navigate through the menus and select menu items. Press RETURN to exit the current menu.

2 Select ‘MCACC Data Check’ from the HOME MENU.

3 Select the setting you want to check.
   - **Speaker Setting** – Used to check the settings of the speaker systems. See **Speaker Setting** on page 91 for more on this.
   - **Channel Level** – Used to check the output level of the different speakers. See **Channel Level** on page 97 for more on this.
   - **Standing Wave** – Used to check the reverb characteristics of your listening area. See **Standing Wave** on page 98 for more on this.
   - **Acoustic Cal EQ** – Used to check the reverb characteristics of your listening area. See **Acoustic Cal EQ** on page 98 for more on this.
   - **Group Delay** – Used to check the speakers’ group delay (both before and after calibration). See **Group Delay** on page 98 for more on this.

4 Press RETURN to go back to the MCACC Data Check menu, repeating steps 2 and 3 to check other settings.

5 When you’re finished, press RETURN.

   You will return to the **HOME MENU**.

### Speaker Setting

Use this to display the speaker size and number of speakers. See **Speaker Setting** on page 102 for more on this.

1 Select ‘Speaker Setting’ from the MCACC Data Check menu.

2 Select the channel you want to check.

   Use †/ ‡ to select the channel. The corresponding channel on the layout diagram is highlighted.

### Channel Level

Use this to display the level of the various channels. See **Channel Level** on page 103 for more on this.

1 Select ‘Channel Level’ from the MCACC Data Check menu.

2 When ‘MCACC’ is highlighted, use †/ ‡ to select the MCACC preset you want to check. The level of the various channels set at the selected MCACC preset is displayed. --- is displayed for channels that are not connected.
Speaker Distance
Use this to display the distance from the different channels to the listening position. See Speaker Distance on page 103 for more on this.

1 Select ‘Speaker Distance’ from the MCACC Data Check menu.
2 When ‘MCACC’ is highlighted, use ↑/↓ to select the MCACC preset you want to check.
The distance from the various channels set at the selected MCACC preset is displayed. ‘---’ is displayed for channels that are not connected.

Standing Wave
Use this to display the standing wave related adjustment values for the various MCACC memories. See Standing Wave on page 96 for more on this.

1 Select ‘Standing Wave’ from the MCACC Data Check menu.
2 When ‘Filter Channel’ is highlighted, use ↑/↓ to select the channel for which you want to check standing wave control.
The standing wave related calibration value for the selected channel stored at the selected MCACC preset and its graph are displayed.
3 Press ← to highlight ‘MCACC’, then use ↑/↓ to select the MCACC preset you want to check.

Acoustic Cal EQ
Use this to display the calibration values for the frequency response of the various channels set in the different MCACC presets. See Acoustic Calibration EQ Adjust on page 98 for more on this.

1 Select ‘Acoustic Cal EQ’ from the MCACC Data Check menu.
2 When ‘Ch’ is highlighted, use ↑/↓ to select the channel.
The calibration value for the frequency response of the selected channel stored at the selected MCACC preset and its graph are displayed.
3 Press ← to highlight ‘MCACC’, then use ↑/↓ to select the MCACC preset you want to check.

Group Delay
Use this to display the calibrated speaker group delay results. See Better sound using Phase Control and Full Band Phase Control on page 65 for more on this.

1 Select ‘Group Delay’ from the MCACC Data Check menu.
2 When ‘Channel’ is highlighted, use ←/→ to select the channel you want to check.
The result of group delay calibration for the selected channel is displayed. When measurements have been performed with Full Auto MCACC selected at MCACC PRO or with ALL or Full Band Phase Ctrl selected when Auto MCACC is selected, the graph before group delay calibration is also displayed. When After is selected at Calibration, the group delay after calibration is displayed. Compared to when Before is selected, with After there is less difference in the delay between frequency bands and the group delay between the different channels is uniform, allowing you to check the full band phase control effect.

Data Management
This system allows you to store up to six MCACC presets, allowing you to calibrate your system for different listening positions (or frequency adjustments for the same listening position). This is useful for alternate settings to match the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2 Select ‘Data Management’ from the HOME MENU.
3 Select the setting you want to adjust.

- Memory Rename – Name your MCACC presets for easy identification (see Renaming MCACC presets on page 98).
- MCACC Memory Copy – Copy settings from one MCACC preset to another (see Copying MCACC preset data on page 99).
- MCACC Memory Clear – Clear any MCACC presets that you don’t want (see Clearing MCACC presets on page 99).

Renaming MCACC presets
If you have several different MCACC presets that you’re using, you may want to rename them for easier identification.

1 Select ‘Memory Rename’ from the Data Management setup menu.
2 Select the MCACC preset you want to rename, then select an appropriate preset name. Use ↑/↓ to select the preset, then ←/→ to select a preset name.
3 Repeat for as many MCACC presets as necessary, then press RETURN when you’re finished.
You will return to the Data Management setup menu.
Copying MCACC preset data
If you want to manually adjust the Acoustic Calibration EQ (see Manual MCACC setup on page 95), we recommend copying your current settings to an unused MCACC preset. Instead of just a flat EQ curve, this will give you a reference point from which to start.

- The settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48 or Automatic MCACC (Expert) on page 93.

1. Select ‘MCACC Memory Copy’ from the Data Management setup menu.
2. Select the setting you want to copy.
   - All Data – Copies all the settings of the selected MCACC preset memory.
   - Level & Distance – Copies only the channel level and speaker distance settings of the selected MCACC preset memory.
3. Select the MCACC preset you’ll be copying the settings ‘From’, then specify where you want to copy them ‘To’.
   Make sure you don’t overwrite an MCACC preset you’re currently using (this can’t be undone).
4. Select ‘OK’ to confirm and copy the settings.
   When MCACC Memory Copy? is displayed, select YES. If NO is selected, the memory is not copied.
Completed! shows in the GUI screen to confirm the MCACC preset has been copied, then you automatically return to the Data Management setup menu.

Clearing MCACC presets
If you are no longer using one of the MCACC presets stored in memory, you can choose to clear the calibration settings of that preset.

1. Select ‘MCACC Memory Clear’ from the Data Management setup menu.
2. Select the MCACC preset you want to clear.
   Make sure you don’t clear an MCACC preset you’re currently using (this can’t be undone).
3. Select ‘OK’ to confirm and clear the preset.
   When MCACC Memory Clear? is displayed, select YES. If NO is selected, the memory is not cleared.
Completed! shows in the GUI screen to confirm the MCACC preset has been cleared, then you automatically return to the Data Management setup menu.

Making receiver settings from the System Setup menu

The following section describes how to change the speaker-related settings manually and make various other settings (input selection, OSD language selection, etc.).

• With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. You can change where the screen is output in the MAIN/HDZONE (page 107) and HDMI output (page 82) settings.

1 Press STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.

2 Press MAIN RECEIVER to switch to the remote control for the receiver and your TV. Then press HOME MENU.

2 Press HOME MENU at any time to exit the HOME MENU.

3 Select ‘System Setup’ from the HOME MENU, then press ENTER.

4 Select the setting you want to adjust.

• Manual SP Setup – Sets the type of connection used for surround back terminals and the size, number distance and overall balance of the connected speakers (see Manual speaker setup on page 101).
• Input Setup – Specifies what you’ve connected to the digital, HDMI and component video inputs (see The Input Setup menu on page 50).
• OSD Language – The GUI screen’s display language can be changed (see Changing the OSD display language (OSD Language) on page 51).
• Network Setup – Conducts the setup necessary to connect this unit to the network (see Network Setup menu on page 105).
• HDMI Setup – Synchronizes this receiver with your Pioneer component supporting Control with HDMI (page 70).
• MHL Setup – Changes the settings related to MHL (see MHL Setup on page 106).
• Other Setup – Makes customized settings to reflect how you are using the receiver (see The Other Setup menu on page 100).

Manual speaker setup

This receiver allows you to make detailed settings to optimize the surround sound performance. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

These settings are designed to customize your system, but if you’re satisfied with the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48, it isn’t necessary to make all of these settings.

CAUTION

• The test tones used in the Manual SP Setup are output at high volume.

1 Select ‘Manual SP Setup’, then press ENTER.

See Making receiver settings from the System Setup menu on page 101 if you’re not already at this screen.

2 Select the setting you want to adjust.

If you are doing this for the first time, you may want to adjust these settings in order:

• Speaker System – Specifies how you are using your surround back speaker terminals and B speaker terminals (page 103).
• Speaker Setting – Specifies the size and number of speakers you’ve connected (page 109).
• Channel Level – Adjusts the overall balance of your speaker system (page 103).
• Speaker Distance – Specifies the distance of your speakers from the listening position (page 102).
• X-Curve – Adjusts the tonal balance of your speaker system for movie soundtracks (page 103).

3 Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Speaker system setting

• Default setting: 7.2.2ch TMD/FW

There are several ways you can use the speaker terminals with this receiver. In addition to a normal home theater setup where they are used for the top middle speakers or front wide speakers, they can be used for bi-amping the front speakers or as an independent speaker system in another room.

1 Select ‘Speaker System’ from the Manual SP Setup menu.

See Making receiver settings from the System Setup menu on page 101 if you’re not already at this screen.

2 Select the speaker system setting.

• 7.2.2ch TMD/FW – Select for normal home theater use with top middle and front wide speakers in your main (speaker system A) setup.
• 7.2.2ch TMD/FH – Select for normal home theater use with top middle and front height speakers in your main (speaker system A) setup.
• 5.2.4ch – Select for normal home theater use with top forward and top backward speakers in your main (speaker system A) setup.
• 7.2.4ch – Select for normal home theater use with top middle and center speakers in your main (speaker system A) setup.
• 7.2.4ch + HDZONE – Select for normal home theater use with top middle and front wide speakers in your main (speaker system A) setup.
• 5.2.4ch + HDZONE – Select for normal home theater use with top middle and center speakers in your main (speaker system A) setup.
• 7.2.4ch + SP-B Bi-Amp – Select this setting if you’re bi-amping your B speakers (see Bi-amping your speakers on page 25).
• 7.2.4ch + HDZONE – Select this setting if you’re bi-amping your B speakers (see Bi-amping your speakers on page 25).
• 7.2.2ch + HDZONE – Select to use the front wide speaker terminals for an independent system in another zone (see Using the MULTI-ZONE controls on page 83).
• 5.2 Bi-Amp+HDZONE – Select to use the surround back speaker terminals for an independent system in another zone (see Using the MULTI-ZONE controls on page 83).
• 5.2 + ZONE 2+ZONE 3 – Select to use the surround back (ZONE 2) and front wide (ZONE 3) speaker terminals for an independent systems in another zone (see Using the MULTI-ZONE controls on page 83).
• 5.2 + ZONE 2+HDZONE – Select to use the surround back speaker terminals for an independent system in another zone (see Using the MULTI-ZONE controls on page 83).
• 5.2 ch + SP-B Bi-Amp – Select this setting if you’re bi-amping your B speakers (see Bi-amping your speakers on page 25).
• 5.2ch + SP-B Bi-Amp – Select this setting if you’re bi-amping your B speakers (see Bi-amping your speakers on page 25).
• 5.2ch F+Surr Bi-Amp – Select this setting if you’re bi-amping your front and surround speakers (see Bi-amping your speakers on page 25).
• 5.2ch F+SP-B Bi-Amp – Select this setting if you’re bi-amping your front and surround speakers (see Bi-amping your speakers on page 25).
• 5.2ch F+C+SP-B Bi-Amp – Select this setting if you’re bi-amping your front and center speakers (see Bi-amping your speakers on page 25).
• 5.2ch C+Surr Bi-Amp – Select this setting if you’re bi-amping your center and surround speakers (seeBi-amping your speakers on page 25).
• Multi-ZONE Music – See Using Multi-ZONE Music on page 105.

3 If you selected 7.2.2ch TMD/FW, 7.2.2ch TMD/FH, 7.2ch + Speaker B, 7.2ch + Front Bi-Amp, or 7.2ch + HDZONE in Step 2, select the placement of the surround speakers.

In a 7.2-channel surround system with surround speakers placed directly at the sides of the listening position, the surround sound of 5.1-channel sources is heard from the side. This function mixes the sound of the surround speakers with the surround back speakers so that the surround sound is heard from diagonally to the rear as it should be.
Depending on the positions of the speakers and the sound source, in some cases it may not be possible to achieve good results. In this case, set the setting to ON SIDE or IN REAR.

- **ON SIDE** – Select when the surround speakers is positioned right beside you.
- **IN REAR** – Select when the surround speaker is positioned obliquely behind you.

4 When 'Setting Change?' is displayed, select Yes.

If No is selected, the setting is not changed. You will return to the Manual SP Setup menu.

Using Multi-ZONE Music

Multi-ZONE Music can be used to play the same sound in the MAIN ZONE, ZONE 2 and ZONE 3, for example for home parties. Normally set Speaker System to 5.2 + ZONE 2 + ZONE 3 for multi-zone/multi-source playback, then switch it to Multi-ZONE Music when having a home party. When this is done, the sound of the input function selected for the MAIN ZONE is played in all zones (the MAIN ZONE, ZONE 2 and ZONE 3).

- There is virtually no delay in the sound.
- Switching of the input for only ZONE 2 or ZONE 3 is disabled, but the volume can be adjusted or muted for the individual zones.
- This is only valid for ZONE 2 and ZONE 3 connections using the speaker terminals. No sound is output from the ZONE 2 and ZONE 3 pre-out terminals. Nothing is output from the ZONE 2 and ZONE 3 COMPONENT VIDEO output and VIDEO output terminals.
- The HDZONE setting does not apply to Multi-ZONE Music.

Speaker Setting

Use this setting to specify your speaker configuration (size, number of speakers and crossover frequency). It is a good idea to make sure that the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48 are correct. Note that this setting applies to all MCACC presets, and cannot be set independently.

1 Select 'Speaker Setting' from the Manual SP Setup menu.

2 Choose the set of speakers that you want to set, then select a speaker size.

Use (/><) to select the size (and number) of each of the following speakers:

- **Front** – Select LARGE if your front speakers reproduce bass frequencies effectively, or if you didn’t connect a subwoofer. Select SMALL to send the bass frequencies to the subwoofer.
- **Center** – Select LARGE if your center speaker reproduces bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a center speaker, choose NO (the center channel is sent to the front speakers).
- **TMd** – Select LARGE if your top middle speakers reproduce bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. When Dolby Enabled Speaker is used, select Dolby Sp (page 9). If you didn’t connect the top middle speakers, choose NO (the top middle channel is sent to the front speakers).
- **FW** – Select LARGE if your front wide speakers reproduce bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. When Dolby Enabled Speaker is used, select Dolby Sp (page 23). If you didn’t connect the top forward speakers, choose NO (the top forward channel is sent to the front speakers).
- **Center back** – Select LARGE if your center speakers reproduce bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. When Dolby Enabled Speaker is used, select Dolby Sp (page 23). If you didn’t connect the top forward speakers, choose NO (the top forward channel is sent to the front speakers).

3 When you set the Speaker Distance setting, select YES.

- The value of the Speaker Distance setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are also routed to the subwoofer). If you did not connect a subwoofer choose NO (the bass frequencies are output from other speakers).
- If you have a subwoofer and like lots of bass, it may seem logical to select LARGE for your front speakers and PLUS for the subwoofer. This may not, however, yield the best bass results. Depending on the speaker placement of your room you may actually experience a decrease in the amount of bass due low frequency cancellations. In this case, try changing the position or direction of speakers. If you can’t get good results, listen to the bass response with it set to PLUS and YES or the front speakers set to LARGE and SMALL alternatively and let your ears judge which sounds best. If you’re having problems, the easiest option is to route all the bass sounds to the subwoofer by selecting SMALL for the front speakers.
If you select NO for the subwoofer the front speakers will automatically be fixed to LARGE. Also, the center, surround, surround back, front height and front wide speakers can't be set to LARGE if the front speakers are set to SMALL. In this case, all bass frequencies are sent to the subwoofer.

3. **Select X.OVER and set the crossover frequency.**
   Frequencies below this point will be sent to the subwoofer (or LARGE speakers).
   - This setting decides the cutoff between bass sounds playing back from the speakers selected as LARGE, or the subwoofer, and bass sounds playing back from those selected as SMALL. It also decides where the cutoff will be for bass sounds in the LFE channel.
   - With Full Auto MCACC setup or Auto MCACC setup (ALL or Speaker Setting), the setting here will not apply and the crossover frequency will be automatically set. Crossover frequency is a frequency aimed at achieving the optimal sound field taking into account the bass capacity of all connected speakers and human aural characteristics.

4. **When you're finished, press RETURN.**
   You will return to the Manual SP Setup menu.

**Channel Level**
Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1. **Select ‘Channel Level’ from the Manual SP Setup menu.**
   The test tones will start.

2. **Adjust the level of each channel using ‹‹/››.**
   Use ‹‹/›› to switch speakers.
   Adjust the level of each speaker as the test tone is emitted.
   - If you are using a Sound Pressure Level (SPL) meter, take the readings from your main listening position and adjust the level of each speaker to 75 dB SPL (C-weighting/slow reading).

3. **When you're finished, press RETURN.**
   You will return to the Manual SP Setup menu.

**Speaker Distance**
For good sound depth and separation from your system, you need to specify the distance of your speakers from the listening position. (When Dolby Enabled Speaker is used, specify the distance reached by the speaker sound reflected at the ceiling (page 23).) The receiver can then add the proper delay needed for effective surround sound.

1. **Select ‘Speaker Distance’ from the Manual SP Setup menu.**
2. **Adjust the distance of each speaker using ‹‹/››.**
   You can adjust the distance of each speaker in 0.01 m increments.

3. **When you're finished, press RETURN.**
   You will return to the Manual SP Setup menu.

**X-Curve**
Most soundtracks mixed for cinema sound too bright when played back in large rooms. The X-Curve setting acts as a kind of re-equalization for home theater listening, and restores proper tonal balance of movie soundtracks.

1. **Select ‘X-Curve’ from the Manual SP Setup menu.**
2. **Choose the X-Curve setting you want.**
   Use ‹‹/›› to adjust the setting. The X-Curve is expressed as a downwards slope in decibels per octave, starting at 2 kHz. The sound becomes less bright as the slope increases (to a maximum of −3.0dB/oct).

<table>
<thead>
<tr>
<th>Room size (m²)</th>
<th>X-Curve (dB/oct)</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤36</td>
<td>−0.5</td>
</tr>
<tr>
<td>36–48</td>
<td>−1.0</td>
</tr>
<tr>
<td>48–60</td>
<td>−1.5</td>
</tr>
<tr>
<td>60–72</td>
<td>−2.0</td>
</tr>
<tr>
<td>72–300</td>
<td>−2.5</td>
</tr>
<tr>
<td>300–1000</td>
<td>−3.0</td>
</tr>
</tbody>
</table>

   - If you select OFF, the frequency curve will be flat and the X-Curve has no effect.

3. **When you're finished, press RETURN.**

**Network Setup menu**
Make the settings for connecting the receiver to the Internet and using the network functions.

1. **Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.**
   A Graphical User Interface (GUI) screen appears on your TV. Use ‹‹/››/‖/‖ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2. **Select ‘System Setup’ from the HOME MENU.**
3. **Select ‘Network Setup’ from the System Setup menu.**
4. **Select the setting you want to adjust.**
   If you are doing this for the first time, you may want to adjust these settings in order:
   - IP Address, Proxy – Sets up the IP address/Proxy of this receiver (page 103).
   - Network Standby – Even when the unit is in standby mode, it is possible to turn on the power of the unit from iControlAVS (page 104).
   - Friendly Name – The name of the receiver displayed on a computer or other device connected to the network can be changed (page 104).
   - Parental Lock – Restricts usage of network functions (page 104).
   - Port Number Setting – Sets the numbers of the ports where signals from IP Control are received (page 104).

**IP address/Proxy setting**
In case the router connected to the LAN terminal on this receiver is a broadband router (with a built-in DHCP server function), simply turn on the DHCP server function, and you will not need to set up the network manually. You must set up the network as described below only when you have connected this receiver to a broadband router without a DHCP server function. Before you set up the network, consult with your ISP or the network manager for the required settings. It is advised that you also refer to the operation manual supplied with your network component.
   - In case you make changes to the network configuration without the DHCP server function, make the corresponding changes to the network settings of this receiver.
IP Address
The IP address to be entered must be defined within the following ranges. If the IP address defined is beyond the following ranges, you cannot play back audio files stored on components on the network or listen to Internet radio stations.
Class A: 10.0.0.1 to 10.255.255.254
Class B: 172.16.0.1 to 172.31.255.254
Class C: 192.168.0.1 to 192.168.255.254

Subnet Mask
In case an xDSL modem or a terminal adapter is directly connected to this receiver, enter the subnet mask provided by your ISP on paper. In most cases, enter 255.255.255.0.

Default Gateway
In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

Primary DNS Server/Secondary DNS Server
In case there is only one DNS server address provided by your ISP on paper, enter it in the Primary DNS Server field. In case there are more than two DNS server addresses, enter Secondary DNS Server in the other DNS server address field.

Proxy Hostname/Proxy Port
This setting allows you to connect to Internet via a proxy server. Enter the IP address of your proxy server in the Proxy Hostname field. Also, enter the port number of your proxy server in the Proxy Port field.

Network Standby
Set so that the iControlAV5 function connected to the same LAN with the receiver can be used even while the unit is in standby status.
1. Select ‘Network Standby’ from the Network Setup menu.
2. Specify whether the Network Standby is ON or OFF.
   - ON – Even when the unit is in standby mode, it is possible to turn on the power of the unit from the device iControlAV5 that is connected to the network.
   - OFF – The iControlAV5 function is not available while the receiver is in standby mode (power consumption during standby can be suppressed).

Friendly Name
1. Select ‘Friendly Name’ from the Network Setup menu.
2. Select ‘Edit Name’ then select ‘Rename’.
3. Input the name you want.
   Use ↑/↓ to select a character, ←/→ to set the position, and ENTER to confirm your selection.

Parental Lock
Set restrictions for using Internet services. Also set the password accompanying the usage restrictions.
• Upon shipment from the factory, the password is set to “0000”.

Important
When the INTERNET RADIO or FAVORITES input is selected, the setting made here cannot be reflected.
1. Select ‘Parental Lock’ from the Network Setup menu.
2. Input the password.
   Use ↑/↓ to select a character, ←/→ to set the position, and ENTER to confirm your selection.
3. Specify whether to turn Parental Lock on or off.
   - OFF – Internet services are restricted.
   - ON – Internet services are restricted.
4. If you want to change the password, select Change Password.
   In this case, the procedure returns to step 2.

Port Number Setting
On this receiver, there can be up to 5 numbers of ports where signals are received.
1. Select ‘Port Number Setting’ from the Network Setup menu.
2. Select the port number you want to change.
3. Input the port number.
   • Use ↑/↓ to select a character, ←/→ to set the position, and ENTER to confirm your selection.
   • It is not possible to set the same port number more than once.
4. If there are other port numbers you want to change, repeat steps 2 and 3.

Note
We recommend setting the port number to 00023 or within the range of 49152 to 65535.
Checking the Network Information

The setting status of the following network-related items can be checked.

- IP Address – Check the IP address of this receiver.
- MAC Address – Check the MAC address of this receiver.
- Friendly Name – Friendly Name on page 104.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ← / → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘Network Information’ from the HOME MENU.
   Display the setting status of the network-related items.

MHL Setup

Select whether or not to switch the input automatically to the MHL input when an MHL-compatible device is connected.

- Default setting: ON

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ← / → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Press HOME MENU at any time to exit the HOME MENU.

3. Select ‘System Setup’ from the HOME MENU, then press ENTER.

4. Select ‘MHL Setup’ from the System Setup menu.

5. Use ← / → to select the setting.
   - OFF – Does not automatically switch to MHL input.
   - ON – Automatically switches to MHL input.

6. Select ‘OK’, then press ENTER.

Notes
- This is only valid for MHL-compatible devices supporting this function.
- When the power is on, the MHL-compatible device is charged. (This receiver supports charging of devices up to 0.9 A.)

The Other Setup menu

The Other Setup menu is where you can make customized settings to reflect how you are using the receiver.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ← / → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘System Setup’ from the HOME MENU.

3. Select ‘Other Setup’, then press ENTER.

4. Select the setting you want to adjust.
   If you are doing this for the first time, you may want to adjust these settings in order:
   - Auto Power Down – Sets the power to turn off automatically when the receiver is not being used (page 105).
   - Volume Setup – Sets up the volume-related operations of this receiver (page 106).
   - Remote Control Mode Setup – Sets this receiver’s remote control mode (page 106).
   - Software Update – Use to update the receiver’s software and check the version (page 106).
   - ZONE Setup – Use to make the sub zone-related settings (page 107).
   - On Screen Display Setup – Sets whether or not to display the status on the display when the receiver is operated (page 108).
   - Play ZONE Setup – Select the zone for playing the audio contents of devices in the home network (page 108).
   - Maintenance Mode – This is used to receive maintenance from a Pioneer service engineer or custom installer (page 108).

5. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Auto Power Down

The power can be set to turn off automatically if no operation has been performed for a specific amount of time with no audio or video signals being input to the receiver. When using ZONE 2, ZONE 3 or HDZONE, the ZONE 2, ZONE 3 or HDZONE power can also be set to turn off, but for ZONE 2, ZONE 3 or HDZONE the power turns off automatically after the amount of time set here even if signals are being input or operations have been performed.

Different times can be set for the main zone, ZONE 2, ZONE 3 and HDZONE.

1. Select ‘Auto Power Down’ from the Other Setup menu.

2. Select the zone you want to set and set the time after which the power turns off.
   - MAIN – The time can be selected from among “15 min”, “30 min”, “60 min” and “OFF”. The power turns off after there has been no signal and no operation for the selected time.
   - ZONE 2 – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.
   - ZONE 3 – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.
   - HDZONE – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.

Note
Depending on the connected devices, the Auto Power Down function may not work properly due to excessive noise or other reasons.
Volume Setup

You can set the maximum volume of this receiver or specify what the volume level will be when the power is turned on.

1 Select ‘Volume Setup’ from the Other Setup menu.
2 Select the Power ON Level setting you want.

The volume can be set so that it is always set to the same level when the receiver’s power is turned on.

- LAST (default) – When the power is turned on, the volume is set to the same level as when the power was last turned off.
- –∞ – When the power is turned on, the volume is set to minimum level.
- –80.0dB to +12.0dB – Specify the volume to be set when the power is turned on, in steps of 0.5 dB.

It is not possible to set a volume level greater than the value specified at Volume Limit setup (see below).

3 Select the Volume Limit setting you want.

Use this function to limit the maximum volume. The volume cannot be increased above the level set here, even by operating VOLUME button (or the dial on the front panel).

- OFF (default) – The maximum volume is not limited.
- –20.0dB to –15.0dB to –10.0dB to –5.0dB to 0.0dB – The maximum volume is limited to the value set here.

4 Select the Mute Level setting you want.

This sets how much the volume is to be turned down when MUTE is pressed.

- FULL (default) – No sound.
- –5.0dB to –40.0dB – The volume will be turned down to the level specified here.

5 When you’re finished, press RETURN.

You will return to the Other Setup menu.

Remote Control Mode Setup

- Default setting: 1

This sets this receiver’s remote control mode to prevent erroneous operation when multiple units of the receiver are being used.

1 Select ‘Remote Control Mode Setup’ from the Other Setup menu.
2 Select the Remote Control Mode setting you want.
3 Select ‘OK’ to change the remote control mode.
4 Follow the instructions on the screen to change the remote control’s setting.

See Operating multiple receivers on page 117.

5 When you’re finished, press RETURN.

You will return to the Other Setup menu.

Software Update

Use this procedure to update the receiver’s software and check the version. There are two ways to update: via the Internet and via a USB memory device.

Updating via the Internet is performed by accessing the file server from the receiver and downloading the file. This procedure is only possible if the receiver is connected to the Internet.

Updating via a USB memory device is performed by downloading the update file from a computer, reading this file onto a USB memory device then inserting this USB memory device into the USB port on the receiver’s front panel. With this procedure, the USB memory device containing the update file must first be inserted into the USB port on the receiver’s front panel.

- If an update file is provided on the Pioneer website, download it onto your computer. When downloading an update file from the Pioneer website onto your computer, the file will be in ZIP format. Unzip the ZIP file before saving it on the USB memory device. If there are any old downloaded files or downloaded files for other models on the USB memory device, delete them.

http://www.pioneer.com.sg (for Southeast Asia)
http://www.pioneer.com.au (for Australia)
http://www.pioneer-india.in (for India)
http://www.pioneerhongkong.com.hk (for Hong Kong)

- If an update file does not exist in the Pioneer’s website, updating the software for the receiver is not necessary.

Important

- DO NOT unplug the power cord during updating.
- When updating via the Internet, do not disconnect the LAN cable. When updating via a USB memory device, do not disconnect the USB memory device.
- If updating is interrupted before it is completed, start updating over from the beginning.
- The receiver’s settings may be reset when the software is updated. Information on the models for which the settings are reset is provided on the Pioneer website. Check the website before updating.

1 Select ‘Software Update’ from the Other Setup menu.
2 Select the update procedure.

- Update via Internet – The receiver checks whether updatable software is available via the Internet.
- Update via USB Memory – The receiver checks whether the USB memory device inserted into the USB port on the receiver’s front panel contains updatable software.

“Accessing” is displayed and the update file is checked. Wait a while.

3 Check on the screen whether or not an update file was found.

If ‘New version found.’ is displayed, the update file has been found. The version number and updating time are displayed.

If ‘This is the latest version. There is no need to update.’ is displayed, no update file has been found.

4 To update, select OK.

The updating screen appears and updating is performed.

- The power turns off automatically once updating is completed.

**ZONE Setup**

Switches the sub-zone setting.

**MAIN/HDZONE setting (setting for how to use the HDMI OUT 3 terminal)**

1. Select ‘ZONE Setup’ from the Other Setup menu.
2. Select ‘MAIN/HDZONE’, then press ENTER.
3. Set how the HDMI OUT 3 terminal is to be used.
   - **MAIN**: Select this to output the same input source as in the main zone. After setting this to **MAIN**, exit the home menu, then press OUT P, and select the terminal for HDMI output (page 82).
   - **HDZONE** (default): Use the HDMI output’s multizone function (HDZONE) to output an input source different from the one in the main zone (page 83).
4. Select ‘OK’, then press ENTER.

**ZONE 2/ZONE 3/HDZONE setting**

The volume setting and tone for the sub zones that can be used with this receiver can be changed and adjusted here.

- When making multi-zone connections using the AUDIO ZONE 2 OUT or AUDIO ZONE 3 OUT terminals and performing playback in Zone 2 or Zone 3, you can set whether to adjust the Zone 2 or Zone 3 volume on the receiver or to fix it to a specific volume (–40 dB Fixed or 0 dB Fixed). This is set to Variable upon shipment from the factory, allowing the volume to be adjusted on the receiver. If you would like to adjust the volume from the connected amplifier, make the setting below.
- **HDZONE** can be set when Speaker System is 7.2ch + HDZONE, 5.2 Bi-Amp+HDZONE or 5.2 + ZONE 2+HDZONE.
- **HDZONE** is set to Variable. It cannot be set to –40 dB Fixed and 0 dB Fixed.

**CAUTION**

- Note that when **Volume Level** is set to 0 dB Fixed, the audio output from the AUDIO ZONE 2 OUT terminals is set to the maximum. Also, depending on the volume setting on the connected amplifier, large volumes may be produced even when **Volume Level** is set to –40 dB Fixed.

1. Select ‘ZONE Setup’ from the Other Setup menu.
2. Select a sub zone for which you wish to change the setting.
3. Select the Volume Level setting you want.
   - **Variable** (default) – Adjusts the sound volume of the sub zone using this unit.
   - –40 dB Fixed 0 dB Fixed – The Zone 2/Zone 3 volume level output from the receiver is fixed to the value set here.
4. Select the Power ON Level setting you want.

Sets the sound volume of the sub zone when the multi-zone function is used to turn on the sub zone. Volume can be set for ZONE 2, ZONE 3, and HDZONE, respectively.

- **LAST** (default) – When MULTI-ZONE is turned on, the volume is set to the level set the last time you were listening to that zone.
- ‘–’ (default) – When MULTI-ZONE is turned on, the volume for that zone is set to the minimum.
- –80.0 dB to 0 dB – When MULTI-ZONE is turned on, the volume is set to the level set here. The volume can be set up to the value set at **Volume Limit** below.

5. Select the Volume Limit setting you want.

The maximum volume for the zone selected in step 2 can be set.
- **OFF** (default) – The maximum volume is not limited.
- –20.0 dB to –10.0 dB – The maximum volume is limited to the value set here.
6. Select the Mute Level setting you want.

The mute level for the zone selected in step 2 can be set.
- **FULL** (default) – No sound.
- –40.0 dB to –20.0 dB – The volume will be turned down to the level specified here.
7. Adjust Lch Level and Rch Level.

The channel level for the zone selected in step 2 can be set.
- The level can be adjusted between –12.0 dB and +12.0 dB, in 1 dB steps.

8. Select the HPF (High Pass Filter) setting you want.

This can only be set when **ZONE 2** is selected in step 2.
- **OFF** (default) – The High Pass Filter function is disabled.
- **ON** – The High Pass Filter function is enabled.
9. Select the TONE setting you want.

This can only be set when **ZONE 2** is selected in step 2.
- **BYPASS** (default) – The low frequency component output from the AUDIO ZONE 2 OUT terminals is cut. When a subwoofer is connected in Zone 2, we recommend setting this to ‘**ON**’. This is only valid when Zone 2 is connected using the AUDIO ZONE 2 OUT terminals.
- **OFF** – When **ZONE 2** is selected in step 2.
- **ON** – The bass and treble for ZONE 2 can be adjusted. When **ZONE 2** is selected, the original sound is played as such. When **ZONE 2** is selected, the **BASS** and **TREBLE** can be adjusted.
- **BYPASS** (default) – When the speaker terminals are being used for ZONE 2, the **ZONE 2 TONE** effect is valid when **Speaker System** is set to 5.2 Bi-Amp+HDZONE, 5.2 + ZONE 2+ZONE 3 or 5.2 + ZONE 2+HDZONE. When set to 7.2ch + HDZONE, Multi-ZONE Music, the **ZONE 2 TONE** effect is not applied.
10. Adjust the bass (BASS) and treble (TREBLE) to your tastes.

This can only be set when **ZONE 2** is selected in step 2.
- The **BASS** and **TREBLE** can each be adjusted between –10.0 dB and +10.0 dB, in 1 dB steps.
11. When you’re finished, press RETURN.

You will return to the Other Setup menu.
On Screen Display Setup
When the receiver is operated, its status (the input name, listening mode, etc.) is displayed superimposed over the video output on the display. This status display can be turned off by switching this setting to OFF. The setting can be made for the main zone and HDZONE, respectively.

- Default: ON (both the main zone and HDZONE)

1 Select ‘On Screen Display Setup’ from the Other Setup menu.
2 Select and set the main zone or HDZONE for which you wish to change the setting.
3 Select the On Screen Display setting you want.
4 When you’re finished, press RETURN.

You will return to the Other Setup menu.

Notes
- The on-screen display is only displayed for video output from the HDMI terminal.
- When the video input signal is a 3D signal, the on-screen display may not be displayed.
- The size of the characters displayed differs according to the output resolution.

Play ZONE Setup
Select the zone for playing the audio contents of devices in the home network when using in the DMR mode.

- For playable DLNA-compatible network devices, see page 67.

1 Select ‘Play ZONE Setup’ from the Other Setup menu.
2 Select the zone in which you want to play the audio contents.
3 When you’re finished, press RETURN.

You will return to the Other Setup menu.

Notes
- If another zone is on, it may not be possible to play the audio contents. In this case, turn the other zone off, then play the audio contents.
- MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 107).

Maintenance Mode
Only use this if so instructed by a Pioneer service engineer or custom installer.

Making network settings using Safari

1 Launch Safari on your computer.
2 Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.

If Bonjour list is not displayed, access the IP address “http://(the receiver’s IP address)” from Safari.

3 On the AVNavigator menu screen, select Network Setup.

4 Click IP, Proxy Setting.
5 Setup the network settings manually and then press Apply.

Note
This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.
Using Safari to set a friendly name

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address “http://(the receiver’s IP address)” from Safari.
3. On the AVNavigator menu screen, select Network Setup.
4. Click Friendly Name.
5. Input a friendly name, then press Apply.

Note

This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

Using Safari to update the firmware

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address “http://(the receiver’s IP address)” from Safari.
3. On the AVNavigator menu screen, select Network Setup.
4. Click Firmware Update.
5. Press Start.
   The firmware update prepare screen is displayed. If the screen does not switch automatically, click Click here.

6. Browse the latest firmware on your computer (a) and then press Upload (b).
   Firmware files have the extension “.fw”. Select a file with the extension “.fw”.
   The confirmation screen is displayed. If you continue the firmware update, press OK. Once the firmware update process starts, you cannot stop it. Wait until the file is uploaded (about one minute may be required depending on your LAN connection environment).

7. The firmware upload status screen is displayed.
   ‘The upload process finished successfully.’ will be shown when the update is completed.
   Once updating is completed, the receiver’s power automatically turns off.

Note

This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

Troubleshooting
Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest Pioneer authorized independent service company to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.
- If the problem is not solved after the troubleshooting below, if the screen freezes unexpectedly or if the buttons on the remote control or front panel stop working completely, do the following:

Power

**Symptom**
The power does not turn on.

**Remedy**
Make sure that the power cord is plugged in to an active power outlet.
Try disconnecting the power outlet, then plugging back in.

Power cannot be turned off.

**Symptom**

**Remedy**
Press the ZONE 2 button on the remote control for 1.5 seconds and then press the STANDBY/ON button on the front panel to turn off the power.

Power cannot be turned off.

**Symptom**

**Remedy**
Press the ZONE 3 button on the remote control for 1.5 seconds and then press the STANDBY/ON button on the front panel to turn off the power.

Power cannot be turned off.

**Symptom**

**Remedy**
Press the HDZONE button on the remote control for 1.5 seconds and then press the STANDBY/ON button on the front panel to turn off the power.

The receiver suddenly switches off or the iPod iPhone indicator blinks.

**Symptom**

**Remedy**
Check that there are no loose strands of speaker wire touching the rear panel or another set of wires. If so, re-attach the speaker wires, making sure there are no stray strands.
The receiver may have a serious problem. Disconnect from the power and call a Pioneer authorized independent service company.

No sound

**Symptom**
The receiver suddenly switches off or the FL OFF indicator blinks.

**Remedy**
There is a possibility that the power supply circuit of the receiver has failed. Wait at least one minute and then turn ON the power again. If the same symptom appears again after turning ON the power again, stop using the receiver, disconnect the power cable and request repair.

AMP OVERHEAT blinks in the display and the FL OFF indicator flash and the power turns off.

**Symptom**

**Remedy**
Allow the unit to cool down in a well-ventilated place before switching back on (see Installing the receiver on page 10).
Check whether the cables used to connect the speakers are short-circuited.
Wait at least 1 minute, then try turning the power on again.
The temperature within the unit has exceeded the allowable value.
Lower the volume level.

HDZONE cannot be turned on.

**Symptom**

**Remedy**
Set Output Setting to MAIN/HDZONE to HDZONE (page 10).
The receiver suddenly power off or MCACC PRO flashes.
The power unit is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

FAN STOP is displayed, then iPod iPhone indicator blinks.
The built-in cooling fan is malfunctioning. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.
Display blinks 12V TRIG ERR.
An error has arisen in the 12V trigger jacks. Reconnect accurately then turn the power back on.

No sound from the surround or center speakers.

**Symptom**

**Remedy**
Check that the Speaker Listening mode is set to Stereo, Front Stage, or Center Direct. (See Selecting the speaker listening mode on page 62.)
Check that the MCACC setup microphone is disconnected.
Check that the source component is connected properly (see Connecting your equipment on page 19).
Check that the speakers are connected properly (see Connecting the speakers on page 20).

No sound from surround back speakers.

**Symptom**

**Remedy**
Check that the surround back speakers are set to LARGE or SMALL and the surround speakers are not set to NO (see Speaker Setting on page 10).
Check that the surround back speakers are connecte.
Check that the speaker connections (see Connecting the speakers on page 20).
When Dolby Surround is selected, audio is not output from the surround back speaker when it is the only one connected (set).
**Symptom** | **Remedy**
---|---
No sound from front height or front wide speakers. | Check that the front height or front wide speakers are set to LARGE or SMALL, and the surround speakers are not set to NO (see Speaker Setting on page 102).

When Speaker System is set to 7.2.2ch TMD/FW and SP: TMD ON is selected with the OUTP button, no sound will be output from the front wide speakers. Select SP: FW ON or SP: TMD/FW ON (see Switching the speaker terminals on page 81).

When Speaker System is set to 7.2.2ch TMD/FH and SP: TMD ON is selected with the OUTP button, no sound will be output from the front height speakers. Select SP: FH ON or SP: TMD/FH ON (see Switching the speaker terminals on page 81).

When Speaker System is set to 7.2.2ch TMD/FV and Dolby Surround is selected, audio is not output from the front wide speakers.

No sound from subwoofer. | Check that the subwoofer is connected properly, switched on and the volume turned up.

If your subwoofer has a sleep function, make sure it is switched off.

Make sure that the Subwoofer setting is YES or PLUS (see Speaker Setting on page 102).

The crossover frequency may be set too low. Try setting it higher to match the characteristics of your other speakers (see Speaker Setting on page 102).

If there is very little sound information in the source material, change the speaker settings to Front: SMALL / Subwoofer: YES or Front: LARGE / Subwoofer: PLUS (see Speaker Setting on page 102).

Check that the LFE channel is not set to OFF, or to a very quiet setting (see Setting the Audio options on page 77).

Check the speaker level settings (see Channel Level on page 109).

Check the speaker level settings (see Channel Level on page 109).

No sound from the speakers. | Check the AMP setting. Set it to ON when you want to output sound from all the speakers (Setting the Audio options on page 77).

Check the speaker connection (see Connecting the speakers on page 54).

Check the speaker level settings (see Channel Level on page 109).

Check that the speaker hasn’t been set to NO (see Speaker Setting on page 102).

The channel may not be recorded in the source. By using one of the advanced effect speaker settings to Front: SMALL / Subwoofer: YES or Front: LARGE / Subwoofer: PLUS (see Speaker Setting on page 102).

Check the digital output settings on the source component.

Check that the input signal type is set to DIGITAL (see Choosing the input signal on page 64).

Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 50).

Check the digital output settings on the source component.

If the source component has a digital volume control, make sure this is not turned down.

Sound is produced from analog components, but not from digital ones (DVD, LD, CD, etc.). | Check that your BD or DVD player is compatible with Dolby Digital/DTS discs.

Check the digital output settings or the HDMI audio output settings of your BD or DVD player. Make sure that the DTS signal output is set to ON.

If the source component has a digital volume control, make sure this is not turned down.

No sound is output or a noise is output when Dolby Digital/DTS software is played back. | Check that you BD or DVD player is compatible with Dolby Digital/DTS discs.

Check the digital output settings or the HDMI audio output settings of your BD or DVD player.

Make sure that the DTS signal output is set to On.

If the source component has a digital volume control, make sure this is not turned down.

No sound when using the HOME MENU | If the HDMI input function is selected, sound is muted until exiting the HOME MENU.

Other audio problems

**Symptom** | **Remedy**
---|---
Speaker switching sound (clicking sound) is heard from receiver during playback. | Since ECO MODE 1 and ECO MODE 2 reduce the power consumption, the speakers are switched in function of the number of input channels. Because of this, a speaker switching sound (clicking sound) may be produced when the number of input channels is switched. If this bothers you, switch to a different listening mode.

Depending on the listening mode, the front height (or front wide) and surround back speakers may switch automatically in function of changes in the input audio. A speaker switching sound (clicking sound) will be heard from the receiver at this time. If this sound bothers you, we recommend to change the speaker terminal option (see Switching the speaker terminals on page 81).

Broadcast stations cannot be selected automatically, or there is considerable noise in radio broadcasts. | Fully extend the FM wire antenna, adjust the position for best reception and secure to a wall, etc.

Use an outdoor antenna for better reception (see page 107).

Noise is output when scanning a DTS CD. | This is not a malfunction of the receiver. The scan function of your player alters the digital information, making it unreadable, resulting in noise being output. Lower the volume when scanning.

When playing a DTS format LD there is audible noise on the soundtrack. | Make sure that the input signal type is set to DIGITAL (see Choosing the input signal on page 64).

Can’t record audio. | You can only make a digital recording from a digital source, and an analog recording from an analog source.

For digital sources, make sure that you’re recording isn’t copy protected.

Subwoofer output is very low. | To route more signal to the subwoofer, set it to PLUS or set the front speakers to SMALL (see Speaker Setting on page 107).

The speakers may be out of phase. Check that the positive/negative speaker terminals on the receiver are matched with the corresponding terminals on the speakers (see Connecting the speakers on page 54).

The Phase Control feature doesn’t seem to have an audible effect. | If applicable, check that the lowpass filter switch on your subwoofer is off, or the lowpass cutoff is set to the highest frequency setting. If there is a PHASE setting on your subwoofer, set it to 0° (or depending on the subwoofer, the setting where you think it has the best overall effect on the sound).

Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 102).

Full Band Phase Control cannot be selected. | Perform Full Auto MCACC measurements (see Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48). Full Band Phase Control automatically turns on once measurements are completed.

Noise or hum can be heard even when there is no sound being input. | Check that personal computers or other digital components connected to the same power source are not causing interference.

Can’t select some Input functions when there is no sound being input. | Check the Input Skip settings in the Input Setup menu (see The Input Setup menu on page 50).

Check the HDMI Input assignment in the Input Setup menu then try OFF (see The Input Setup menu on page 50).

There seems to be a time lag between the speakers and the output of the subwoofer. | See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 48 to set up your system again using MCACC (this will automatically compensate for a delay in the subwoofer output).
### Symptom | Remedy
--- | ---
The maximum volume available (shown in the front panel display) is lower than the +12dB maximum. | Check that the **Volume Limit** is set to **OFF** (see **Volume Setup** on page 106). The channel level setting may be over 0.0dB.

Certain listening modes or **HOME MENU** items cannot be selected. | When **Operation Mode** is set to **Basic**, the Pioneer-recommended settings are made and not all of the functions can be used. To use all of the functions without restrictions, set **Operation Mode** to **Expert** (see **Operation Mode Setup** on page 51). Some functions cannot be selected, depending on the input signal and listening mode.

The volume level drops automatically. | **ADT OVERLOAD** is displayed.
The channel level setting may be over 0.0dB.

The volume level drops automatically. | When **ADT OVERLOAD** is displayed, connect the Bluetooth adapter and insert the Bluetooth adapter again, then turn ON the power of the receiver.

Volume seems different when input is switched. | When HDZONE is **ON**, multi-channel audio sources are not output in the main zone.
When HDZONE is **ON**, multi-channel audio sources are not output in the main zone. | When HDZONE is **ON**, multi-channel audio may not be output. In this case, set the audio output setting of your playback device to 2-channel PCM.

No HDZONE sound is output. | With HDZONE, multi-channel audio may not be output. In this case, set the audio output setting of your playback device to 2-channel PCM.

### ADAPTER PORT terminal

**Symptom** | **Remedy**
The Bluetooth wireless technology device cannot be connected or operated. Sound from the Bluetooth wireless technology device is not emitted or the sound is interrupted. | Check that no object that emits electromagnetic waves in the 2.4 GHz band (microwave oven, wireless LAN device or Bluetooth wireless technology apparatus) is near the unit. If such an object is near the unit, set the unit far from it. Or, stop using the object emitting the electromagnetic waves. Check that the Bluetooth adapter and the **ADAPTER PORT** of the unit are correctly connected. The Bluetooth wireless technology device may not be set to the communication mode supporting the Bluetooth wireless technology. Check the setting of the Bluetooth wireless technology device. Check that pairing is correct. The pairing setting was deleted from this unit or the Bluetooth wireless technology device. Reset the pairing. Check that the profile is correct. Use a Bluetooth wireless technology device that supports A2DP profile and AVRCP profile.

**ADT OVERLOAD** is displayed on the display. | There is a problem in the power supply for the Bluetooth adapter. After turning OFF the power of the receiver, disconnect the Bluetooth adapter and insert the Bluetooth adapter again, then turn ON the power of the receiver. If **ADT OVERLOAD** is displayed even though the above operation is repeated several times, there is a problem with the receiver or the Bluetooth adapter. Disconnect the power cable and request repair.
**Settings**

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Auto MCACC Setup continually shows an error.</td>
<td>The ambient noise level may be too high. Keep the noise level in the room as low as possible (see also Problems when using the Auto MCACC Setup on page 69). If the noise level cannot be kept low enough, you will have to set up the surround sound manually (page 109). When using only one surround back speaker, connect it to the SURROUND BACK L (Single) terminals. To use a 5.1-channel speaker set, use the surround speakers for the surround channel, not the surround back channel. Make sure there are no obstacles between the speakers and the microphone. If Reverse Phase is displayed, try the following: — The speaker’s wiring (+ and –) may be inverted. Check the speaker connections. — Depending on the type of speakers and their installation conditions, Reverse Phase may be displayed even if the speakers are properly connected. If this happens, select GO NEXT and continue. — If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), it may not be possible to properly identify the polarity.</td>
</tr>
<tr>
<td>After using the Auto MCACC Setup, the speaker size setting is incorrect.</td>
<td>There may have been some low frequency noise in the room from an air-conditioner, motor, etc. Switch off all other appliances in the room and use Auto MCACC Setup again. Depending on a number of factors (bass reproduction capabilities of the speakers, room size, speaker placement, etc.) this may occur in some cases. Change the speaker setting manually in Speaker Setting on page 107, and use the ALL (Keep SP System) option for the Auto MCACC menu in Automatc MCACC (Expert) on page 94. If this is a recurring problem, can’t adjust the Fine Speaker Distance setting properly. Check that the speakers are all in phase (make sure the positive (+) and negative (–) terminals are matched up properly). The display shows KEY LOCK ON when you try to make settings. With the receiver in standby, press STANDBY/ON for about 5 seconds while holding down SPEAKERS to disable the key lock. Most recent settings have been erased. The power cord was disconnected from the wall while adjusting this setting. Settings are only stored if all the zones are turned off. Turn off all the zones before unplugging the power cord. The various system settings are not stored. Do not pull out the power cord while conducting the settings. (The settings will be stored when both the main zone and sub zone turn off. Turn off all zones before pulling out the power cord.) Certain listening modes or HOME MENU items cannot be selected. When Operation Mode is set to Basic, the Pioneer-recommended settings are made and not all of the functions can be used. To use all of the functions without restrictions, set Operation Mode to Expert (see Operation Mode Setup on page 65). Feels like there is no subwoofer EQ effect. The effect becomes less when the set frequency value of the crossover frequency is low. When setting a high frequency value, the subwoofer EQ effect becomes stronger. However, setting a higher crossover frequency increases the share that the subwoofer bears for low-frequency playback. For that reason, it is disadvantageous in terms of the phase point of view. Set to your preference.</td>
</tr>

</table>

**Professional Calibration EQ graphical output**

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The reverb characteristics graph after EQ calibration does not appear entirely flat.</td>
<td>There are cases where the graph does not appear flat (even when selecting ALL CH ADJ in the Auto MCACC Setup) due to adjustments made to compensate for room characteristics to achieve optimal sound. Areas of the graph may appear identical (before and after) when there is little or no adjustment needed. The graph may appear to have shifted vertically when comparing before and after measurements. EQ adjustments made using the Manual MCACC setup do not appear to change the reverb characteristics graph after EQ calibration.</td>
</tr>
</tbody>
</table>

**Display**

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The display is dark or off.</td>
<td>Press DIMMER repeatedly to select a different brightness.</td>
</tr>
</tbody>
</table>
### Remote control

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot be remote controlled.</td>
<td>Set the remote control unit’s remote control mode so that it matches the setting on the main unit (see Operating multiple receivers on page 104). Check whether the receiver’s remote control mode is properly set (see Remote Control Mode Setup on page 100). Try replacing the batteries in the remote control (see Loading the batteries on page 10). Be sure to operate within 7 m and a 30º angle of the remote sensor on the front panel (see Operating range of remote control unit on page 11). Check that there are no obstacles between the receiver and the remote control. Make sure that there is no fluorescent or other strong light shining on to the remote sensor.</td>
</tr>
<tr>
<td>Other components can’t be operated with the system remote.</td>
<td>If the battery ran down, the preset codes may have been cleared. Re-enter the preset codes. The preset code may be incorrect. Redo the procedure for entering preset codes. When commands from the remote control units of other devices are registered using the learning function, in some cases they may not be learned properly. In this case, register the commands again using the learning function (see page 82). If they still do not work, they may be in a special format that cannot be registered on this receiver’s remote control. Operate the device using another remote control.</td>
</tr>
</tbody>
</table>

---

### HDMI

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The HDMI indicator blinks continuously.</td>
<td>Check all the points below.</td>
</tr>
<tr>
<td>Video/audio is not output or is interrupted.</td>
<td>This receiver is HDCP-compatible. Check that the components you are connecting are also HDCP-compatible. If they are not, please connect them using the component or composite video jacks. Depending on the connected source component, it’s possible that it will not work with this receiver (even if it is HDCP-compatible). In this case, connect using the component or composite video jacks between source and receiver. If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support. If video images do not appear on your TV, try adjusting the resolution, Deep Color or other setting for your component. While analog video signals are being output over HDMI, use a separate connection for audio output. To output signals in Deep Color, use an HDMI cable (High Speed HDMI® Cable) to connect this receiver to a component or TV with the Deep Color feature.</td>
</tr>
<tr>
<td>The picture and sound output get cut off, or there is no output produced.</td>
<td>Influence from a TV whose power is set to standby may cause the picture or sound output to not be produced or to get cut off. In this case, press OUT P., and make sure to use an output other than the HDMI output to which that TV is connected.</td>
</tr>
<tr>
<td>No picture.</td>
<td>Try changing the Resolution setting (see Setting the Video options on page 65). To use the HDMI OUT 3 terminal in the main zone, set the MAIN/HDZONE Output Setting to MAIN (page 117).</td>
</tr>
<tr>
<td>No sound, or sound suddenly ceases.</td>
<td>Check that the HDMI Audio setting is set to AMP (Setting the Audio options on page 77). If the component is a DVI device, use a separate connection for the audio. If analog video is being output over HDMI, please use a separate connection for the audio. Check the audio output settings of the source component. HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback. Turning off or on the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.</td>
</tr>
<tr>
<td>Noisy or distorted picture.</td>
<td>Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again. If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.</td>
</tr>
<tr>
<td>HDCP ERROR shows in the display.</td>
<td>Check whether or not the connected component is compatible with HDCP. If it is not compatible with HDCP, reconnect the source device using a different type of connection (component or composite). Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video, this is not a malfunction.</td>
</tr>
</tbody>
</table>
Synchronized operation not possible using Control with HDMI function.

**Remedy**
- Check the HDMI connections.
- The cable may be damaged.
- Select ON for the Control Mode with HDMI setting (see page 73).
- Turn the TV’s power on before turning on this receiver’s power.
- Set the TV side Control with HDMI setting to on (see TV’s operating instructions).
- Connect the TV to the HDMI OUT 1 terminal and set the HDMI output to OUT 1. Then turn on first the TV’s power, then this receiver’s power.
- When **HDZONE** is set to ON, the video resolution and number of audio channels for the main zone side changes.
- This is due to the HDMI connection specifications; it is not a malfunction. When playing the same input in the main zone and **HDZONE**, video and audio signals that can be output in common for all the devices connected to the HDMI OUT 1, HDMI OUT 2 and HDMI OUT 3 (**HDZONE**) terminals are set.
- **HDZONE** cannot be turned on.
- Set Output Setting at MAIN/HDZONE to HDZONE (page 10).
- When the input source for the main or **HDZONE** is switched or when the power of the respective zones is turned on and off, the audio or video of the HDMI output terminal that is not being operated is sometimes interrupted.
- Such menus as the HOME MENU as well as the on-screen display are not displayed for HDMI OUT 1 or HDMI OUT 2.
- Cannot upscale to 4K or 1080p.
- Change V.CONV to ON (page 29).
- Change RES. (page 18).
- When **HDZONE** is turned on, upsampling cannot be performed. To perform upsampling, turn off **HDZONE** (page 18).
- 4K video is not output even though a 4K compliant TV is connected.
- When the MAIN/HDZONE setting is MAIN and the HDMI output setting is OUT 1 or 2, and when the MAIN/HDZONE setting is **HDZONE** and **HDZONE** is the same input as with the main zone, video is output with the lower resolution of the TV connected to HDMI OUT 1 and HDMI OUT 2. When there is only one 4K compliant TV, connect it to HDMI OUT 1 and set the HDMI output setting to OUT 1 or turn off **HDZONE** so that video is only output to the 4K compliant TV.
- Even though a 4K/60p 4:4:4 24 bit compatible TV is connected, the 4K/60p 4:4:4 24 bit video image is not output correctly.
- Set the HDMI 4K/60p signal output setting to 4:4:4 (page 12).
- When the HDMI cable does not support 4K/60p 4:4:4 24 bit (18 Gbps transmission), video images may not be output properly. In that case, replace the cable with a compatible HDMI cable or change the HDMI 4K/60p signal output setting to 4:2:0 to watch the 4K/60p 4:2:0 24 bit video image.

**MHL**

**Symptom**
- When playing an MHL-compatible device connected to the HDMI/MHL terminal, the Standby Through function does not work and the power turns off.

**Remedy**
- The MHL device will not operate unless power is being supplied from this receiver. When this receiver is in the Standby Through mode, power cannot be supplied due to reduced power consumption. Because of this, the MHL device will not operate. This is not a malfunction.
- MHL-compatible device cannot be operated with the remote control.
- Press MHL to set the remote control to the MHL control mode.
- MHL POW ERR is displayed on the display.
- There is a problem with the power supply for the MHL device. After turning OFF the receiver, disconnect the MHL device, connect the MHL device again and then turn ON the power of the receiver. If the error is displayed even though the above operation is repeated several times, there is a problem with the receiver or the MHL device. Disconnect the power cable and request repair.

**Built-in AVNavigator**

**Symptom**
- AVNavigator does not interact well with the receiver.

**Cause**
- The receiver’s power is not turned on.
- The receiver or computer is not connected to the LAN.
- Network connections could be restricted due to the computer’s network settings, security settings, etc.
- In the middle of Wiring Navi, you are instructed to turn off the power of the unit and then connect other equipment or speakers.
- This is to avoid failure of the receiver due to a short-circuit between cables or from static electricity.
- When the Wiring Navi or Interactive Operation Guide is launched, a warning about security protection appears on the browser.
- This is because of the browser’s security function.

**Remedy**
- Turn the receiver’s power on. (Wait about 60 seconds after the power turns on for network functions to start.)
- Connect a LAN cable to the receiver or computer (page 40).
- Turn the router’s power on.
- Check the computer’s network settings, security settings, etc.
- Per the Wiring Navi instructions, turn OFF the power of the receiver. As long as the browser has not quit, Wiring Navi resumes guidance upon turning ON the receiver.
- This receiver’s IP address has not been entered into the browser correctly.
- Check the receiver’s IP address and enter it correctly in the browser (page 105).
- Receiver settings cannot be made from a browser.
- This browser is disabled on the internet browser.
- Enable JavaScript.
- The browser is not compatible with JavaScript.
- Use an internet browser that is compatible with JavaScript.

<tr>
<td></td>
<td></td>
<td>When this unit is in standby, it cannot be selected from the Spotify application.</td>
</tr>
</tbody>
</table>
There is a microwave oven or other device generating electromagnetic waves near the wireless LAN environment.
- Use the system in a place away from microwave ovens or other devices generating electromagnetic waves.
- Avoid using devices generating electromagnetic waves as much as possible when using the system with the wireless LAN.

Multiple wireless LAN converters are connected to the wireless LAN router.
- When connecting multiple wireless LAN converters, their IP addresses must be changed.

Wireless LAN connections cannot be established between the wireless LAN converter and base unit (wireless LAN router, etc.).
- The wireless LAN converter must be set in order to establish wireless LAN connections. For details, see the CD-ROM included with the wireless LAN converter.

The IP address settings of the receiver and wireless LAN converter do not match the settings of the wireless LAN router, etc.
- Check the IP address settings of the receiver and wireless LAN converter (including the DHCP setting).
- If the receiver’s DHCP setting is “ON”, turn the receiver’s power off, then turn the power back on.
- Check that the IP addresses of the receiver and wireless LAN converter match the settings of the wireless LAN router, etc.
- If the receiver’s DHCP setting is “OFF”, set an IP address matching the network of the base unit (wireless LAN router, etc.).

For example, if the wireless LAN converter’s IP address is “192.168.1.1”, set the receiver’s IP address to “192.168.1.XXX” (*1), the subnet mask to “255.255.255.0”, the gateway and DNS to “192.168.1.1”.
- Next, set the wireless LAN converter’s IP address to “192.168.1.249” (*2).
- (*1) Set the “XXX” in “192.168.1.XXX” to a number between 2 and 248 that is not assigned to other devices.
- (*2) Set the “249” in “192.168.1.249” to a number between 2 and 249 that is not assigned to other devices.

Try making the wireless LAN converter’s advanced settings.
- The wireless LAN converter can be connected to a computer to make the advanced wireless LAN settings. For details, see the CD-ROM included for the wireless LAN converter. Check the settings of the wireless LAN router, etc., then change the settings of the wireless LAN converter.
- Note, however, that making the advanced wireless LAN settings will not necessarily improve the wireless LAN environment. Be careful when changing the settings.

The access point is set to conceal the SSID.
- In this case, the SSID may not be displayed on the access point list screen. If not, set the SSID, etc., by making the wireless LAN converter settings on the receiver manually.

The access point’s security settings use WEP 152-bit length code key or shared key authentication.
- The receiver does not support WEP 152-bit length code key or shared key authentication.

Network connections cannot be established even when the above measures are taken.
- Reset the wireless LAN converter. After this, redo the wireless LAN converter’s settings.

About resetting
1. Check that the wireless LAN converter’s power is on.
2. Press the wireless LAN converter’s reset button for at least 3 seconds.
3. Release the reset button.

When the wireless LAN converter is restarted, the resetting procedure is completed.

### Wireless LAN

**Network cannot be accessed via wireless LAN.**

Wireless LAN converter’s power is not on. (Wireless LAN converter’s “Power”, “WPS” and “Wireless” indicators are not all lit.)
- Check that the USB cable connecting the wireless LAN converter to the receiver’s DC OUTPUT for WIRELESS LAN terminal is properly connected.

**WLAN POW ERR** is displayed on the receiver’s display window.
- There is a problem with the wireless LAN converter’s power supply. Turn the receiver’s power off, then disconnect the USB cable, reconnect the USB cable and turn the receiver’s power back on.
- * If **WLAN POW ERR** is still displayed after repeating the above procedure several times, there is a problem with the receiver or the USB cable. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

The LAN cable is not firmly connected.
- Firmly connect the LAN cable (page 44).

Wireless LAN converter and base unit (wireless LAN router, etc.) are too far apart or there is an obstacle between them.
- Improve the wireless LAN environment by moving the wireless LAN converter and base unit closer together, etc.

### FAQ

</tbody>
</table>

With an AV receiver that has the System Setup → Other Setup → Play ZONE Setup option, the sound may be playing in another zone.
- A volume upper limit is provided so that the volume will not inadvertently go up too much.

This unit’s volume does not increase when the volume slider in the Spotify application is raised.
- To further increase the volume, use the remote control.

The Network functions are quit.
- Press NET to set the remote control to the Network function mode (page 69).

When DMR mode or AirPlay is used from a computer, smartphone, etc., the sound is played in subzone.
- Change Play ZONE Setup to MAIN (page 129).

If a volume upper limit is provided so that the volume will not inadvertently go up too much.
- When the Spotify audio stream continues from this unit, even when the Spotify application is quit.

Check that the USB cable connecting the wireless LAN converter to the receiver’s USB terminal is properly connected.
- Check the IP address settings of the receiver and wireless LAN converter (including the DHCP setting). If the receiver’s DHCP setting is “ON”, turn the receiver’s power off, then turn the power back on.

Check that the receiver’s DHCP setting is “OFF”, set an IP address matching the network of the base unit (wireless LAN router, etc.).
- If the receiver’s DHCP setting is “OFF”, set an IP address matching the network of the base unit (wireless LAN router, etc.).

For example, if the wireless LAN router’s IP address is “192.168.1.1”, set the receiver’s IP address to “192.168.1.XXX” (*1), the subnet mask to “255.255.255.0”, the gateway and DNS to “192.168.1.1”. Next, set the wireless LAN converter’s IP address to “192.168.1.249” (*2).
- (*1) Set the “XXX” in “192.168.1.XXX” to a number between 2 and 248 that is not assigned to other devices.
- (*2) Set the “249” in “192.168.1.249” to a number between 2 and 249 that is not assigned to other devices.

Try making the wireless LAN converter’s advanced settings.
- The wireless LAN converter can be connected to a computer to make the advanced wireless LAN settings. For details, see the CD-ROM included for the wireless LAN converter. Check the settings of the wireless LAN router, etc., then change the settings of the wireless LAN converter.

Note, however, that making the advanced wireless LAN settings will not necessarily improve the wireless LAN environment. Be careful when changing the settings.

The access point is set to conceal the SSID.
- In this case, the SSID may not be displayed on the access point list screen. If not, set the SSID, etc., by making the wireless LAN converter settings on the receiver manually.

The access point’s security settings use WEP 152-bit length code key or shared key authentication.
- The receiver does not support WEP 152-bit length code key or shared key authentication.

Network connections cannot be established even when the above measures are taken.
- Reset the wireless LAN converter. After this, redo the wireless LAN converter’s settings.

About resetting
1. Check that the wireless LAN converter’s power is on.
2. Press the wireless LAN converter’s reset button for at least 3 seconds.
3. Release the reset button.

When the wireless LAN converter is restarted, the resetting procedure is completed.

There is a microwave oven or other device generating electromagnetic waves near the wireless LAN environment.
- Use the system in a place away from microwave ovens or other devices generating electromagnetic waves.
- Avoid using devices generating electromagnetic waves as much as possible when using the system with the wireless LAN.

Multiple wireless LAN converters are connected to the wireless LAN router.
- When connecting multiple wireless LAN converters, their IP addresses must be changed.

Wireless LAN connections cannot be established between the wireless LAN converter and base unit (wireless LAN router, etc.).
- The wireless LAN converter must be set in order to establish wireless LAN connections. For details, see the CD-ROM included with the wireless LAN converter.

The IP address settings of the receiver and wireless LAN converter do not match the settings of the wireless LAN router, etc.
- Check the IP address settings of the receiver and wireless LAN converter (including the DHCP setting).
- If the receiver’s DHCP setting is “ON”, turn the receiver’s power off, then turn the power back on.
- Check that the IP addresses of the receiver and wireless LAN converter match the settings of the wireless LAN router, etc.

If the receiver’s DHCP setting is “OFF”, set an IP address matching the network of the base unit (wireless LAN router, etc.).

For example, if the wireless LAN router’s IP address is “192.168.1.1”, set the receiver’s IP address to “192.168.1.XXX” (*1), the subnet mask to “255.255.255.0”, the gateway and DNS to “192.168.1.1”. Next, set the wireless LAN converter’s IP address to “192.168.1.249” (*2).
- (*1) Set the “XXX” in “192.168.1.XXX” to a number between 2 and 248 that is not assigned to other devices.
- (*2) Set the “249” in “192.168.1.249” to a number between 2 and 249 that is not assigned to other devices.

Try making the wireless LAN converter’s advanced settings.
- The wireless LAN converter can be connected to a computer to make the advanced wireless LAN settings. For details, see the CD-ROM included for the wireless LAN converter. Check the settings of the wireless LAN router, etc., then change the settings of the wireless LAN converter.

Note, however, that making the advanced wireless LAN settings will not necessarily improve the wireless LAN environment. Be careful when changing the settings.

The access point is set to conceal the SSID.
- In this case, the SSID may not be displayed on the access point list screen. If not, set the SSID, etc., by making the wireless LAN converter settings on the receiver manually.

The access point’s security settings use WEP 152-bit length code key or shared key authentication.
- The receiver does not support WEP 152-bit length code key or shared key authentication.

Network connections cannot be established even when the above measures are taken.
- Reset the wireless LAN converter. After this, redo the wireless LAN converter’s settings.

About resetting
1. Check that the wireless LAN converter’s power is on.
2. Press the wireless LAN converter’s reset button for at least 3 seconds.
3. Release the reset button.

When the wireless LAN converter is restarted, the resetting procedure is completed.

Surround sound formats
Below is a brief description of the main surround sound formats you'll find on BDs, DVDs, satellite, cable and terrestrial broadcasts, and video cassettes.

Dolby
The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

DTS
The DTS technologies are explained below. See http://www.dts.com for more detailed information.

SABRE DAC™
SABRE DAC™ and the logo are trademarks of ESS Technology, Inc.

About HDMI
HDMI (High-Definition Multimedia Interface) is a digital transfer standard for receiving video and audio data with a single cable. It is an adaptation of DVI (Digital Visual Interface), a display connection technology, for use in home audio devices. This interface standard is for next-generation TVs providing High-bandwidth Digital Content Protection (HDCP).

HTC Connect
HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.
About iPod

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.
USB works with iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPhone 3G, iPhone, iPod touch (1st through 5th generation) and iPod nano (3rd through 7th generation).
"Made for iPod" and "Made for iPhone" mean that an electronic accessory has been designed to connect specifically to iPod or iPhone, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod or iPhone may affect wireless performance.
Apple, AirPlay, iPad, iPhone, iPod, iPod nano, iPod touch, iTunes, Safari, Bonjour, Mac, Mac OS and OS X are trademarks of Apple Inc., registered in the U.S. and other countries.
The AirPlay logo is a trademark of Apple Inc.
App Store is a service mark of Apple Inc.

Windows 8

This product is Windows 8.1 Compatible and Windows 8 Compatible.

Windows® and the Windows logo are trademarks of the Microsoft group of companies.

• ALC cannot be selected when the input signal is Dolby Atmos format.
• For details on Dolby Atmos, see page 126.
Speaker Setting Guide

In order to achieve an even better surround effect, it is important to accurately position the speakers and make their volume and tone characteristics uniform so as to finely focus the multi-channel sound.

The three major elements in positioning the speakers are distance, angle, and orientation (the direction in which the speakers are pointing).

Distance: The distance of all the speakers should be equal.

Angle: The speakers should be horizontally symmetrical.

Orientation: The orientation should be horizontally symmetrical.

In most homes, however, it is not possible to achieve this environment. For the distance, on this receiver it is possible to automatically correct the speaker distance electrically to a precision of 1 cm using the Full Auto MCACC Setup function (page 48).

Step 1: Speaker layout and distance adjustment

Use speaker stands or the like to make sure the speakers are steady, and leave at least 10 cm from the surrounding walls. Position the speakers attentively so that the speakers on the left and right are at equal angles from the listening position (center of the adjustments). (We recommend using cords, etc., when adjusting the layout.) Ideally all the speakers should be equidistant from the listening position.

Note

If the speakers cannot be set at equal distances (on a circle), use the Auto MCACC Setup speaker distance correction and Fine Speaker Distance functions to make them equalize the distance artificially.

Step 2: Adjusting the speaker height

Adjust the heights (angles) of the different speakers. Adjust so that the front speaker units reproducing mid- and high frequencies is roughly at the height of the ears. If the center speaker cannot be set at the same height as the front speakers, adjust its angle of elevation to point it to the listening position. Set surround speaker 1 so that it is not under the height of the ears.

Step 3: Adjusting the speaker orientation

If the left and right speakers are not pointing in the same direction, the tone will not be the same on the right and left, and as a result the sound field will seem cramped. Testing by the Pioneer Multi-channel Research Group has shown that a good sense of sound positioning can be achieved by pointing all the speakers towards an area 30 cm to 80 cm behind the listening position (between the surround speakers and the listening position). However, the sense of sound positioning can differ according to the conditions in the room and the speakers being used. In smaller environments in particular (when the front speakers are close to the listening position), with this method the speakers will be pointed too inward. We suggest you use this example of installation as reference when trying out different installation methods.

Step 4: Positioning and adjusting the subwoofer

Placing the subwoofer between the center and front speakers makes even music sources sound more natural (if there is only one subwoofer, it doesn’t matter if it is placed on the left or right side). The low bass sound output from the subwoofer is not directional and there is no need to adjust the height. Normally the subwoofer is placed on the floor. Put it in a position at which it will not cancel out the bass sound output from the other speakers. Also note that placing it near a wall may result in sympathetic vibrations with the building that could excessively amplify the bass sound.

If the subwoofer must be installed near a wall, place it at an angle so that it is not parallel to the wall surface. This can help reduce any sympathetic vibrations, but depending on the shape of the room this could result in standing waves. However, even if standing waves are generated, their influence on the sound quality can be prevented using the Auto MCACC’s standing wave control function (page 96).

Step 5: Default settings with the Auto MCACC Setup (auto sound field correction) function

It is more effective to perform the Full Auto MCACC Setup (page 48) procedure once the adjustments described above have been completed.

Note

The distance to the subwoofer may be slightly larger than the distance actually measured with a tape measure, etc. This is because this distance is corrected for electric delay, and is not a problem.

Positional relationship between speakers and monitor

Position of front speakers and monitor

The front speakers should be as equidistant as possible to the monitor.

Position of center speaker and monitor

Since mostly dialogs are output from the center speaker, keeping the center speaker as close as possible to the screen makes the overall sound more natural. For TVs using Braun tubes, however, when installing the center speaker on the floor, adjust its angle of elevation to point it towards the listening position.

- If the center speaker is not of the shielded type, install it away from the TV.
- When installing the center speaker on top of the monitor, place it facing slightly downwards towards the listening position.
About messages displayed when using network functions

Important information regarding the HDMI connection

There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI-equipped component you are connecting-check with the manufacturer for HDMI compatibility information).

If you aren’t receiving HDMI signals properly through this receiver (from your component), please try one of the following configurations when connecting up.

Configuration A

Use component video cables to connect the video output of your HDMI-equipped component to the receiver’s component video input. The receiver can then convert the analog component video signal to a digital HDMI signal for transmission to the display. For this configuration, use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections.

Note

The picture quality will change slightly during conversion.

Configuration B

Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

Notes

- If your display only has one HDMI terminal, you can only receive HDMI video from the connected component.
- Depending on the component, audio output may be limited to the number of channels available from the connected display unit (for example audio output is reduced to 2 channels for a monitor with stereo audio limitations).
- If you want to switch the input function, you’ll have to switch functions on both the receiver and your display unit.
- Since the sound is muted on the display when using the HDMI connection, you must adjust the volume on the display every time you switch input functions.

Cleaning the unit

- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
- Never use thinners, benzene, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.

Glossary

**Audio formats/Decoding**

**Dolby**
The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

**Dolby Digital**
Dolby Digital is a multichannel digital audio coding system widely used in cinemas, and in the home for DVD and digital broadcast soundtracks.

**Dolby TrueHD**
Dolby TrueHD is the lossless encoding technology developed for high-definition optical discs in the upcoming era.

**Dolby Digital Plus**
Dolby Digital Plus is the audio technology for all high-definition programming and media. It combines the efficiency to meet future broadcast demands with the power and flexibility to realize the full audio potential expected in the upcoming high-definition era.

**Dolby Atmos**

- **Features**
  - Provides a powerful and dramatically new listening experience for cinema sound.
  - Creates a 3 dimensional listening environment where sounds can be transported through the room.
  - Reproduces a natural sound that matches the story exactly and sounds as if real.
  - Addition of audio elements in the height space above the listener. Height audio is reproduced by either overhead or Dolby enabled speakers.
  - The original intention of the producers can be expressed, no matter what kind of system setup you have in your home.

- **Technical information**
  - Placement for clearer, more accurate cinema sound is possible. With mixing that uses “objects”, independent sound elements can be superimposed on channel-based material.
  - By importing all of the intentions of the director as meta data, it is possible to customize play back for every home.
  - Soundtracks are scaled to achieve best performance through your specific speaker system.
  - Dolby Atmos uses a multi layering approach for building soundtracks. In combination with the conventional channel-based method, the base layer is composed of mainly motionless environmental sounds. On top of this layer is the layer that realizes the sound elements that have “movement”. Here, sound can be placed and moved so that it is linked accurately with the images on-screen.
  - In the meta data, it is indicated how this type of sound element will act when it is played back. This indication enables playback that reflects the intention of the director as much as possible, in any playback environment. This dual-layer approach not only allows moviemakers to freely make full use of a variety of expressions, but also enables users to experience the intentions of the producer in any type of home theater setup.
  - In order to enjoy Dolby Atmos, Dolby Atmos-compatible content is required. Dolby Atmos content on Dolby Atmos-compatible Blu-ray Discs can be played back on most conventional Blu-ray players by sending the Dolby Atmos bitstream to the AVR.

**DTS**
The DTS technologies are explained below. See http://www.dts.com for more detailed information.

**DTS Digital Surround**
DTS Digital Surround is a 5.1-channel audio coding system from DTS Inc. now widely used for DVD-Video, DVD-Audio, 5.1 music discs, digital broadcasts, and video games.
When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with Virtual Depth through your front speakers.

When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers.

When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your surround speakers. You can choose to listen to sources with no surround back channel.

When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel.

The Full Band Phase Control feature calibrates the frequency-phase characteristics of the speakers connected.

Phase Control Plus (Auto Phase Control Plus)   
Corrects the delay in the contents’ low frequency effects (LFE). When properly corrected, the bass sound is more powerful, improving the balance of the sound.

When AUTO is selected, the contents are analyzed in real time, allowing them to be played in optimal conditions. This is effective for contents with low frequency effects (LFE), such as Dolby Digital 5.1-channel contents.

Full Band Phase Control   
The Full Band Phase Control feature calibrates the frequency-phase characteristics of the speakers connected.

Virtual Speakers   
Virtual playback of a maximum of 11.2 channels combining the actually installed speakers and the virtual speakers is possible. This makes for smoother connection between the sounds and an improved 3D feel.

Virtual Surround Back   
When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel.

Virtual Height   
When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers.

Virtual Wide   
When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers.

Virtual Depth   
When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D image to achieve a better sense of presence.

Auto Sound Retriever   
The Auto Sound Retriever feature employs DSP technology to restore sound pressure and smooth jagged artifacts left over after compression.

With some audio inputs, the Sound Retriever effect is automatically optimized based on the bit ratio information of the contents that have been input to achieve high sound quality.

Sound Retriever Air   
Sound Retriever Air compensates for reduced sound quality due to compression when sending Bluetooth signals.

PQLS   
Jitterless high quality playback is possible by connecting a PQLS-compatible player with HDMI connections.

ALC (Auto Level Control)   
In the Auto level control (ALC) mode, this receiver equalizes playback sound levels.

Also, the low and high frequency sounds, dialogs, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.

Front Stage Surround Advance   
With the Front Stage Surround Advance feature, you can enjoy seamless, natural surround sound effects using only the front speakers, without deteriorating the quality of the original sound.

MCACC   
The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.

HDMI Control with HDMI function   
Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

ARC (Audio Return Channel)   
When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT terminal.

The sound of the TV can be input from the receiver’s HDMI OUT terminal, so connection with the TV can be completed with a single HDMI cable.

Network function   
AirPlay   
AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

For more information, see the Apple website (http://www.apple.com).

DLNA   
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.
vTuner
vTuner is a paid online database service that allows you to listen to radio and TV broadcasts on the Internet. vTuner lists thousands of stations from over 100 different countries around the globe. For more detail about vTuner, visit the following website: http://www.radio-pioneer.com

“*This product is protected by certain intellectual property rights of NEMS and BridgeCo. Use or distribution of such technology outside of this product is prohibited without a license from NEMS and BridgeCo or an authorized subsidiary.”*

Apple Lossless (ALAC)
*ALAC* stands for Apple Lossless Audio Codec. This is a lossless type audio codec and is used for example for iTunes®. It compresses non-compressed files (such as WAV and AIFF) to about one half the original size with no loss of sound quality.

FLAC (Free Lossless Audio Codec) is an audio format allows lossless codec. Audio is compressed in FLAC without any loss in quality. For more details about FLAC, visit the following website: http://flac.sourceforge.net/

Windows Media
Windows Media is a multimedia framework for media creation and distribution for Microsoft Windows. Windows Media is either a registered trademark or trademark of Microsoft Corporation in the U.S. and/or other countries. Use an application licensed by Microsoft Corporation to author, distribute, or play Windows Media formatted content. Using an application unauthorized by Microsoft Corporation is subject to malfunction.

Windows Media Player 11/Windows Media Player 12
Windows Media Player is software to deliver music, photos and movies from a Microsoft Windows computer to home stereo systems and TVs. With this software, you can play back files stored on the PC through various devices wherever you like in your home. This software can be downloaded from Microsoft’s website.
- Windows Media Player 11 (for Windows XP or Windows Vista)
- Windows Media Player 12 (for Windows 7 or Windows 8)
For more information check the official Microsoft website.

Router
A device for relaying data flowing on a network to another network. In homes, routers often also function as DHCP servers. Products with built-in wireless LAN access points are called “wireless LAN routers”.

DHCP
Abbreviation of Dynamic Host Configuration Protocol. A protocol for automatically assigning such setting information as IP addresses within network connections. This offers convenience in that, when enabled, it allows network functions to be used simply by connecting the devices to the network.

Wireless LAN/Wi-Fi
“Wi-Fi” (Wireless Fidelity) is a trademark coined by the Wi-Fi Alliance trade association to increase recognition of wireless LAN standards. With the increase in the number of devices connected to computers in recent years, Wi-Fi offers the advantage of eliminating the complexity of making connections with LAN cables by using wireless connection. As a way of reassuring users, products that have passed interoperability tests carry the logo “Wi-Fi Certified” to indicate that compatibility is assured.

WPS
Abbreviation of Wi-Fi Protected Setup. A standard established by the Wi-Fi Alliance industry group for a function allowing settings related to interconnection of WPS-compatible wireless LAN devices and encryption to be made with simple operations. There are a number of methods, including push-button configuration and PIN code configuration. This AV receiver supports both push-button configuration and PIN code configuration.

SSID
Abbreviation of Service Set Identifier. A wireless LAN access point identifier. Can be set as desired using up to 32 characters of English letters and numbers.

**Bluetooth function**

**Bluetooth wireless technology**
A short-range wireless communications standard for digital devices. Information is exchanged between devices several meters to several tens of meters apart using radio waves. It uses radio waves on the 2.4 GHz band which does not require applications for licenses or usage registration for applications conducting wireless exchange of digital information at relatively low speeds, such as computer mouses and keyboards, mobile phones, smartphones, text and audio information for PDAs, etc.

**Pairing**
“Pairing” must be done before you start playback of Bluetooth wireless technology content using the Bluetooth ADAPTER. Make sure to perform the first time you operate the system or any time pairing data is cleared. The pairing step is necessary to register the Bluetooth wireless technology device to enable Bluetooth communications. For more details, see also the operating instructions of your Bluetooth wireless technology device.
- Pairing is required when you first use the Bluetooth wireless technology device and Bluetooth ADAPTER.
- To enable Bluetooth communication, pairing should be done with both your system and Bluetooth wireless technology device.

**Receiver function**

**Operation Mode**
This receiver is equipped with a great number of functions and settings. The Operation Mode feature is provided for users who find it difficult to master all these functions and settings.

**MHL**
MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats.

“*This receiver incorporates MHL 2.”*

## Specifications

### Amplifier section
- **Multi channel simultaneous power output (1 kHz, 1 %, 8 Ω):** 760 W
- **Maximum power output (1 kHz, THD 10 %, 4 Ω, 1 ch Driven):** 320 W per channel
- **Rated power output (1 kHz, 4 Ω, 1 %, 1 ch Driven):** 240 W per channel
- **Rated power output (1 kHz, 6 Ω, 1 %, 1 ch Driven):** 190 W per channel
- **Total harmonic distortion:** 0.04 % (1 kHz, 110 W + 110 W, 8 Ω)
- **Guaranteed speaker impedance:** 4 Ω to 16 Ω

### Audio Section
- **Input (Sensitivity/Impedance):** LINE 390 mV/47 kΩ
- **Output (Level/Impedance):** REC 390 mV/2.2 kΩ
- **Signal-to-Noise Ratio (IHF, short circuited, A network):** LINE 101 dB

### Tuner Section
- **Frequency Range (FM):** 87.5 MHz to 108 MHz
- **Antenna Input (FM):** 75 Ω unbalanced
- **Frequency Range (AM):** 9 kHz step 531 kHz to 1 602 kHz
- **10 kHz step 530 kHz to 1 700 kHz**
- **Antenna (AM):** Loop antenna (balanced)

### Video Section
- **Signal level:**
  - Composite Video: 1 Vp-p (75 Ω)
  - Component Video: Y: 1.0 Vp-p (75 Ω), PB/PR: 0.7 Vp-p (75 Ω)
- **Corresponding maximum resolution:** 1080p (1125p)

### HDMI output type
- **5 V, 55 mA**

### Digital In/Out Section
- **HDMI terminal:** 19-pin (Not DVI)
- **HDMI output type:** 5 V, 55 mA
- **HDMI input/MHL terminal:** 5 V, 900 mA
- **USB terminal:** USB2.0 High Speed (Type A) 5 V, 1 A
- **iPod terminal:** USB ADAPTER PORT terminal 5 V, 100 mA
- **WIRELESS LAN ADAPTER terminal:** 5 V, 600 mA

### Integrated Control Section
- **Control (IR) terminal:** ø 3.5 Mini-jack (MONO)
- **IR signal:** High Active (High Level: 2.0 V)
- **12 V Trigger terminal:** ø 3.5 Mini-jack (MONO)
- **12 V Trigger output type:** 12 V, Total 150 mA
- **RS-232C cable type:** 9-pin, cross type, female-female

### Network Section
- **LAN terminal:** 10 BASE-T/100 BASE-TX

### Miscellaneous
- **Power requirements:** AC 220 V to 230 V / 240 V, 50 Hz/60 Hz
- **Power consumption:** 330 W
- **Auto power down:** 15 min, 30 min, 60 min. off (default)
- **Dimensions:** 435 mm (W) x 185 mm (H) x 441 mm (D)
- **Weight (without package):** 15.3 kg

### Number of Furnished Parts
- **MCACC Setup microphone:** 1
- **Remote control unit:** 1
- **AAA size IEC R03 dry cell batteries:** 2
- **AM loop antenna:** 1
- **FM wire antenna:** 1
- **Power cord:** 1
- **CD-ROM:** Quick start guide
- **Safety Brochure:**

You should have no problem controlling a component if you find the manufacturer in this list, but please note that we do not guarantee the operations of all the manufacturers and devices listed. Operation may not be possible even if a preset code is entered.

If you can't find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 86).
If operations are not possible using the preset codes below, you may be able to conduct operations with the preset codes for the BD. D VR (BDR, HDR).
