CAUTION
TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

Operating Environment
Operating environment temperature and humidity: +5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)
Do not install this unit in a poorly ventilated area, or in locations exposed to high humidity or direct sunlight (or strong artificial light).

VENTILATION CAUTION
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 40 cm at top, 20 cm at rear, and 20 cm at each side).

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table-cloths, curtains) or by operating the equipment on thick carpet or a bed.
Information for users on collection and disposal of old equipment and used batteries

These symbols on the products, packaging, and/or accompanying documents mean that used electrical and electronic products and batteries should not be mixed with general household waste.

For proper treatment, recovery and recycling of old products and used batteries, please take them to applicable collection points in accordance with your national legislation.

By disposing of these products and batteries correctly, you will help to save valuable resources and prevent any potential negative effects on human health and the environment which could otherwise arise from inappropriate waste handling.

For more information about collection and recycling of old products and batteries, please contact your local municipality, your waste disposal service or the point of sale where you purchased the items.

These symbols are only valid in the European Union.

For countries outside the European Union:
If you wish to discard these items, please contact your local authorities or dealer and ask for the correct method of disposal.

CAUTION
The STANDBY/ON switch on this unit will not completely shut off all power from the AC outlet. Since the power cord serves as the main disconnect device for the unit, you will need to unplug it from the AC outlet to shut down all power. Therefore, make sure the unit has been installed so that the power cord can be easily unplugged from the AC outlet in case of an accident. To avoid fire hazard, the power cord should also be unplugged from the AC outlet when left unused for a long period of time (for example, when on vacation).

WARNING
Store small parts out of the reach of children and infants. If accidentally swallowed, contact a doctor immediately.

This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.
# Contents

Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly.

Before you start

Checking what’s in the box
Please check that you’ve received the following supplied accessories:
• Remote control
• AAA size IEC R03 dry cell batteries (to confirm system operation) x2
• AM loop antenna
• FM wire antenna
• Quick start guide
• Safety Brochure

Installing the receiver
• When installing this unit, make sure to put it on a level and stable surface.
  Don’t install it on the following places:
  – on a color TV (the screen may distort)
  – near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
  – in direct sunlight
  – in damp or wet areas
  – in extremely hot or cold areas
  – in places where there is vibration or other movement
  – in places that are very dusty
  – in places that have hot fumes or oils (such as a kitchen)

Flow of settings on the receiver

The unit is a full-fledged AV receiver equipped with an abundance of functions and terminals. It can be used easily after following the procedure below to make the connections and settings.

The colors of the steps indicate the following:

Required setting item
Setting to be made as necessary

1 Connecting the speakers
Where you place the speakers will have a big effect on the sound.
• Placing the speakers (page 10)
• Connecting the speakers (page 11)

2 Connecting the components
For surround sound, you’ll want to hook up using a digital connection from the Blu-ray Disc/DVD player to the receiver.
• About video outputs connection (page 13)
• Connecting a TV and playback components (page 14)
• Connecting antennas (page 16)
• Plugging in the receiver (page 17)

3 Power On
Make sure you’ve set the video input on your TV to this receiver. Check the manual that came with the TV if you don’t know how to do this.

4 Making the initial settings according to the region and environment in which you live
• Changing the TV format setting of Graphical User Interface (page 26)
• Changing the frequency step of AM Radio (page 26)

5 Specify the size and number of speakers you’ve connected
• Speaker Setting (page 27)

6 The Input Assign menu (page 29)
(When using connections other than the recommended connections.)
The HDMI Setup menu (page 30)
(When the connected TV supports the HDMI Audio Return Channel function.)

7 Basic playback (page 18)
• Selecting the audio input signal (page 18)
• Playing a USB device (page 20)
• Choosing the listening mode (page 23)

8 Adjusting the sound as desired
• Using the Sound Retriever (page 24)
• Better sound using Phase Control (page 24)
• Setting the Audio options (page 24)
• Manual speaker setup (page 27)
Controls and displays

Front panel

1 INPUT SELECTOR dial
Selects an input source (page 18).

2 Receiver control buttons
- SPEAKERS – Use to change the speaker system on or off. When the SP OFF is selected, no sound is output from the speakers connected to this receiver.
- DIMMER –Dims or brightens the display. The brightness can be controlled in four steps.
- DISPLAY – Switches the display of this unit. The listening mode, sound volume, input name can be checked by selecting an input source.

3 Character display
See Display on page 7.

4 Tuner control buttons
- BAND – Switches between AM, FM ST (stereo) and FM MONO radio bands (page 21).
- TUNER EDIT – Use with TUNE ↑/↓, PRESET ←/→ and ENTER to memorize and name stations for recall (page 21).
- TUNE ↑/↓ – Used to find radio frequencies (page 21).

5 HDMI indicator
Blinks when connecting an HDMI-equipped component; lights when the component is connected (page 14).

6 Remote sensor
Receives the signals from the remote control (see Operating range of remote control on page 9).

7 MASTER VOLUME dial

8 STANDBY/ON

9 PHONES jack
Use to connect headphones. When the headphones are connected, there is no sound output from the speakers. The listening mode when the sound is heard from the headphone can be selected only from PHONES SURR, STEREO or STEREO ALC mode.

10 Listening mode buttons
- AUTO SURROUND/STREAM DIRECT – Switches between Auto surround mode (page 23) and Stream Direct playback (page 24).
- ALC/STANDARD Surr – Press for standard decoding and to switch between the modes of Pro Logic and NEO:6, and the Auto level control stereo mode (page 23).
- ADVANCED SURROUND – Switches between the various surround modes (page 23).

11 ECO
Switches between ECO Mode 1/ECO Mode 2. When ECO Mode is turned ON, the display will go dark (page 24).

12 SOUND RETRIEVER
Turn sound retriever effect on/off.

13 USB terminal
Use to connect your USB mass storage device as an audio source (page 17).
Display

14 PHASE
Lights when the Phase Control is switched on (page 24).

15 AUTO
Lights when the Auto Surround feature is switched on (page 23).

16 Tuner indicators
RDS – Lights when an RDS broadcast is received (page 22). (For Europe)
ST – Lights when a stereo FM broadcast is being received in auto stereo mode (page 21).
TUNE – Lights when a normal broadcast channel.
PRESET – Shows when a preset radio station is registered or called.
MEM – Blinks when a radio station is registered.
kHz/MHz – Lights when the character display is showing the currently received AM/FM broadcast frequency.

17 Speaker indicators
Shows if the speaker system is on or off (page 6).
SP  A means the speakers are switched on.
SP  means the speakers are switched off.

18 Sleep timer indicator
Lights when the receiver is in sleep mode (page 8).

19 PRESET information or input signal indicator
Shows the preset number of the tuner or the input signal type, etc.

20 Character display
Displays various system information.

21 DTS indicators
DTS – Lights when a source with DTS encoded audio signals is detected.
HD – Lights when a source with DTS-EXPRESS or DTS-HD encoded audio signals is detected.
96/24 – Lights when a source with DTS 96/24 encoded audio signals is detected.
NEO:6 – When one of the NEO:6 modes of the receiver is on, this lights to indicate NEO:6 processing (page 23).

22 Dolby Digital indicators
D – Lights when a Dolby Digital encoded signal is detected.
D+ – Lights when a source with Dolby Digital Plus encoded audio signals is detected.
HD – Lights when a source with Dolby TrueHD encoded audio signals is detected.
PLII – Lights to indicate Pro Logic II decoding (see Listening in surround sound on page 23 for more on this).

23 ADV.S.
Lights when one of the Advanced Surround modes has been selected (see Using the Advanced surround on page 23 for more on this).

24 SIGNAL SELECT indicators
DIGITAL – Lights when a digital audio signal is selected.
Lights when a digital audio signal is selected and selected audio input is not provided.

25 DIR.
Lights when the DIRECT or PURE DIRECT mode is switched on (page 24).

HDMI – Lights when an HDMI signal is selected. Blinks when an HDMI signal is selected and selected HDMI input is not provided.
Remote control

As for operating other devices, the remote control codes for the Pioneer products are preset. The settings cannot be changed.

1 SLEEP
Press to change the amount of time before the receiver switches into standby (30 min – 60 min – 90 min – Off). You can check the remaining sleep time at any time by pressing SLEEP once.

2 RECEIVER
Switches the receiver between standby and on.

3 RECEIVER
Switches the remote to control the receiver (used to select the white commands above the number buttons (MIDNIGHT, etc.). Also use this button to set up surround sound (page 27) or Audio parameters (page 24).

4 INPUT SELECT
Use to select the input source (page 18).

5 Input function buttons
Use to select the input source to this receiver (page 18). This will enable you to control other Pioneer components with the remote control.

BT – It is not used with this receiver.

6 SIG SEL
Press to select the audio input signal of the component to play back (page 18).

7 Sound control buttons
S.RETRIEVER – Press to restore CD quality sound to compressed audio sources (page 24).

PHASE – Press to switch on/off Phase Control (page 24).

8 Listening mode and component control buttons
AUTO/DIRECT – Switches between Auto surround mode (page 23) and Stream Direct playback (page 24).

STEREO – Press to select stereo playback (page 23).

ADV SURR – Switches between the various surround modes (page 23).

ECO – Switches between ECO Mode 1/ECO Mode 2. When ECO Mode is turned ON, the display will go dark (page 24).

9 Receiver and component control buttons
The following button controls can be accessed after you have selected the corresponding input function button (BD, DVD, etc.).

Press RECEIVER first to access:

AUDIO PARAMETER – Use to access the Audio options (page 24).

HOME MENU – Press to access the Home Menu (page 27).

RETURN – Confirm and exit the current menu screen.

Press BD or DVD first to access:

TOP MENU – Displays the disc ‘top’ menu of a Blu-ray Disc/DVD.

HOME MENU – Displays the HOME MENU screen.

RETURN – Confirm and exit the current menu screen.

MENU – Displays the TOOLS menu of Blu-ray Disc player.

Press TUNER first to access:

TOOLS – Memorizes stations for recall, also used to change the name (page 21).

BAND – Switches between AM, FM ST (stereo) and FM MONO radio bands (page 21).

Press USB first to access:

PTY – Use to search for RDS program types (page 22). (For Europe)

10 ↑/↓/←/→ (TUNE ↑/↓, PRESET ←/→), ENTER
Use the arrow buttons when setting up your surround sound system (page 27). Also used to control Blu-ray Disc/DVD menus/options.

Use TUNE ↑/↓ can be used to find radio frequencies and PRESET ←/→ can be used to select preset radio stations (page 21).
11 Component control buttons
The main buttons (►, ■, etc.) are used to control a component after you have selected it using the input function buttons. The controls above these buttons can be accessed after you have selected the corresponding input function button (BD, DVD and CD). These buttons also function as described below.

Press RECEIVER first to access:

- **BASS +/-, TRE +/-** – Use to adjust Bass or Treble.
  - These controls are disabled when the listening mode is set to **DIRECT** or **PURE DIRECT**.
  - When the front speaker is set at **SMALL** in the Speaker Setting and the X.Over is set above 150 Hz, the subwoofer channel level will be adjusted by pressing **BASS +/-** (page 28).

12 Number buttons and other component controls
Use the number buttons to directly select a radio frequency (page 21) or the tracks on a CD, etc. There are other buttons that can be accessed after **RECEIVER** is pressed. (For example **MIDNIGHT**, etc.)

- **CH SELECT** – Press repeatedly to select a channel, then use **LEV +/-** to adjust the level (page 26).
- **LEV +/-** – Use to adjust the channel level.
- **MIDNIGHT** – Switches to Midnight or Loudness listening (page 25).
- **SPEAKERS** – Use to change the speaker system on or off. When the SP OFF is selected, no sound is output from the speakers connected to this receiver.
- **DIMMER** – Dims or brightens the display. The brightness can be controlled in four steps.
  - During ECO mode, the brightness switches between 2 levels. If the dimmest level is selected, **DIMMER** will be shown on the display. (Mode other than ECO: 3 levels, ECO mode: 2 levels)

13 **SOURCE**
Turns on or off the power of the Pioneer DVD/DVR units when BD, DVD or CD is selected using the input function buttons.

14 **TV CONTROL** buttons
These buttons can control only be used with Pioneer TVs.

- **D** – Use to turn on/off the power of the TV.
- **INPUT** – Use to select the TV input signal.
- **CH +/-** – Use to select channels.
- **VOL +/-** – Use to adjust the volume on your TV.

15 **VOLUME +/-**
Use to set the listening volume.

16 **MUTE**
Mutes/unmutes the sound.

17 **DISP**
Switches the display of this unit. The listening mode, sound volume or input name can be checked by selecting an input source.

Loading the batteries

The batteries included with the unit are to check initial operations; they may not last over a long period. We recommend using alkaline batteries that have a longer life.

**WARNING**
- Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

**CAUTION**
- Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:
  - Never use new and old batteries together.
  - Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
  - Batteries with the same shape may have different voltages. Do not use different batteries together.

- When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country/area.
- When inserting the batteries, make sure not to damage the springs on the battery’s (–) terminals. This can cause batteries to leak or overheat.

Operating range of remote control
The remote control may not work properly if:

- There are obstacles between the remote control and the receiver’s remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.
Chapter 2

Connecting your equipment

**Placing the speakers**

By connecting the left and right front speakers (L/R), the center speaker (C), the left and right surround speakers (SL/SR), and the subwoofer (SW), a 5.1 ch surround system can be enjoyed. To achieve the best possible surround sound, install your speakers as shown below.

*5.1 channel surround system:*

**Hints on the speaker placement**

Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.

- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.
- For the best stereo effect, place the front speakers 2 m to 3 m apart, at equal distance from the TV.
- If you’re going to place speakers around your CRT TV, use shielded speakers or place the speakers at a sufficient distance from your CRT TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround speakers should be positioned 60 cm to 90 cm higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.
- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.

**CAUTION**

- Make sure that all speakers are securely installed. This not only improves sound quality, but also reduces the risk of damage or injury resulting from speakers being knocked over or falling in the event of external shocks such as earthquakes.
Connecting the speakers

The receiver will work with just two stereo speakers (the front speakers in the diagram) but using at least three speakers is recommended, and a complete setup is best for surround sound.

Make sure you connect the speaker on the right to the right (R) terminal and the speaker on the left to the left (L) terminal. Also make sure the positive and negative (+/-) terminals on the receiver match those on the speakers.

You can use speakers with a nominal impedance between 6 Ω and 16 Ω.

Be sure to complete all connections before connecting this unit to the AC power source.

Bare wire connections

1. Twist exposed wire strands together.
2. Push open the tabs and insert exposed wire.
3. Release the tabs.

CAUTION

- These speaker terminals carry HAZARDOUS LIVE voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.
Making cable connections

Make sure not to bend the cables over the top of this unit (as shown in the illustration). If this happens, the magnetic field produced by the transformers in this unit may cause a humming noise from the speakers.

Important
- Before making or changing connections, switch off the power and disconnect the power cord from the AC outlet.
- Before unplugging the power cord, switch the power into standby.

HDMI cables

Both video and sound signals can be transmitted simultaneously with one cable. If connecting the player and the TV via this receiver, for both connections, use HDMI cables.

Be careful to connect the terminal in the proper direction.

Note
- Set the HDMI parameter in Setting the Audio options on page 24 to THRU (THROUGH) and set the input signal in Selecting the audio input signal on page 18 to HDMI. If you want to hear HDMI audio output from your TV (no sound will be heard from this receiver).

About HDMI

The HDMI connection transfers uncompressed digital video, as well as almost every kind of digital audio that the connected component is compatible with, including DVD-Video, DVD-Audio, SACD, Dolby Digital Plus, Dolby TrueHD, DTS-HD Master Audio (see below for limitations), Video CD/ Super VCD and CD.

This receiver incorporates High-Definition Multimedia Interface (HDMI®) technology.

This receiver supports the functions described below through HDMI connections.
- Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
- 3D signal transfer
- Deep Color signal transfer
- x.v.Color signal transfer
- Audio Return Channel (see The HDMI Setup menu on page 30)
- Input of multi-channel linear PCM digital audio signals (192 kHz or less) for up to 8 channels
- Input of the following digital audio formats:
  - Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio), DVD-Audio, CD, SACD (DSD 2 ch only), Video CD, Super VCD
- 4K signal transfer
  - This may not operate properly, depending on the connected equipment.
  - 4K 24p, 4K 25p, 4K 30p, 4K 50p and 4K 60p signals are supported.

Note
- Use a High Speed HDMI® Cable. If HDMI cable other than a High Speed HDMI® Cable is used, it may not work properly.
- When an HDMI cable with a built-in equalizer is connected, it may not operate properly.
- 3D, Deep Color, x.v.Color, 4K signal transfer and Audio Return Channel are only possible when connected to a compatible component.
- HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
- Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/ connecting the HDMI cable during playback, may cause noise or interrupted audio.

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

"x.v.Color" and x.v.Color are trademarks of Sony Corporation.
**Analog audio cables**

Use stereo RCA phono cables to connect analog audio components. These cables are typically red and white, and you should connect the red plugs to R (right) terminals and white plugs to L (left) terminals.

**Digital audio cables**

Commercially available coaxial digital audio cables or optical cables should be used to connect digital components to this receiver.

- Coaxial digital audio cable
- Optical cable

**Standard RCA video cables**

These cables are the most common type of video connection and are used to connect to the composite video terminals. The yellow plugs distinguish them from cables for audio.

**Note**

- When connecting optical cables, be careful when inserting the plug not to damage the shutter protecting the optical socket.
- When storing optical cable, coil loosely. The cable may be damaged if bent around sharp corners.
- You can also use a standard RCA video cable for coaxial digital connections.

**About video outputs connection**

This receiver is not loaded with a video converter. When you use HDMI cables for connecting to the input device, the same cables should be used for connecting to the TV. The signals input from the analog (composite) video inputs of this unit will not be output from the HDMI OUT.

- Video signals can be output.
Connecting a TV and playback components

Connecting using HDMI
If you have an HDMI or DVI (with HDCP) equipped component (Blu-ray Disc player, etc.), you can connect it to this receiver using a commercially available HDMI cable.

- The following connection/setting is required to listen to the sound of the TV over this receiver.
  - If the TV does not support the HDMI Audio Return Channel function, connect the receiver and TV with audio cables (as shown).
  - If the TV supports the HDMI Audio Return Channel function, the sound of the TV is input to the receiver via the HDMI terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see The HDMI Setup menu on page 30).
  - Please refer to the TV’s operation manual for directions on connections and setup for the TV.

Important
- When the ARC function is ON and the receiver is connected to a compatible TV with an HDMI cable, and you switch the input of the TV to composite, the input of the receiver may automatically switch to TV. If this happens, switch the receiver’s input back to the original input, or turn OFF the ARC function (see The HDMI Setup menu on page 30).

Note
- In order to listen to the audio from the TV that is connected to this receiver using an analog audio cables, set-up for analog audio input is required (see The Input Assign menu, on page 29).

OSD can only be output from HDMI.
Connecting your component with no HDMI terminal

This diagram shows connections of a TV and DVD player (or other playback component) with no HDMI terminal to the receiver.

**Important**

- When the receiver and TV are connected by composite cable, the OSD function allowing display of the receiver’s settings, operations, etc., on the TV’s screen cannot be used. In this case, watch the receiver’s front panel display while performing the various operations and making settings.

**Note**

- You can only connect one component to the optical input terminal. If connecting other devices, please use a different method to connect the audio.

In order to listen to the audio from the source component that is connected to this receiver using an optical cable, first, switch to the **DVD (DVD player)** or **SAT/CBL (set-top box)**, then press **SIG SEL** to choose the audio signal **O1 (OPTICAL1)** (see Selecting the audio input signal on page 18).

- You can only connect one component to the coaxial input terminal. If connecting other devices, please use a different method to connect the audio.

In order to listen to the audio from the source component that is connected to this receiver using a coaxial cable, first, switch to the **DVD (DVD player)** or **SAT/CBL (set-top box)**, then press **SIG SEL** to choose the audio signal **C1 (COAXIAL1)** (see Selecting the audio input signal on page 18).
Connecting antennas
Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Using external antennas below).

1 Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
2 Fix the AM loop antenna to the attached stand. To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
3 Place the AM antenna on a flat surface and in a direction giving the best reception.
4 Connect the FM wire antenna into the FM antenna socket. For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.

Using external antennas
To improve FM reception
Use a PAL connector (not supplied) to connect an external FM antenna.

To improve AM reception
Connect a 5 m to 6 m length of vinyl-coated wire to the AM antenna terminal without disconnecting the supplied AM loop antenna. For the best possible reception, suspend horizontally outdoors.
Connecting a USB device

It is possible to listen to two-channel audio using the USB interface on the front of this receiver.

- Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.
  - It is not possible to connect an iPod/iPhone or a similar device to this receiver and play back music files.
  - This receiver does not support a USB hub.
  - For instructions on playing the USB device, see Playing a USB device on page 20.

Plugging in the receiver

Only plug in after you have connected all your components to this receiver, including the speakers.

- Plug the AC power cord into a convenient AC power outlet.

CAUTION

- Handle the power cord by the plug. Do not pull out the plug by tugging the cord and never touch the power cord when your hands are wet as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, etc., on the power cord, or pinch the cord. Never make a knot in the cord or tie it with other cords. The power cords should be routed such that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electrical shock. Check the power cord once in a while. When you find it damaged, ask your nearest PIONEER authorized service center or your dealer for a replacement.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.

Note

- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during this process. The HDMI indicator in the front panel display blinks during this process, and you can turn on this receiver once it has stopped blinking. When you set ARC at HDMI setup to OFF, you can skip this process. For details, see The HDMI Setup menu on page 30.
Basic playback

Playing a source
Here are the basic instructions for playing a source (such as a DVD disc) with your home theater system.

1 Switch on your system components and receiver.

   Start by switching on the playback component (for example a DVD player), your TV and subwoofer (if you have one), then the receiver (press RECEIVER).

2 Switch the TV input to the input that connects this receiver.

   For example, if you connected this receiver to the VIDEO jacks on your TV, make sure that the VIDEO input is now selected.

3 Press input function buttons to select the input function you want to play.

   • The input of the receiver will switch over, and you will be able to operate other components using the remote control. To operate the receiver, first press RECEIVER on the remote control, then press the appropriate button to operate.

   • The input source can also be selected by using INPUT SELECT buttons on the remote control, or by using the front panel INPUT SELECTOR dial. In this case, the remote control won’t switch operational modes.

4 Press AUTO/DIRECT to select ‘AUTO SURROUND’ and start playback of the source.

   If you’re playing a Dolby Digital or DTS surround sound DVD disc, with a digital audio connection, you should hear surround sound. If you’re playing a stereo source or if the connection is an analog audio connection, you will only hear sound from the front left/right speakers in the default listening mode.

   It is possible to check on the front panel display whether or not surround sound playback is being performed properly.

   If the display does not correspond to the input signal and listening mode, check the connections and settings.

5 Use VOLUME +/- to adjust the volume level.

   Turn down the volume of your TV so that all sound is coming from the speakers connected to this receiver.

Selecting the audio input signal
The audio input signal can be selected for each input source. Once it is set, the audio input that was selected will be applied whenever you select the input source using the input function buttons.

Press AUTO/DIRECT to select ‘AUTO SURROUND’ and start playback of the source.

   If you’re playing a Dolby Digital or DTS surround sound DVD disc, with a digital audio connection, you should hear surround sound. If you’re playing a stereo source or if the connection is an analog audio connection, you will only hear sound from the front left/right speakers in the default listening mode.

   It is possible to check on the front panel display whether or not surround sound playback is being performed properly.

   If the display does not correspond to the input signal and listening mode, check the connections and settings.

**Note**

• You may need to check the digital audio output settings on your DVD player or digital satellite receiver. It should be set to output Dolby Digital, DTS and 88.2 kHz/96 kHz PCM (2 channel) audio, and if there is an MPEG audio option, set this to convert the MPEG audio to PCM.

• Depending on your DVD player or source discs, you may only get digital 2 channel stereo and analog sound. In this case, the receiver must be set to a multichannel listening mode if you want multichannel surround sound.

• BD

• BD and GAME inputs are fixed to H (HDMI). It cannot be changed.

• For the TV input, only A (analog) or C1/O1 (digital) can be selected. However, if the ARC at HDMI Setup is set to ON, the input is fixed to H (HDMI) and cannot be changed.

• When set to H (HDMI) or C1/O1 (digital), DTS lights when a Dolby Digital signal is input, and DTS lights when a DTS signal is input.

• When the H (HDMI) is selected, the A and DIGITAL indicators are off (see page 7).

• When digital input (optical or coaxial) is selected, this receiver can only play back Dolby Digital, PCM (32 kHz to 96 kHz) and DTS (including DTS 96 kHz/24 bit) digital signal formats. The compatible signals via the HDMI terminals are: Dolby Digital, DTS, SACD (DSD 2 ch only), PCM (32 kHz to 192 kHz sampling frequencies), Dolby TrueHD, Dolby Digital Plus, DTS-EXPRESS, DTS-HD Master Audio and DVD Audio (including 192 kHz). With other digital signal formats, set to A (analog).

• You may get digital noise when a LD or CD player compatible with DTS is playing an analog signal. To prevent noise, make the proper digital connections (see page 13) and set the signal input to C1/O1 (digital).

Press SIG SEL to select the audio input signal corresponding to the source component.

Each press cycles through the following:

• H – Selects an HDMI signal. H can be selected for BD, DVD, SAT/CBL or GAME input. For other inputs, H cannot be selected.

• When the HDMI option in Setting the Audio options on page 24 is set to THRU, the sound will be heard through your TV, not from this receiver.

• A – Selects the analog inputs.

• C1/O1 – Selects the digital input. The coaxial 1 input is selected for C1, and the optical 1 audio input is selected for O1.

   When H (HDMI) or C1/O1 (digital) is selected and the selected audio input is not provided, A (analog) is automatically selected.

   **Note**

• You may get digital noise when a LD or CD player compatible with DTS is playing an analog signal. To prevent noise, make the proper digital connections (see page 13) and set the signal input to C1/O1 (digital).
- Some DVD players don't output DTS signals. For more details, refer to the instruction manual supplied with your DVD player.

<table>
<thead>

</tbody>
</table>

- The HDMI terminals can be used for the TV input by turning ON the ARC function in the HDMI setting (page 30).
- In order to listen to the audio from the TV that is connected to this receiver using analog audio cables, set-up for analog audio input is required (see the Input Assign menu, on page 29).

**Tip**
- In order to enjoy the picture and/or sound from devices connected to each terminal, select the input by doing the following.

1. **Audio**
   - (TV input)
   - Other than TV input

2. **Audio**
   - (CD) audio input terminal is assigned to CD under factory settings. If you want to change this to TV input, please change the settings in the Input Assign menu (page 29).
Playing a USB device
It is possible to listen to two-channel audio using the USB interface on the front of this receiver.

Important
• Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.

Note
• This includes playback of WMA/MP3/MPEG-4 AAC files (except files with copy-protection or restricted playback).
• Compatible USB devices include external magnetic hard drives, portable flash memory (particularly keydrives) and digital audio players (MP3 players) of format FAT16/32. It is not possible to connect this receiver to a computer for USB playback.
• With large amounts of data, it may take longer for the receiver to read the contents of a USB device.
• If the file selected cannot be played back, this receiver automatically skips to the next file playable.
• When the file currently being played back has no title assigned to it, the file name is displayed in the OSD instead; when neither the album name nor the artist name is present, the row is displayed as a blank space.
• Note that non-roman characters in the playlist are displayed as ‘*’.
• Make sure the receiver is in standby when disconnecting the USB device.

1 Switch on the receiver and your TV.
   See Connecting a USB device on page 17.
2 Switch the TV input so that it connects to the receiver.
   • Switch the TV input to the input that connects this receiver to the TV through the corresponding HDMI cable.
3 Press USB on the remote control to switch the receiver to the USB input.
   Loading appears in the OSD as this receiver starts recognizing the USB device connected. After the recognition, a playback screen appears in the OSD and playback starts automatically.

Basic playback controls
This receiver’s remote control buttons can be used for basic playback of files stored on USB devices.
• Press USB to switch the remote control to the USB operation mode.

Important
If a USB Error message lights in the display, try following the points below:
• Switch the receiver off, then on again.
• Reconnect the USB device with the receiver switched off.
• Select another input source (like BD), then switch back to USB.
• Use a dedicated AC adapter (supplied with the device) for USB power.

For more information on error messages, see USB messages on page 32.
If this doesn’t remedy the problem, it is likely your USB device is incompatible.

Compressed audio compatibility
Note that although most standard bit/sampling rate combinations for compressed audio are compatible, some irregularly encoded files may not play back. The list below shows compatible formats for compressed audio files:
• MP3 (MEG-1/2/2.5 Audio Layer 3) – Sampling rates: 32 kHz/44.1 kHz/48 kHz; Bit rates: 32 kbps to 320 kbps (128 kbps or higher recommended); File extension: .mp3
• WMA (Windows Media Audio) – Sampling rates: 32 kHz/44.1 kHz/48 kHz; Bit rates: 48 kbps to 192 kbps (128 kbps or higher recommended); File extension: .wma; WMA9 Pro and WMA lossless encoding: No
• AAC (MPEG-4 Advanced Audio Coding) – Sampling rates: 32 kHz/44.1 kHz/48 kHz; Bit rates: 16 kbps to 320 kbps (128 kbps or higher recommended); File extension: .m4a; Apple lossless encoding: No

Other compatibility information
• VBR (variable bit rate) MP3/WMA/MPEG-4 AAC playback: Yes (Note that in some cases playback time will not be displayed correctly.)
• Copyrighted audio files cannot be played back on this receiver.
• DRM-protected audio files cannot be played back on this receiver.

About MPEG-4 AAC
Advanced Audio Coding (AAC) is at the core of the MPEG-4 AAC standard, which incorporates MPEG-2 AAC, forming the basis of the MPEG-4 audio compression technology. The file format and extension used depend on the application used to encode the AAC file. This receiver plays back AAC files encoded by iTunes® bearing the extension’.m4a’. DRM-protected files will not play, and files encoded with some versions of iTunes® may not play.
Apple and iTunes are trademarks of Apple Inc., registered in the U.S. and other countries.

About WMA
WMA is an acronym for Windows Media Audio and refers to an audio compression technology developed by Microsoft Corporation. This receiver plays back WMA files encoded using Windows Media® Player bearing the extension ‘.wma’. Note that DRM-protected files will not play, and files encoded with some versions of Windows Media® Player may not play.
Listening to the radio
The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. Once you are tuned to a station you can memorize the frequency for recall later—see Saving station presets below for more on how to do this.

1 Press TUNER to select the tuner.
2 Use BAND to change the band (FM or AM), if necessary.
   Each press switches the band between FM (stereo or mono) and AM.
3 Tune to a station.
   There are three ways to do this:
   - **Automatic tuning**
     To search for stations in the currently selected band, press and hold TUNE ↑/↓ for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.
   - **Manual tuning**
     To change the frequency one step at a time, press TUNE ↑/↓.
   - **High speed tuning**
     Press and hold TUNE ↑/↓ for high speed tuning.

Improving FM sound
If the TUNE or ST indicators don’t light when tuning to an FM station because the signal is weak, set the receiver to the mono reception mode.

   - Press BAND to select FM MONO.
     This should improve the sound quality and allow you to enjoy the broadcast.

Listening to station presets
You will need to have some presets stored to do this. See Saving station presets above if you haven’t done this already.

   - Press PRESET ←/→ to select the station preset you want.
     - You can also use the number buttons on the remote control to recall the station preset.

Naming preset stations
For easier identification, you can name all of your preset stations.

1 Choose the station preset you want to name.
   See Listening to station presets above for how to do this.
2 Press TOOLS twice.
   The cursor at the first character position is blinking on the display.
3 Input the name you want.
   Choose a name up to eight characters long.
   - Use PRESET ←/→ to select character position.
   - Use TUNE ↑/↓ to select characters.
   - The name is stored when ENTER is pressed.
4 Press ENTER.
   The preset number stop blinking and the receiver stores the station.

Tip
- To erase a station name, follow steps 1 and 2, and press ENTER while the display is blank. Press TOOLS while the display is blank, to keep the previous name.
- Once you have named a station preset, Press DISP to show the name. When you want to return to the frequency display, press DISP several times to show the frequency.

Saving station presets
If you often listen to a particular radio station, it’s convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This unit can memorize up to 30 stations.

1 Tune to a station you want to memorize.
   See Listening to the radio above for more on this.
2 Press TOOLS.
   The display shows PRESET, then a blinking MEM and station preset.
3 Press PRESET ←/→ to select the station preset you want.
   You can also use the number buttons.
4 Press ENTER.
   The preset number stop blinking and the receiver stores the station.

Note
- If the receiver is left disconnected from the AC power outlet for over a month, the station memories will be lost and will have to be reprogrammed.
- Stations are stored in stereo. When the station is stored in the FM MONO mode, it shows as ST when recalled.
An introduction to RDS (For Europe)

Radio Data System (RDS) is a system used by most FM radio stations to provide listeners with various kinds of information—the name of the station and the kind of show they're broadcasting, for example.

One feature of RDS is that you can search by type of program. For example, you can search for a station that’s broadcasting a show with the program type, JAZZ.

You can search the following program types:

- NEWS – News
- AFFAIRS – Current Affairs
- INFO – General Information
- SPORT – Sport
- EDUCATE – Educational
- DRAMA – Radio plays, etc.
- CULTURE – National or regional culture, theater, etc.
- SCIENCE – Science and technology
- VARIED – Usually talk-based material, such as quiz shows or interviews.
- POP M – Pop music
- ROCK M – Rock music
- EASY M – Easy listening
- LIGHT M – 'Light' classical music
- CLASSICS – ‘Serious’ classical music
- OTHER M – Music not fitting above categories
- WEATHER – Weather reports
- FINANCE – Stock market reports, commerce, trading, etc.
- CHILDREN – Programs for children
- SOCIAL – Social affairs
- RELIGION – Programs concerning religion
- PHONE IN – Public expressing their views by phone
- TRAVEL – Holiday-type travel rather than traffic announcements
- LEISURE – Leisure interests and hobbies
- JAZZ – Jazz
- COUNTRY – Country music
- NATION M – Popular music in a language other than English
- OLDIES – Popular music from the ’50s and ’60s
- FOLK M – Folk music
- DOCUMENT – Documentary

### Note

In addition, there are three other program types, ALARM, ALARMST, and NO TYPE. ALARM and ALARMST are used for emergency announcements. NO TYPE appears when a program type cannot be found.

### Searching for RDS programs

You can search for a program type listed above.

1. Press TUNER then press BAND to select the FM band.
   - RDS is only possible in the FM band.
2. Press PTY.
   - SEARCH shows in the display.
3. Press PRESET ↔ to select the program type you want to hear.
4. Press ENTER to search for the program type.
   - The system starts searching through the station presets for a match, stopping when it was found one. Repeat to search for other stations.
   - If NO PTY is displayed it means the tuner couldn’t find that program type at the time of the search.
   - RDS searches station presets only. If no stations have been preset, or if the program type could not be found among the station presets NO PTY is displayed.
   - FINISH means the search is complete.

### Displaying RDS information

Use the DISP button to display the different types of RDS information available.

#### Press DISP for RDS information.

Each press changes the display as follows:

- Listening mode
- Master volume
- Radio Text (RT) – Messages sent by the radio station.
- For example, a talk radio station may provide a phone number as RT.
- Program Service Name (PS) – The name of the radio station.
- Program Type (PTY) – This indicates the kind of program currently being broadcast.
- Current tuner frequency (FREQ)

#### Note

- If any noise is picked up while displaying the RT scroll, some characters may be displayed incorrectly.
- If you see NO TEXT in the RT display, it means no RT data is sent from the broadcast station. The display will automatically switch to the PS data display (if no PS data, NO NAME is displayed).
- In the PTY display, NO PTY may be shown.
Choosing the listening mode

This receiver offers a variety of listening modes to accommodate playback of various audio formats. Choose one according to your speaker environment or the source.

While listening to a source, press the listening mode button repeatedly to select a listening mode you want.

- The listening mode is shown on the display on the front panel.

Important
- The listening modes and many features described in this section may not be available depending on the current source, settings and status of the receiver.

Auto playback

The simplest, most direct listening option is the AUTO SURROUND feature. With this, the receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.

- Press AUTO/DIRECT repeatedly until AUTO SURROUND shows briefly in the display (it will then show the decoding or playback format). Check the digital format indicators in the display to see how the source is being processed.

Note
- Stereo surround (matrix) formats are decoded accordingly using NEO:6 CINEMA (see Listening in surround sound below for more on these decoding formats).

Listening in surround sound

Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you’re listening to.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shown in the display.

When you select STEREO ALC (Auto Level Control stereo mode), this unit equalizes playback sound levels if each sound level varies with the music source recorded in a portable audio player.

When you select STEREO, you will hear the source through just the front left and right speakers (and possibly your subwoofer depending on your speaker settings). Dolby Digital and DTS multichannel sources are downmixed to stereo. The following modes provide basic surround sound for stereo and multichannel sources.

Explanatory notes
No: No connected / Yes: Connected / Two: Two speakers are connected / ~: Whether connected or no

| F.S.S.Advance          | Allows you to create natural surround sound effects using just the front speakers and the subwoofer.  
  Use to provide a rich surround sound effect directed to the center of where the front left and right speakers sound projection area converges. |

Front left speaker  
Front right speaker

PHONES SURR When listening through headphones, you can still get the effect of overall surround.
**ECO MODE 1**
Cut back on power consumption. Suitable for contents that are mainly high level (mainly music).

**ECO MODE 2**
Cut back on even more power consumption than ECO MODE 1. Suitable for contents with wider dynamic range (mainly movies).

**Note**
- During ECO mode, the brightness switches between 2 levels. If the dimmest level is selected, DIMMER will be shown on the display. (Mode other than ECO: 3 levels, ECO mode: 2 levels)
- ECO MODE will switch OFF automatically when switched to other listening modes (Advanced surround mode and Auto surround mode).

**Using Stream Direct**
Use the Stream Direct modes when you want to hear the truest possible reproduction of a source. All unnecessary signal processing is bypassed.

**AUTO SURROUND**
See Auto playback on page 23.

**DIRECT**
Sources are heard according to the settings made in the Manual SP Setup (speaker setting, channel level, speaker distance), as well as with dual mono settings. You will hear sources according to the number of channels in the signal.
Phase Control, Sound Delay, Auto Delay, LFE Attenuate and Center image functions are available.

**PURE DIRECT**
Analog and PCM sources are heard without any digital processing.

**Using the Sound Retriever**
When audio data is removed during the compression process, sound quality often suffers from an uneven sound image. The Sound Retriever feature employs new DSP technology that helps bring CD quality sound back to compressed 2-channel audio by restoring sound pressure and smoothing jagged artifacts left over after compression.

Press S.RETRIEVER to switch the S.RTV (Sound Retriever) ON or OFF.

**Note**
- The Sound Retriever is only applicable to 2-channel sources.

**Better sound using Phase Control**
This receiver’s Phase Control feature uses phase correction measures to make sure your sound source arrives at the listening position in phase, preventing unwanted distortion and/or coloring of the sound.
Phase Control technology provides coherent sound reproduction through the use of phase matching for an optimal sound image at your listening position. The default setting is on and we recommend leaving Phase Control switched on for all sound sources.

Press PHASE to switch the P.CTL (Phase Control) ON or OFF.

**Note**
- Phase matching is a very important factor in achieving proper sound reproduction. If two waveforms are ‘in phase’, they crest and trough together, resulting in increased amplitude, clarity and presence of the sound signal. If a crest of a wave meets a trough, then the sound will be ‘out of phase’ and an unreliable sound image will be produced.
- If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0°). However, the effect you can actually feel when Phase Control is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.
- Set the built-in lowpass filter switch of your subwoofer to OFF. If this cannot be done on your subwoofer, set the cutoff frequency to a higher value.
- If the speaker distance is not properly set, you may not have a maximized Phase Control effect.
- The Phase Control mode cannot be set to ON in the following cases:
  - When the PURE DIRECT mode is switched on.
  - When the headphones are connected.

**Setting the Audio options**
There are a number of additional sound settings you can make using the AUDIO PARAMETER menu. The defaults, if not stated, are listed in bold.

**Important**
- Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.

1. Press RECEIVER, then press AUDIO PARAMETER button.
2. Use †/ ‡ to select the setting you want to adjust.
   Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
Use ↵ to set it as necessary.
See the table below for the options available for each setting.

Press RETURN to confirm and exit the menu.

- a. You can change the MIDNIGHT/LOUDNESS options at any time by using MIDNIGHT button.
- b. You can change the Sound Retriever feature at any time by using S.RETRIEVER button.
- c. The default setting when the USB input is selected is OFF.
- d. This setting works only with dual mono encoded Dolby Digital and DTS soundtracks.
- e. The initial set AUTO is only available for Dolby TrueHD signals. Select MAX or MID for signals other than Dolby TrueHD.
- f. You shouldn’t have any problems using this with most SACD discs, but if the sound distorts, it is best to switch the gain setting back to 0 dB.
- g. This feature is only available when the connected display supports the automatic audio/video synchronizing capability (‘lip-sync’) for HDMI. If you find the automatically set delay time unsuitable, set A.DLY to OFF and adjust the delay time manually. For more details about the lip-sync feature of your display, contact the manufacturer directly.
- h. Only available with 2-channel sources in NE0:6 CINEMA.
- i. Only when listening to 2-channel sources in NE0:6 CINEMA and NE0:6 MUSIC.
Listening to your system

* The functions that can be set differ depending on the input signal or speaker settings.

**Changing the TV format setting of Graphical User Interface**

If the Graphical User Interface screen is not displayed correctly, it may be that the TV system is set incorrectly for your country or region.

1. Switch the receiver into standby.
2. While holding down TUNE † on the front panel, press STANDBY/ON.
   Each press switches between PAL and NTSC.
   • Default: PAL

**Changing the frequency step of AM Radio**

If you find that you can’t tune into stations successfully, the frequency step may not be suitable for your country/region. Here’s how to switch the setting:

1. Switch the receiver into standby.
2. While holding down TUNE ¶ on the front panel, press STANDBY/ON.
   Each press switches between 9K STEP and 10K STEP.
   • Default: 9K STEP
Using the Home Menu
The following section shows you how to make detailed settings to specify how you’re using the receiver, and also explains how to fine-tune individual speaker system settings to your liking.

Important
- The OSD will not appear if you have connected using the composite output to your TV. Use HDMI connections for Home Menu.
- If headphones are connected to the receiver, disconnect them.
- You can’t use the Home Menu when the USB input is selected.

1 Switch on the receiver and your TV.
Press RECEIVER to switch on.

2 Switch the TV input to the input that connects this receiver to the TV through the corresponding HDMI cable.

3 Press RECEIVER, then press HOME MENU.
The Home Menu appears on your TV. Use ↑/↓/←/→ and ENTER on the remote control to navigate through the screens and select menu items. Press RETURN to exit the current menu.
- Press HOME MENU at any time to exit the Home Menu.

4 Select the setting you want to adjust.
- **Manual SP Setup**
  - **Speaker Setting** – Specify the size and number of speakers you’ve connected (see below).
  - **X.Over** – Specify which frequencies will be sent to the subwoofer (page 28).
  - **Channel Level** – Adjust the overall balance of your speaker system (page 28).
  - **Speaker Distance** – Specify the distance of your speakers from the listening position (page 29).

- **Input Assign** – Specify what you’ve connected to the (CD) audio input (see The Input Assign menu on page 29).

- **Auto Power Down** – Sets to automatically turn off the power when the receiver has not operated for several hours (see The Auto Power Down menu on page 29).

- **HDMI Setup** – Set the audio return channel function and set the HDMI input signal to Standby Through output or not during standby (see The HDMI Setup menu on page 30).

Manual speaker setup
This receiver allows you to make detailed settings to optimize the surround sound performance. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

Speaker Setting
Use this setting to specify your speaker configuration (size, number of speakers).

1 Select ‘Manual SP Setup’ from the Home Menu.

2 Select ‘Speaker Setting’ from the Manual SP Setup menu.

3 Choose the set of speakers that you want to set then select a speaker size.
Use ←/→ to select the size (and number) of each of the following speakers:
- **Front** – Select LARGE if your front speakers reproduce bass frequencies effectively, or if you didn’t connect a subwoofer. Select SMALL to send the bass frequencies to the subwoofer.
- **Center** – Select LARGE if your center speaker reproduces bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a center speaker, choose NO (the center channel is sent to the other speakers).
- **Surr** – Select LARGE if your surround speakers reproduce bass frequencies effectively. Select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround speakers choose NO (the sound of the surround channels is sent to the other speakers).
• **Subwoofer** – LFE signals and bass frequencies of channels set to SMALL are output from the subwoofer when YES is selected (see notes below). Choose the PLUS setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are also routed to the subwoofer). If you did not connect a subwoofer choose NO (the bass frequencies are output from other speakers).

4 When you’re finished, press RETURN. You return to the Manual SP Setup menu.

**Note**
- If you select SMALL for the front speakers, the subwoofer will automatically be fixed to YES. Also, the center, surround can’t be set to LARGE if the front speakers are set to SMALL. In this case, all bass frequencies are sent to the subwoofer.
- If you have a subwoofer and like lots of bass, it may seem logical to select LARGE for your front speakers and PLUS for the subwoofer. This may not, however, yield the best bass results. Depending on the speaker placement of your room you may actually experience a decrease in the amount of bass due to low frequency cancellations. In this case, try changing the position or direction of speakers. If you can’t get good results, listen to the bass response with it set to PLUS and YES or the front speakers set to LARGE and SMALL alternatively and let your ears judge which sounds best. If you’re having problems, the easiest option is to route all the bass sounds to the subwoofer by selecting SMALL for the front speakers.

### X.Over
- **Default setting**: 100Hz
  This setting decides the cutoff between bass sounds playing back from the speakers selected as LARGE, or the subwoofer, and bass sounds playing back from those selected as SMALL. It also decides where the cutoff will be for bass sounds in the LFE channel.
  - For more on selecting the speaker sizes, see Speaker Setting on page 27.

1 Select ‘Manual SP Setup’ from the Home Menu.
2 Select ‘X.Over’ from the Manual SP Setup menu.
3 Choose the frequency cutoff point.
   Frequencies below the cutoff point will be sent to the subwoofer (or LARGE speakers).
4 When you’re finished, press RETURN. You return to the Manual SP Setup menu.

### Channel Level
Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

**CAUTION**
- The test tones used in the Channel Level settings are output at high volume.

1 Select ‘Manual SP Setup’ from the Home Menu.
2 Select ‘Channel Level’ from the Manual SP Setup menu.
3 Select a setup option.
   - Manual – Move the test tone manually from speaker to speaker and adjust individual channel levels.
   - Auto – Adjust channel levels as the test tone moves from speaker to speaker automatically.
4 Confirm your selected setup option.
   The test tones will start after you press ENTER. After the volume increases to the reference level, test tones will be output.

5 Adjust the level of each channel using ↑/↓.
If you selected Manual, use ↑/↓ to switch speakers. The Auto setup will output test tones in the order shown on-screen:

Adjust the level of each speaker as the test tone is emitted.
Note
• If you are using a Sound Pressure Level (SPL) meter, take the readings from your main listening position and adjust the level of each speaker to 75 dB SPL (C-weighting/slow reading).
• The subwoofer test tone is output at low volumes. You may need to adjust the level after testing with an actual soundtrack.

6 When you’re finished, press RETURN.
You return to the Manual SP Setup menu.

Tip
• You can change the channel levels at any time by press 
  CH SELECT and LEV +/– on the remote control. You can also press CH SELECT and use ↑/↓ to select the channel, and then use ←/→ to adjust the channel levels.

Speaker Distance
For good sound depth from your system, you need to specify the distance of your speakers from the listening position. The receiver can then add the proper delay needed for effective surround sound.
• For the assignment of the digital signal inputs, see Selecting the audio input signal on page 18.

1 Select ‘Manual SP Setup’ from the Home Menu.
2 Select ‘Speaker Distance’ from the Manual SP Setup menu.

3 Adjust the distance of each speaker using ←/→.
You can adjust the distance of each speaker in 0.03 m increments.

4 When you’re finished, press RETURN.
You return to the Manual SP Setup menu.

The Input Assign menu
(CD) audio input terminal is assigned to CD under factory settings, but this can be changed to TV input.

1 Select ‘Input Assign’ from the Home Menu.
2 Select ‘Analog Input’ from the Input Assign menu.
3 Select the desired input option for the (CD) audio input terminal.
4 When you’re finished, press RETURN.
You return to the Input Assign menu.

The Auto Power Down menu
Set to automatically turn off the receiver after a specified time has passed (when the power has been on with no operation for several hours).
• Default setting: 6H

1 Select ‘Auto Power Down’ from the Home Menu.
2 Specify the amount of time to allow before the power is turned off (when there has been no operation).
  • You can select 2, 4 or 6 hours, or OFF (if no automatic shutoff is desired).
3 When you’re finished, press RETURN.
You return to the Home Menu.
The HDMI Setup menu
If your TV supports an audio return channel (ARC) function, connect your TV and this unit with an HDMI cable and the TV audio will be inputted into this unit via the HDMI terminal without the need for an audio cable to be connected. It is possible to transfer signals from an HDMI connected player to the TV even when this receiver’s power is on standby.

Important
• Use a High Speed HDMI®/™ Cable when using the ARC function. The ARC function may not operate properly with other HDMI cables.

1 Select ‘HDMI Setup’ from the Home Menu.

2 Choose the ‘ARC’ setting you want. When a TV supporting the HDMI Audio Return Channel function is connected to the receiver, the sound of the TV can be input via the HDMI terminal.
• ON – The TV’s sound is input via the HDMI terminal.
• OFF – The TV’s sound is input from the audio input terminals other than HDMI inputs.

3 Choose the ‘Standby Through’ setting you want. When the receiver is in standby, the HDMI input signal selected here will be output to the TV by HDMI.
• LAST – The HDMI input signal selected previously will be output.
• BD, DVD, SAT/CBL, GAME – The HDMI input signal selected here will be output.
• OFF – Signal will not be output during standby.
  • If the Standby Through setting is not set to OFF, the power consumption during standby will increase.

4 Choose the ‘4k60p Setting’ setting you want. If the TV to be connected using HDMI supports 4K/60p, you can switch the 4k60p setting in accordance with TV performance.
  1. Select an input terminal that you wish to change settings using ←/→.
  2. Use ↑/↓ to select ‘4k60p’.
  3. Use ←/→ to select the signal to set.
    • 4:4:4 – Select this setting when connecting to a 4K/60p 4:4:4 24 bit compatible TV using HDMI. More high quality video images can be enjoyed.
      - When the HDMI cable does not support 4K/60p 4:4:4 24 bit (18 Gbps transmission), video image may not be output properly.
        In that case, set 4:2:0 to watch a 4K/60p 4:2:0 24 bit video image.
    • 4:2:0 – Select this setting when connecting to a 4K/60p 4:2:0 24 bit compatible TV using HDMI.
      If certain source devices that do not support 4K/60p 4:4:4 24 bit are used and the HDMI terminal is set to 4:4:4, video output from the source device may turn red, no audio may be output by the source device, or a 3D signal may not be output by some of the devices. In these cases, set the HDMI terminal to 4:2:0.

5 When you’re finished, press RETURN. You return to the Home Menu.

Before starting ARC operation
When starting ARC operation, put the TV and this unit in STANDBY mode after connecting this unit with the TV. Next, turn ON the power of this unit and then the TV, in this order. In order to start ARC operation, after connecting this unit to a TV with an HDMI cable, you will need to switch the input on the TV to the input mode required to connect to this unit. Then, you can select a TV program.

Important
• The ARC function may not operate even if the above conditions are met. If this is the case, listen to the TV audio after connecting this unit and the TV with an audio cable.

• The CEC (Consumer Electronic Control) function may activate when the ARC function is turned ON, causing power to turn ON and OFF and the input to switch from one to another. Since this unit does not guarantee synchronized operation based on the CEC function, we recommend that you turn OFF the HDMI CONTROL setting on the connected player. This unit may not operate properly if the HDMI CONTROL on the player is ON. Refer to the relevant device’s instruction manual for details. If this does not work, turn OFF the ARC function.
  • Turn OFF the power and remove the power cord from the wall socket when connecting other devices or making connection changes to this unit. After all connections are completed, insert the power cord into the wall socket.
  • If the power cord is connected when the ARC function is ON, the HDMI will take 2 to 10 seconds to initialize. This unit cannot be operated during the initialization. During initialization, the HDMI indicator on the display will blink. Turn ON the unit after blinking stops.
Troubleshooting

Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Take a look at the other components and electrical appliances being used, because sometimes the problem may lie there. If the trouble isn’t sorted out even after going through the checks below, ask your nearest Pioneer authorized independent service company to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.

General

- The power does not turn on.
  → Disconnect the power plug from the outlet, and insert again.
- The receiver suddenly switches off.
  → When the Auto Power Down function is working, the power will automatically turn off if the receiver has not operated for several hours. Check the setting for the Auto Power Down function (see The Auto Power Down menu on page 29).
- Make sure there are no loose strands of speaker wire touching the rear panel. This could cause the receiver to shut off automatically.
- After about a minute (you won’t be able to switch the unit on during this time), switch the receiver back on. If the message persists, call a Pioneer authorized independent service company.
- If there is very little low frequency information in the source material, change your speaker settings to Front: SMALL / Subwoofer: YES, or Front: LARGE / Subwoofer: PLUS (page 27).
- The HDMI indicator blinks and the power does not turn on.
  → The receiver may have a serious problem. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.
- Power automatically turns ON/OFF and the input switches from one to another. (When the ARC function is ON)
  → The CEC (Consumer Electronic Control) function may activate when the ARC function is turned ON, causing power to turn ON and OFF and the input to switch from one to another. Since this unit does not guarantee synchronized operation based on the CEC function, turn OFF the HDMI CONTROL setting on the connected player. Refer to the relevant device’s instruction manual for details.
  → If this does not work, turn OFF the ARC function. If this is the case, listen to the TV audio after connecting this unit and the TV with an audio cable.
- OVERHEAT shows in the display and the power turns off.
  → The temperature within the unit has exceeded the allowable value. Try moving the unit for better ventilation (page 2).
  → Lower the volume level.
- TEMP shows in the display and the volume level drops.
  → The temperature within the unit has exceeded the allowable value. Try moving the unit for better ventilation (page 2).
  → Lower the volume level.
- No sound is output when an input function is selected.
  → Use VOLUME +/- to turn up the volume.
  → Press MUTE on the remote control to turn muting off.
  → Set the SIG SEL to H (HDMI), C1/O1 (digital) or A (analog) according to the type of connections made (page 18).
  → Make sure the component is connected correctly (see Connecting your equipment on page 10).
  → Check the audio output settings of the source component.
  → Refer to the instruction manual supplied with the source component.
- No image is output when an input function is selected.
  → Use the same type of video cables for the source component and TV to connect to this receiver (see About video outputs connection on page 13).
  → The video input selected on the TV monitor is incorrect. Refer to the instruction manual supplied with the TV.
- No sound from subwoofer.
  → Make sure the subwoofer is switched on.
  → If the subwoofer has a volume knob, make sure it’s turned up.
  → The Dolby Digital or DTS source you are listening to may not be decoded correctly (when DTS is played back).
  → Make sure the speaker cable is connected correctly. (Ensure that the connection terminal is correct, that the speaker wire is firmly inserted, and that no speaker wire is touching the rear panel.)
  → The Phase Control feature doesn’t seem to have an audible effect.
  → If applicable, check that the lowpass filter switch on your subwoofer is off, or the lowpass cutoff is set to the highest frequency setting. If there is a PHASE setting on your subwoofer, set it to 0° (or depending on the subwoofer, the setting where you think it has the best overall effect on the sound).
  → Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 29).
- Considerable noise in radio broadcasts.
  → Connect the antenna (page 16) and adjust the position for best reception.
  → Route any loose cables away from the antenna terminals and wires.
  → Fully extend the FM wire antenna, position for best reception, and secure to a wall (or connect an outdoor FM antenna).
  → Connect an additional internal or external AM antenna (page 16).
  → Turn off equipment causing interference or move it away from the receiver (or move antennas farther away from equipment causing noise).
- Broadcast stations cannot be selected automatically.
  → Connect an outdoor antenna (page 16).
- Noise during playback of a cassette deck.
  → Move the cassette deck away from your receiver, until the noise disappears.
- No sound is output or a noise is output when software with DTS is played back.
  → Make sure the player’s settings are correct and/or the DTS signal out is on. Refer to the instruction manual supplied with the DVD player.
- Can’t operate the remote control.
  → Replace the batteries (page 9).
  → Operate within 7 m, 30º of the remote sensor (page 9).
  → Remove the obstacle or operate from another position.
  → Avoid exposing the remote sensor on the front panel to direct light.
  → Press the remote control’s RECEIVER button and switch to receiver control mode.
- No sound from a specific speaker.
  → Make sure the speaker cable is connected correctly. (Ensure that the connection terminal is correct, that the speaker wire is firmly inserted, and that no speaker wire is touching the rear panel.)
In order to operate TUNER and USB functions, first press the TUNER or USB button before operating.

- **The display is dark.**
  - Press DIMMER on the remote control repeatedly to return to the default.
  - During ECO mode, the brightness switches between 2 levels. If the dimmest level is selected, DIMMER will be shown on the display. (Mode other than ECO: 3 levels, ECO mode: 2 levels)

- **Display flashes and cannot be operated.**
  - Depending on the input signal or listening mode, there may be functions that cannot be selected.

**HDMI**

- **No picture or sound.**
  - If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.
  - **No picture.**
  - Video signals that are input from the analog video terminal will not output from the HDMI terminal. Signals that are input from the HDMI terminal will not output from the analog video terminal. Be consistent with the type of cable between input and output.
  - Depending in the output settings of the source component, it may be outputting a video format that can’t be displayed. Change the output settings of the source, or connect using the composite video jacks.
  - This receiver is HDCP-compatible. Check that the components you are connecting are also HDCP-compatible. If they are not, please connect them using the composite video jacks.
  - Depending on the connected source component, it’s possible that it will not work with this receiver (even if it is HDCP-compatible). In this case, connect using the composite video jacks between source and receiver.
  - If video images do not appear on your TV, try adjusting the resolution, Deep Color or other setting for your component.
  - To output signals in Deep Color, use an HDMI cable (High Speed HDMI®/™ Cable) to connect this receiver to a component or TV with the Deep Color feature.

- **The OSD screen (Home Menu, etc.) isn’t displayed.**
  - The OSD will not appear if you have connected using the composite output to your TV. Use HDMI connections when setting up the system.

- **No sound, or sound suddenly ceases.**
  - Check that the HDMI setting is set to AMP (page 24).
  - If the component is a DVI device, use a separate connection for the audio.
  - HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
  - Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

**Important information regarding the HDMI connection**

There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI equipped component you are connecting-check with the manufacturer for HDMI compatibility information). If you aren’t receiving HDMI signals properly through this receiver (from your component), please try the following configuration when connecting up.

**Configuration**

Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

**Note**

- Depending on the component, audio output may be limited to the number of channels available from the connected display unit (for example audio output is reduced to 2 channels for a monitor with stereo audio limitations).
- If you want to switch the input source, you’ll have to switch functions on both the receiver and your display unit.
- Since the sound is muted on the display when using the HDMI connection, you must adjust the volume on the display every time you switch input sources.

**USB messages**

- **‘USB Error 1 (I/U ERR1)’**
  - There is a problem with the signal path from the USB to the receiver. Switch off the receiver and reconnect the USB to the receiver.
- **‘USB Error 3 (I/U ERR3)’**
  - When there is no response from the USB. Switch off the receiver and reconnect the USB to the receiver.
- **‘USB Error 4 (I/U ERR4)’**
  - The power requirements of the USB device are too high for this receiver. Switch off the receiver and reconnect the USB to the receiver.
Resetting the main unit
Use this procedure to reset all the receiver’s settings to the factory default. Use the front panel controls to do this.

1 Switch the receiver into standby.
2 While holding down BAND, press and hold STANDBY/ON for about two seconds.
3 When you see RESET? appear in the display, press AUTO SURROUND/STREAM DIRECT. OK? shows in the display.
4 Press ALC/STANDARD SURR to confirm. OK appears in the display to indicate that the receiver has been reset to the factory default settings.

Important
• If the ARC function is ON, you may not be able to initialize the unit. If this happens, turn OFF the ARC function or turn OFF all the connected device before turning OFF (STANDBY) the power for this unit, and initialize after the HDMI indicator goes out.
• If the Standby Through is not set to OFF, you may not be able to initialize the unit.

Cleaning the unit
• Use a polishing cloth or dry cloth to wipe off dust and dirt.
• When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
• Never use thinners, benzine, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.

Specifications

Preamble
The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software -- to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original author's reputation.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

These terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION
0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The “Program”, below, refers to any such program or work, and a “work based on the Program” means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

   a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
   b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program (or any portion of it) to be licensed as a whole at no charge to all third parties under the terms of this License.
   c) If the modified program normally runs in a shell session with the shell user's prompt visible, then it must prompt the user before, while, and after running it.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

   a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above.
   b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above.
   c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed as part of the copyrighted program need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such
If you distribute the Program, including modified versions, under this License, indicate the version of this License under which you distribute the Program. If you distribute modified versions, state that you do so on a voluntary basis and explain the changes you made.

An important side condition of the General Public License is that the source code of the program is available. For many programs it is not possible to provide the source code in a usable form. This problem is solved by a separate license for the library, which is free software distributed under the GNU Lesser General Public License. This license allows for the distribution of a library with proprietary software. This option is often used for applications that are written in the C programming language. The user of such an application can choose whether to use the free or the proprietary version of the application by selecting the appropriate version when starting the program.

The General Public License allows for the creation of derivative works, i.e., programs that are based on the original program. This is done by the deposit of the source code of the derivative work in a repository. This ensures that the source code of the original program is available for the creation of new versions.

The General Public License also requires that the license of the derivative work is compatible with the license of the original program. This means that the derivative work cannot hinder the distribution of the original program.

These conditions are intended to ensure that the free software distribution system is not disrupted by proprietary software. The General Public License is designed to protect the integrity of the free software distribution system and to ensure that users have the freedom to use and distribute software in a way that is consistent with the goals of the free software movement.

The General Public License is a way to distribute software in a way that respects the rights of the author and the users. It is designed to ensure that users have the freedom to use and distribute software in a way that is consistent with the goals of the free software movement.
