The Basic Manual includes information needed when starting up and also instructions for frequently used operations. The Advanced Manual has more detailed information and advanced settings.
What’s in the box
1. Main unit  2. Remote controller (RC-914R) ×1, Batteries (AAA/R03) ×2  
3. Indoor FM antenna ×1  4. AM loop antenna ×1  5. Speaker setup microphone ×1  
6. Power cord ×1

Main features
This unit features a Direct Energy HD Amplifier (Class D amplifier) that was developed using the latest digital amplifier technology. It is capable of simultaneous high-power output and very high quality sound. This amplifier provides you with the optimum playback of the latest multi-channel digital content.

- You can connect 7.1ch of speakers to this unit, with 7ch at 180 W (6 ohms, 1 kHz, 0.9%THD) (North American models) / 180 W (6 ohms, 1 kHz, 1%THD) (European and Asian models) per channel plus pre out jack for powered subwoofer.
- Supports playback in Dolby Atmos format which provides 360° sound placement
- The HDMI jack supports 4K video input and output. Jacks IN1 to 3 and OUT MAIN/SUB support HDCP2.2
- HDMI CEC functionality: Control features such as linking input switching with the input selector and players conforming to the CEC standard, switching audio output and volume using the remote controller of a CEC-compliant TV, and automatically switching this unit to standby when the TV is turned off
- HDMI Standby Through: Video and audio signals from AV components can be transmitted to the TV even if this unit is in standby
- ARC: Connection with an ARC-compatible TV is complete with one HDMI cable
- Easy Initial Setup using onscreen guidance and On-Screen Display (OSD) showing operations on the TV
- Internet radio and AirPlay via wired LAN or Wi-Fi (wireless LAN) and network features such as Music Server that enables PC music file playback, USB playback, plus other playback features such as AM/FM radio and BLUETOOTH® play
- Playback formats supported by Music Server and USB include WAV, FLAC and DSD high-res source
- Multi-zone Connection which allows you to play in the main room and listen in a separate room (ZONE 2)
- You can connect a speaker B system
- Equipped with RS-232C port, IR IN/OUT jack, and 12V TRIGGER OUT jacks
- We plan to provide support for the DTS:X audio format through a firmware update for this unit. Refer to our website for more information.

CAUTION: Connect speakers with 4 Ω to 16 Ω impedance. The power cord must be connected only after all other cable connections are completed.
- We will not accept responsibility for damage arising from the connection of equipment manufactured by other companies.
Step1: Choose your Speaker Layout

**For 5.1-Channel System**

This is a 5.1-channel system that is the basic surround system. Front speakers output front stereo sound and a center speaker outputs center sound such as dialogs and vocals. Surround speakers create back sound field. Powered subwoofer reproduces bass sounds and creates rich sound field. The front speakers should be positioned at ear height, while the surround speakers should be positioned just above ear height. Center speaker should be set up facing the listening position. Place the powered subwoofer towards the front. Placing it between the center speaker and a front speaker gives you a natural sound even when playing music.

- The front speakers, center speaker, and surround speakers are counted as 5 channels, and the powered subwoofer is counted as 0.1 of a channel, giving us the name 5.1ch system.

Go To “Hookup” (P9)

**Speaker B System**

In a 5.1-Channel System, you can connect one more set of front speakers to use as a Speaker B System. In this state, the 5.1-Channel System becomes the Speaker A System and you can switch the same audio to output from A, B, or A+B. Note that sound is not output from Speaker B when Zone Speaker is used (P18).

Go To “Hookup” (P9)
For 7.1-Channel System (with Surround Back Speakers)

This is a system with surround back speakers added to the basic 5.1-channel system. The connection of surround back speakers improves the sense of envelopment and connectivity of sound created by the back sound field and provides a more real sound field. You can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D surround sound, when the input format is Dolby Atmos. With formats other than Dolby Atmos, you can still create a sound field by outputting sound from the surround back speakers when you select the Dolby Surround listening mode. The optimal positioning is for surround back speakers to be at ear height. Place the surround speakers in a more slightly forward position than you would in a 5.1-channel system.

- If you are including surround back speakers in the setup, surround speakers are required.

Go To "Hookup" (⇒P9)

Speaker B System

In a 7.1-Channel System (with Surround Back Speakers), you can connect one more set of front speakers to use as a Speaker B System. In this state, the 7.1-Channel System becomes the Speaker A System and you can switch the same audio to output from A, B, or A+B. Note that sound is not output from the surround back speaker when A+B is selected. Note that sound is not output from Speaker B when Zone Speaker is used (⇒P16).

Go To "Hookup" (⇒P9)
For 7.1-Channel System (with Height Speaker-A)

**Front High or Rear High speakers**
This is a basic 5.1-channel system with the addition of height speakers, either as front high speakers or rear high speakers. Select which speakers to setup according to the environment of the room. You can select the Dolby Atmos listening mode (5.1.2 channel playback), which realizes the most up-to-date 3D surround sound including overhead sounds, when the input format is Dolby Atmos. With formats other than Dolby Atmos, you can still create a sound field by outputting sound from the height speakers when you select the Dolby Surround listening mode. Front high speakers or rear high speakers should be situated at least 0.9 m higher than the front speakers. Front high speakers should be situated directly above the front speakers and the distance between the rear high speakers should match the distance between the front speakers. Both should be set up facing the listening position.

Go To "Hookup" (P10)

---

Choose one of the following:
- Front High Speakers
- Rear High Speakers
Choose one of the following:

- Top Front Speakers
- Top Middle Speakers
- Top Rear Speakers

**Ceiling speakers**

This is a basic 5.1-channel system using ceiling speakers, for example, with the addition of height speakers, either as top front speakers, top middle speakers, or top rear speakers. Select which speakers to setup according to the environment of the room. You can select the Dolby Atmos listening mode (5.1.2 channel playback), which realizes the most up-to-date 3D surround sound including overhead sounds, when the input format is Dolby Atmos. With formats other than Dolby Atmos, you can still create a sound field by outputting sound from the height speakers when you select the Dolby Surround listening mode. Fit top front speakers on the ceiling forward of the seating position, top middle speakers on the ceiling directly above the seating position, and top rear speakers on the ceiling behind the seating position. The distance between each pair should match the distance between the two front speakers.

- Dolby Laboratories recommends placing this type of height speakers to obtain the best Dolby Atmos effect.

Go To “Hookup” (➔P10)
For 7.1-Channel System (with Height Speakers-C)

Dolby enabled speakers
This is a basic 5.1-channel system that using Dolby enabled speakers, with the addition of height speakers, either as Dolby enabled speakers (front) or Dolby enabled speakers (surround) or Dolby enabled speakers (surround back). Select which speakers to setup according to the environment of the room. Dolby enabled speakers are special speakers designed to face the ceiling so that sound is heard after bouncing off the ceiling so that sound appears to be coming from overhead. You can select the Dolby Atmos listening mode (5.1.2 channel playback), which realizes the most up-to-date 3D surround sound including overhead sounds, when the input format is Dolby Atmos. With formats other than Dolby Atmos, you can still create a sound field by outputting sound from the height speakers when you select the Dolby Surround listening mode. Place them either above the front speakers or above the surround speakers or surround back speakers.

Go To "Hookup" (P10)

* 1: 22° to 30°, * 2: 90° to 120°, * 3: 135° to 150°

1 – 6 (P3)

9, 10 Height Speakers
Choose one of the following:
• Dolby Enabled Speakers (Front)
• Dolby Enabled Speakers (Surround)
• Dolby Enabled Speakers (Surround Back)
For Bi-Amping the Speakers

It is possible to connect front speakers supporting Bi-Amping to improve quality of the bass and treble. The maximum number of channels available with this connection is 5.1 because Bi-Amping speakers require one amplifier for the tweeter jacks and one amplifier for the woofer jacks. The effects and placements for speakers are the same as the 5.1-channel plan that doesn't use Bi-Amping speakers.

Go To "Hookup" (P11)
Step 2: Connect the Speakers

Connect 1, 2, 3, 4 for a 5.1-channel system. With a 7.1-Channel System (with Surround Back Speakers), also connect 7 and 8. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER jacks. With this connection, you can connect one more set of front speakers to use as a Speaker B System. Switch Speakers A/B with "Speakers" in AV Adjust (P26). Note that sound is not output from the surround back speaker when A+B is selected.

Settings for the speaker configuration you have connected need to be made in "1. Full Auto MCACC" (P20) in Initial Setup.

Make sure the exposed wires of the speakers do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.

1 Speaker cable, 2 Subwoofer cable
Connect 1, 2, 3, 4, 5, 6. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER jacks.

- Apart from these connections, you can also connect surround back speakers 7 and 8. However, you can only output audio from one set of 7 or 8 at a time. When you have connected both, you can select which speakers to prioritize with “Speakers” (P26) in the AV Adjust.

Settings for the speaker configuration you have connected need to be made in “1. Full Auto MCACC” (P20) in Initial Setup. Note that if you are using height speakers, set “Speaker Channels” to “5.1.2 ch” in the setting screen. Select “7.1.2 ch” if you have connected both surround back speakers and height speakers.

Make sure the exposed wires of the speakers do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.
Connect front speakers compatible with Bi-Amping connection to the FRONT jacks and the SURROUND BACK jacks. Make sure you remove the jumper bar fitted between the woofer jacks and tweeter jacks of the front speakers. In case of Bi-Amping connection, refer to the instruction manual of your speakers. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER jacks.

**Setup**

- Bi-Amping connection requires you to change some settings. Select "Yes" in "Bi-Amp" in "1. Full Auto MCACC" (P20) in the Initial Setup.

Make sure the exposed wires of the speakers do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.
Step 3: Connect the TV

**if you have:**

ARC TV

This unit is connected between your TV and AV components. If you connect two or more AV components, you can select the video displayed on the TV and the audio output from this unit by changing the input selector. Shown here are the connections for a TV that supports the ARC (Audio Return Channel) feature. By connecting with a single HDMI cable, you can not only output the video input to this unit to the TV, but you can also play the sound from the TV through this unit.

Choose an HDMI IN jack on the TV that supports ARC when connecting.

**Setup**

- Settings are required to use the ARC function. Select "Yes" in "5. Audio Return Channel" (P21) in the Initial Setup.
- Please refer to the TV’s operation manual for directions on connections and setup for the TV.

Another TV or projector can be connected to the HDMI OUT SUB jack. This jack does not support ARC. For details about how to output video from the HDMI OUT SUB jack (P22).
if you have: Non-ARC TV

This unit is connected between your TV and AV components. If you connect two or more AV components, you can select the video displayed on the TV and the audio output from this unit by changing the input selector. This describes the connections for a TV that does not support the ARC (Audio Return Channel) feature. By connecting with both an HDMI cable and a digital optical cable, you can not only output the video input to this unit to the TV, but you can also play the sound from the TV through this unit.

- Connection with a digital optical cable is not necessary if you will watch TV through a device such as a cable set-top box (that is, not use a tuner built into the TV) that you have connected to the INPUT jack on this unit.

Another TV or projector can be connected to the HDMI OUT SUB jack. This jack does not support ARC. For details about how to output video from the HDMI OUT SUB jack (⇒P22)
Step 4: Connect the AV Components

If you have:

HDMI AV Components

This is an example of connection with an AV component that has an HDMI jack. With connection to an AV component that conforms with the CEC (Consumer Electronics Control) standard, you can use features such as the HDMI CEC feature that links with the input selector, and the HDMI Standby Through feature which allows you to play video and audio from AV components on the TV even when this unit is in standby mode.

- To play 4K or 1080p video, use a high speed HDMI cable. Further, to enjoy HDCP2.2 compatible video, connect to the HDMI IN1 to IN3 jacks.

Setup

- HDMI setup (P21) is required to use the HDMI CEC and HDMI Standby Through features. Make settings after all connections are complete.
- To enjoy digital surround sound including Dolby Digital, audio output should be set to "Bitstream output" on the connected Blu-ray Disc player or other device.

You can connect a device such as a video camera to the AUX INPUT HDMI jack on the front panel.
if you have:
Non-HDMI AV Components

This is an example of connection with an AV component that does not have an HDMI jack. Make the connections to the AV component to match the jacks it has. When video input connection is to the BD/DVD jack, the audio input connection should also be to the BD/DVD jacks, and so on, so that you connect the video input jacks to the jacks with the same name as the audio input jacks. Note that video signals input to the VIDEO IN jack or the COMPONENT VIDEO IN jacks will be converted to HDMI video signals and then output from the HDMI OUT jack.

- To enjoy digital surround playback in formats such as Dolby Digital, you need to make a connection for audio signals with a digital coaxial cable or digital optical cable.
- It is possible to change assignment of the input jacks you see in the illustration at left, so you can also connect to any jack other than BD/DVD. For details, see the Advanced Manual.

Setup
- The COMPONENT VIDEO IN jacks are compatible only with 480i or 576i resolution. When you input video signals to the COMPONENT VIDEO IN jacks, set the output resolution of the player to 480i or 576i. Select interlace if there is no option for 480i, etc. If your player does not support 480i or 576i output, use the VIDEO IN jack.
- To enjoy digital surround sound including Dolby Digital, audio output should be set to “Bitstream output” on the connected Blu-ray Disc Player or other device.
if you have:
Audio Components

Example of a connection with an audio component. Connect a CD player using a digital coaxial cable or analog audio cable. You can also connect a turntable that has an MM-type cartridge to the PHONO jack.

- If the turntable has a built-in audio equalizer, connect it to an AUDIO IN jack other than the PHONO jack.
- Further, if the turntable uses an MC type cartridge, install an audio equalizer compatible with the MC type cartridge between the unit and the turntable, then connect to any AUDIO IN jack other than the PHONO jack.

If the turntable has a ground wire, connect it to the SIGNAL GND terminal of this unit.

1 Digital coaxial cable, 2 Analog audio cable
Step 5: Multi-zone Connection

If you connect:

ZONE 2 TV

You can enjoy content from a Blu-ray Disc player on a TV equipped with an HDMI input jack in the separate room (ZONE 2) by playing a Blu-ray Disc player in the main room (where this unit is located), or play the content from another AV component. Only the video from devices connected to the HDMI IN1 to IN3 jacks can be played on the TV in the separate room.

Setup

- Settings are required in Initial Setup, “4. Multi Zone Setup” (P21) to enjoy this feature.
- The audio from externally connected AV components can only be played in ZONE 2 when the audio is analog or 2ch PCM audio. It may also be necessary to convert the audio output of the AV component to PCM output.
ZONE 2 PRE/LINE OUT / ZONE SPEAKER

You can enjoy audio in the separate room by, for example, playing a Blu-ray Disc player in the main room (where this unit is located) and listening to internet radio in the separate room (ZONE 2).

Connections with an AV component
Connect with HDMI IN 1 to 3 if you want to output an external AV component to ZONE 2. If the AV component doesn’t have an HDMI jack, connect using a digital optical cable, digital coaxial cable, or analog audio cable.

ZONE 2 PRE/LINE OUT
It is possible to play 2 ch source in a separate room while 7.1 ch source is being played in the main room. Connect the ZONE 2 PRE/LINE OUT jacks of the unit and the LINE IN jacks of the pre-main amplifier or the power amplifier in a separate room with an analog audio cable.

ZONE SPEAKER
It is possible to connect speakers in a separate room and play 2 ch sources.
• During ZONE 2 playback, no sound is heard from the surround back speakers or the height speakers and a maximum of 5.1 channel playback is possible in the main room. Listening modes such as the Dolby Atmos modes cannot be selected.
• Note that sound is not output from Speaker B when Zone Speaker is used.

Setup
• Settings are required in Initial Setup, “4. Multi Zone Setup” (P21) to enjoy this feature.
• The audio from externally connected AV components can only be played in ZONE 2 when the audio is analog or 2ch PCM audio. If you have connected to this unit with an HDMI cable or digital optical/coaxial cable, it may be necessary to convert the audio output of the AV component to PCM output.

1 Analog audio cable, 2 Speaker cable
Step 6: Connect Other Cables

Antenna Hookup
Move the antenna around while playing the radio to find the position with the best reception. Use a thumb tack or similar to attach the indoor FM antenna to a wall.

Network Hookup
Connect this unit to the network using wired LAN or Wi-Fi (wireless LAN). You can enjoy network features such as internet radio, Music Server, and AirPlay by connecting the unit to the network.
If you connect by wired LAN, connect with an Ethernet cable to the NETWORK port as shown in the illustration. To connect by Wi-Fi, then after selecting "Wireless" in "3. Network Connection" (P21) in Initial Setup, select the desired setting method and follow the onscreen instructions to configure the connection.

Power Cord Hookup
This unit includes removable power cords. Connect the power cord to the power outlet after completing all other connections. Connect the power cord to AC IN of the unit and then connect to the outlet. Always disconnect the outlet side first when disconnecting the power cord.
You can find the voltage selector switch on the rear panel of multi-voltage models. Please set it to the correct voltage for your country or region. Before changing the voltage, disconnect the power cord. Use a medium size screwdriver to change the voltage switch.
Step 7: Power On & Initial Setup

Initial Setup starts automatically
Once all connections are complete, change the TV’s input to the input for this unit, insert batteries in the remote controller, and press $\text{POWER}$ to turn the power on. When you turn the unit on for the first time, Initial Setup is automatically shown on the TV to enable you to make settings required for startup using simple operations following onscreen guidance.

These instructions will guide you through some items that you need to check beforehand. Read beforehand so the setup goes smoothly.

Operation
Select the item with the cursors of the remote controller and press ENTER (a). To return to the previous screen, press $\uparrow$ (b).

To redo the Initial Setup
If you terminate the procedure on the way or want to change a setting made during Initial Setup, press $\text{EXIT}$ on the remote controller, select “System Setup” – “Miscellaneous” – “Initial Setup” from Home, and press ENTER.

1. Full Auto MCACC

Place the supplied speaker setup microphone in the listening position, measure the test tones emitted by the speakers, then the unit automatically sets the optimum volume level for each speaker, the crossover frequencies, and the distance from the listening position. This also enables correction of distortion caused by the acoustic environment of the room.

- When putting the speaker setup microphone on a tripod, refer to the illustration when putting it in place.
- The subwoofer sound may not be detected since it is extremely low frequencies. Set the subwoofer volume to more than halfway.
- Calibration takes several minutes to be completed. The speakers emit the test tone at high volume during measurement, so be careful of your surroundings. Keep the room as quiet as possible during measurement. If the measurement is interrupted, turn off the household appliances.
2. Source Connection
Check that each input source is connected correctly. Follow the guidance, select the input you want to confirm, start play of the selected player, and confirm that the images appear on the TV and that sound is played.

3. Network Connection
Set up Wi-Fi connection with an access point such as a wireless LAN router. There are the following two methods of connecting by Wi-Fi.  
"Scan Networks": Search for an access point from this unit. Find out the SSID of the access point beforehand.  
"Use iOS Device (iOS7 or later)": Share the iOS device's Wi-Fi settings with this unit.
If you select "Scan Networks", there are a further two choices of connection method. Check the following.  
• "Enter Password": Enter the password (or key) of the access point to connect.  
• "Push Button": If the access point has an automatic connection button, you can connect without entering a password.  
If the SSID of the access point is not displayed, then in the screen listing the SSIDs, select "Other..." with the cursor on the remote controller and press ENTER, then follow the onscreen instructions.

Keyboard input

To switch between upper and lower case, select "A/a" on the screen and press ENTER. To select whether to mask the password with "*" or display it in plain text, press +Fav on the remote controller. Press CLEAR to delete all the input characters.  
• A confirmation screen asking you to agree to the privacy policy is displayed during network setting. Select "Yes" and press ENTER to indicate agreement.

4. Multi Zone Setup
Make these settings to enjoy video and audio in a room other than the main room (ZONE 2). Select "Using AV Receiver" when connecting speakers in the separate room. Select "with External Pre-main Amplifier" when connecting a pre-main amplifier in the separate room. Select "with External Power Amplifier" when connecting a power amplifier.  
If you are going to be connecting a TV in the separate room (ZONE 2), then when "Would you be using TV in 2nd room?" is displayed, select "Yes".

5. Audio Return Channel
If you have connected a TV that supports ARC, select "Yes". This unit's ARC setting turns on and you can listen to the TV's audio through this unit.  
• If you select "Yes", the HDMI CEC function is enabled and power consumption increases during standby.

HDMI Setup

HDMI CEC
Make this setting to enable the control feature for devices complying with the CEC standard. This is set to on automatically if you have selected "Yes" in "5. Audio Return Channel" in the Initial Setup. Press the button on the remote controller to set "System Setup" – "Hardware" – "HDMI" – "HDMI CEC" to "On" on the TV screen. Also enable the CEC control feature on the CEC device you have connected.

HDMI Standby Through
Even if this unit is in standby, the input signals from AV components are transmitted to the TV.  
• "Auto" / "Auto (Eco)": Select one of these settings when connected AV components comply with the CEC standard. Irrespective of the input selector selected immediately before switching the unit to standby, you can transmit the input signals from AV components to the TV. Select "Auto (Eco)" if the TV is also CEC-compliant. You can reduce power consumption in standby mode.  
• Input selector names for "BD/DVD", etc.: You can transmit the input signals from the set input selector to the TV. It can be selected when "HDMI CEC" is set to "Off".  
• "Last": You can transfer the input signals of the input selector selected immediately prior to the unit being switched to standby. It can be selected when "HDMI CEC" is set to "Off".
To exit the settings, press .
### Basic Playback

#### AV Component Playback

1. Switch the input on the TV to that assigned to the unit.
2. Press the input selector (a) on the remote controller with the same name as the jack to which you connected the player to switch the input. For example, press BD/DVD to play the player connected to the BD/DVD jack.
3. Press TV to listen the TV's sound. For equipment connected to the STRM BOX, AUX, or PHONO jacks, press the buttons to switch input.
4. When the CEC link function works, the input switches automatically when you have connected a CEC compliant TV and player to this unit using HDMI connection.
5. Start play on the player.
6. Use VOL+/– (b) to adjust the volume.

#### Listening Mode

This unit is equipped with a variety of listening modes. For details on the listening modes, see the Advanced Manual. This section introduces some of the popular modes.

- **AUTO/DIRECT button (c)**
  
  Press repeatedly and the listening modes suited to the input signal are switched between "Auto Surround", "Direct", and "Pure Direct". After selecting one of them, "Auto Surround" (or "Direct" or "Pure Direct") is displayed on the display of the main unit, then the listening mode selected automatically (Dolby Digital for multi-channel input signals, Stereo for 2 channel input signals, etc.) is displayed.
  
  The "Direct" mode shuts down some processing that can affect sound quality, such as the tone control features, so you can enjoy even better sound quality. The "Pure Direct" mode shuts down even more processes that affects sound quality, so you get a more faithful reproduction of the original sound. In this case, the speaker calibration made with MCACC is disabled.
  
  Depending on the input signal and speaker configuration, the Dolby Surround and DTS Neural:X modes that expand 2 channel and 5.1 channel input signals to 5.1 or 7.1 channels may be automatically selected.

- **SURR button (d)**
  
  You can select a variety of listening modes to suit your taste. There are the Dolby Digital, DTS-HD Master Audio, and Stereo modes that you can choose to suit the input signal, or the Dolby Surround and DTS Neural:X modes that can expand 2 channel and 5.1 channel input signals to 5.1 or 7.1 channels. You can also enjoy original surround modes such as Ext.Stereo and Drama modes.

- **STEREO button (e)**
  
  You can select the "Stereo" mode to playback only from the front speakers and subwoofer.

- **Input source & volume**

  - BD/DVD -42.0
  - Dolby D
  - Dolby D 5.1
  - The display changes few seconds later.
  - fs: 48kHz
  - 1080p: 16:9

A future firmware update is planned to enable this unit to support playback in DTS Neural:X audio format. Neo:6 Cinema and Neo:6 Music are available until an update.
Network Functions

Network Services
1. Switch the input on the TV to that assigned to the unit.
2. Press NET to display the network service list screen.
3. Select the item with the cursors of the remote controller and press ENTER to confirm your selection (a). To return to the previous screen, press \ (b).

Internet Radio
When this unit is connected to a network, you can listen to TuneIn or other preregistered Internet radio services. After selecting the desired service, follow the on-screen instructions, using the cursors to select radio stations and programs, then press ENTER to play. Play starts when 100% is displayed for buffering.

Music Server
You can play music files stored on home-network compliant PCs or NAS devices connected to the same network as this unit. Select the server with the cursors, select the desired music file and press ENTER to start playback. Play starts when 100% is displayed for buffering.

Notes:
- Network services become selectable after the network starts up even if they cannot be selected first.
- Functionality may be introduced by firmware updates and service providers may cease services, meaning that some network services and content may become unavailable in the future. Furthermore, available services may vary depending on your area of residence.

USB
Play music files on a USB storage device. After connecting the USB storage device to the USB port on the front of unit, press USB on the remote controller. Select the desired folder or music file with the cursors of the remote controller and press ENTER to confirm and start playback.
- Operation cannot be guaranteed for all USB storage devices.
- This unit can use USB storage devices that comply with the USB mass storage device class standard. The unit is also compatible with USB storage devices using the FAT16 or FAT32 file system formats.

Player 11 or 12 network servers or NAS that are compatible with home network functionality. You may need to make some settings in advance to use Windows Media® Player 11 or 12. Enable media streaming for this player in Windows Media® Player. For details, see the Advanced Manual.
AirPlay

You can wirelessly enjoy the music files on an iPhone®, iPod touch®, or iPad® connected to the same access point as this unit.
- Update the OS version on your iOS device to the latest version.
1. Connect the iOS device to the access point.
2. Press NET.
3. Tap the AirPlay icon in the control center of the iOS device and select this unit from the list of devices displayed, and tap "Done".
4. Play the music files on the iOS device.
- The default status is for the Network Standby feature to be on, so when you do steps 3 and 4 above, this unit automatically comes on and input switches to "NET". To reduce the amount of power consumed in standby mode, press the button on the remote controller, then in the Home displayed set "System Setup" – "Hardware" – "Power Management" – "Network Standby" to "Off".
- Due to the characteristics of AirPlay wireless technology, the sound produced on this unit may slightly be behind the sound played on the AirPlay-enabled device.

You can also play back music files on the computer with iTunes (Ver. 10.2 or later). Before operation, make sure this unit and the PC are connected to the same network, then press NET on this unit. Next, click the AirPlay icon in iTunes, select this unit from the list of devices displayed, and start play of a music file.

BLUETOOTH® Playback

Pairing
1. When you press BT AUDIO on the remote controller, "Now Pairing..." is displayed on this unit's display, and the pairing mode is enabled.

2. Enable (turn on) the BLUETOOTH function of the BLUETOOTH enabled device, then select this unit from amongst the devices displayed. If a password is requested, enter "0000".
- To connect another BLUETOOTH enabled device, press and hold BT AUDIO until "Now Pairing..." is displayed, then perform step 2 above. This unit can store the data of up to 8 paired devices.
- The coverage area is 48 feet (15 meters). Note that connection is not always guaranteed with all BLUETOOTH enabled devices.

Playing Back
1. When the unit is on, connect the BLUETOOTH enabled device.
2. The input selector of this unit will be automatically switched to "BT AUDIO".
3. Play music. Increase the volume of the BLUETOOTH enabled device to an appropriate level.
- Due to the characteristics of BLUETOOTH wireless technology, the sound produced on this unit may slightly be behind the sound played on the BLUETOOTH enabled device.
Others

Listening To the Radio

1. Press TUNER (a) on the remote controller repeatedly to select either "AM" or "FM" on the display.
2. Press MODE (c) on the remote controller, so that the "TunMode: Auto" is displayed on the display.
3. When you press the ‡ / § cursor (b) buttons on the remote controller, automatic tuning starts, and searching stops when a station is found. When tuned into a radio station, the "TUNED" indicator on the display lights.

You can preset up to 40 stations.
1. Tune into the AM/FM radio station you want to register.
2. Press +Fav (d) on the remote controller so that the preset number on the display flashes.
3. While the preset number is flashing (about 8 seconds), repeatedly press the ‡ / § cursor (b) buttons on the remote controller to select a number between 1 and 40.
4. Press +Fav (d) again on the remote controller to register the station. When registered, the preset number stops flashing. To select a preset radio station, press the ‡ / § cursor (b) buttons on the remote controller.

To delete a preset station, press the ‡ / § cursor (b) buttons on the remote controller to select the preset number you want to delete, press +Fav (d) on the remote controller and then press CLEAR (e) while the preset number is flashing. When deleted, the number on the display goes off.

Frequency step setting
Press the ‡ button on the remote controller to select "System Setup" – "Miscellaneous" – "Tuner" – "AM/FM Frequency Step" or "AM Frequency Step" and select the frequency step for your area. Note that when this setting is changed, all radio presets are deleted.

Multi-zone

Play
1. While holding down MODE (a) on the remote controller, press ZONE 2 (b) for 3 or more seconds until the remote indicator blinks twice.
   • The remote controller switches to the mode for controlling ZONE 2.

2. Point the remote controller at the main unit and press Æ (d).
   “Z2” lights on the main unit display.

3. Press the input selector button (e) of the input to be played in the separate room. On the main unit, after pressing ZONE CONTROL, within 8 seconds turn the INPUT SELECTOR dial to select the input to be played in the separate room.
   • You can only select the same inputs for the main room and separate room with the "NET" or "BT AUDIO", or "USB" input selector. If you have "NET" selected in the main room and then select "USB" in the separate room, the main room also switches to "USB". You cannot select different stations for the main room and separate room with the AM/FM radio.
   • DSD and Dolby TrueHD audio signals are not output to ZONE 2 when selected with the "NET", "USB" input selector.

4. To adjust the volume on the power amplifier in the separate room or the Zone Speaker, adjust with VOL+/- on the remote controller. To control on the main unit, press ZONE CONTROL and within 8 seconds, adjust with the MASTER VOLUME dial.

To return the remote controller to main room control mode: While holding down MODE (a) on the remote controller, press MAIN (c) for 3 seconds or more until the remote indicator flashes once.
The information for a connected device can be displayed on the TV screen in a separate room. Press the button while the remote controller is in the mode for controlling ZONE 2.

Power consumption in standby mode increases when the multi-zone function is being used.

To turn off the function
Press \( \text{ } \) while in the mode for controlling ZONE 2 on the remote controller.

Playing in ZONE 2 only
If you turn the unit to standby during multi-zone playback, the Z2 indicator is dimmed and the playback mode is switched to playback in a separate room only. Setting ZONE 2 to on while this unit is in standby will also switch the playback mode to the same setting.

MULTI-ZONE MUSIC
If you press MULTI-ZONE MUSIC on the main unit while playback is being performed in the main room, “Z2” on the display lights, the MULTI-ZONE MUSIC is turned on, and the playback source in the separate room is switched to the same source immediately.

- The sources that can be played in ZONE 2 can be played in all rooms.
- This function cannot be used if headphones are connected or audio is output from the speakers of the TV.

Settings
Settings are required in Initial Setup, “4. Multi Zone Setup” (P21) to use the multi-zone feature. When checking the setting content, refer to the following, press \( \text{ } \) on the remote controller, and check in “System Setup” in the Home that is displayed.

- When you have connected a TV in the separate room with an HDMI cable, have you selected “Use” in “Input/Output Assign” – “TV Out/OSD” – “Zone2 HDMI”?
- When you have connected speakers in a separate room with speaker cable, have you selected “Zone 2” in “Speaker” – “Configuration” – “Zone Speaker”?
- When you have connected a power amplifier in a separate room with an analog audio cable and you want to control the volume with this unit, have you selected “Variable” in “Multi Zone” – “Zone 2” – “Output Level”?

AV Adjust
By pressing \( \text{ } \) on the remote controller during play, you can adjust frequently used settings, such as the switching the speakers and adjusting sound quality, using on-screen menus. Select the item with the cursors of the remote controller and press ENTER to confirm your selection. To return to the previous screen, press \( \text{ } \). Note that there is no display on the TV screen when the input selector is “CD”, “TV”, “PHONO”, “FM”, or “AM”, so follow the main unit’s display while doing the operations.

- **“Tone”**: It is possible to enhance or moderate the bass and treble of front speakers.
- **“Other”**: Enables you to make a variety of settings.
- **“Sound Delay”**: If the video is behind the audio, you can delay the audio to offset the gap.
- **“Sound Retriever”**: Improve the quality of compressed audio.
- **“Speakers”**: You can switch the output on the surround back speakers and height speakers and switch the output for speakers A/B.
- **“HDMI Out”**: Allows you to select the HDMI OUT jack to output video signals from "MAIN", "SUB", and "MAIN+SUB".
Home

When you press \( \uparrow \) on the remote controller, the Home is displayed and you can make settings in the various menus. Select the item with the cursors of the remote controller and press ENTER to confirm your selection. To return to the previous screen, press \( \downarrow \).

“System Setup”: Advanced settings to provide you with an even better experience.
“MCACC”: Setup the speakers automatically or make desired changes to the equalizer.
“Network/Bluetooth”: Make Wi-Fi connection settings or settings related to BLUETOOTH.

When the unit is operating erratically

Try restarting the unit
Restarting the unit may help it operate more smoothly. To restart the unit, turn it to standby, and then press \( \uparrow \) STANDBY/ON on the main unit for at least 5 seconds. (The unit’s settings will be maintained.) If there is no improvement even after the unit is restarted, try disconnecting and reconnecting the power cords of the unit and connected equipment.

Resetting the unit (this resets the unit settings to the default)
If restarting the unit doesn’t fix the problem, resetting the unit to the status at the time of shipment may solve the problem. If you reset the unit status, your preferences will be reset to the defaults. Note them down before the operation below.

1. While holding down AUTO/DIRECT on the main unit, press \( \uparrow \) STANDBY/ON on the main unit.
2. “Clear” appears on the display and the unit returns to standby. Do not unplug the power cord until “Clear” disappears from the display.
   To reset the remote controller, while holding down MODE, press \( \uparrow \) \( \times \) until the remote indicator flash twice (about 3 seconds).
Front Panel

1. INPUT SELECTOR dial: Switch the input to be played.
2. MCACC indicator: This lights when you have enabled the speaker calibration made with MCACC.
3. FL OFF indicator: This lights when you have pressed DIMMER repeatedly to turn the display off.
4. INFO button: Switches the information on the display.
5. ZONE 2 ON/OFF button: Switches the multi-zone function on/off.
6. ZONE CONTROL button: Controls the multi-zone function.
7. MULTI-ZONE MUSIC button: Enables the MULTI-ZONE MUSIC function to play the same source in all the multi-zone connected rooms.
8. Display
9. Listening mode button: Select the listening mode.
10. NETWORK indicator: When the power of the unit is on, this lights when "NET" is selected with the input selector and the unit is connected to the network. If the unit is in standby mode, this lights when functions such as HDMI CEC and network standby are enabled. It does not light when ZONE 2 is on, however.
11. Remote control sensor
12. WIRELESS indicator: Lights when the unit is connected to the wireless network.
13. MASTER VOLUME dial: Allows you to adjust the volume.
14. STANDBY/ON button: Turns the unit on or into standby mode.
15. ADJUST button: You can perform common settings on the TV screen.
16. HOME button: Displays the Home.
17. Cursor buttons (TUNE↑↓ / PRESET←→ button) and ENTER button: Select the item with the cursors and press ENTER to confirm your selection. When using the TUNER, select the frequency with TUNE↑↓, or select preset stations with PRESET←→.
18. RETURN button: Returns the display to the previous state.
19. TUNING MODE button: Switches the tuning mode.
20. FAVORITE button: Used to register AM/FM radio stations.
21. PHONES jack: Stereo headphones with a standard plug (1/4 inch or ø6.3 mm) are connected.
22. MCACC SETUP MIC jack: The supplied speaker setup
microphone is connected.
23. PHASE CONTROL button: This turns on or off the Phase Control that corrects phase disturbance in the low range to enhance the bass.
24. USB port: A USB storage device is connected so that music files stored in it can be played. You can also supply power (maximum 5V/1A) to USB devices with a USB cable.
25. AUX INPUT HDMI jack: Connect to a video camera, etc., using a HDMI cable.
26. DIMMER button: You can adjust the brightness of the display in four steps.
27. Front flap

Display

1. Lights when operating the "NET", "USB" input selector indicating remote controller cursor operations are possible in screens showing list of tracks, for example.
2. Lights in the following conditions.
   Z2: When ZONE 2 is on.
   BLUETOOTH: When connected by BLUETOOTH.
   Wi-Fi: When connected by Wi-Fi.
   NET: When "NET" is selected with the input selector and the unit is connected to the network. It will flash if the connection to the network is not correct.
   USB: When "USB" is selected with the input selector and the unit is connected by USB and the USB device is selected. Flashes if the USB is not properly connected.
   HDMI: When HDMI signals are input and the HDMI input is selected.
   DIGITAL: When digital signals are input and the digital input is selected.
3. Lights according to the type of input digital audio signals and the listening mode.
4. Lights in the following conditions.
   RDS (European and Asian models): Receiving RDS broadcasting.
   TUNED: Receiving AM/FM radio.
   STEREO: Receiving FM stereo.
   SLEEP: When the sleep timer is set.
   AUTO STBY: When Auto Standby function is enabled.
5. The currently selected speaker system lights.
6. Lights when headphones are connected.
7. Flashes when muting is on.
8. Displays various information of the input signals. Characters that cannot be displayed on this unit are replaced with asterisks (⁎). Characters that cannot be displayed on this unit are replaced with asterisks (⁎).
9. Lights when adjusting the volume.
10. Speaker/Channel display: Displays the output channel that corresponds to the selected listening mode.
1. COMPONENT VIDEO IN jacks: Input the video signals from AV components with a component video cable.
2. ZONE 2 PRE/LINE OUT jacks: Output audio signals with an analog audio cable to a pre-main amplifier or a power amplifier in a separate room (ZONE 2). (⇒P18)
3. AUDIO IN jacks: Input the audio signal from AV components with an analog audio cable.
4. VIDEO IN jacks: Input the video signals from AV components with an analog video cable.
5. HDMI IN jacks: Transmit video signals and audio signals with a HDMI cable connected to an AV component.
6. SIGNAL GND terminal: The ground wire of the turntable is connected.
7. HDMI OUT jacks: Transmit video signals and audio signals with a HDMI cable connected to a monitor such as a TV or projector.
8. NETWORK port: Connect to the network with an Ethernet cable.
9. DIGITAL AUDIO IN OPTICAL/COAXIAL jacks: Input the digital audio signals from TV or AV components with a digital optical cable or digital coaxial cable.
10. Wireless antenna: Used upright for Wi-Fi connection or when using a BLUETOOTH enabled device. The diagram shows the movable range for the wireless antenna. Do not try to force it beyond this range otherwise you may break it.
11. AC IN: The supplied power cord is connected.
12. RS-232C port: For connection to the home control system.
13. ANTENNA AM LOOP/FM UNBAL 75Ω terminal: The supplied antennas are connected.
14. IR IN/OUT port: Allows you to connect a multiroom remote control kit.
15. 12V TRIGGER OUT A/B jacks: Allows you to connect a device with 12V trigger input jack to enable link operation between the device and the unit.
16. SUBWOOFER PRE OUT jacks: Connect a powered subwoofer with a subwoofer cable. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER PRE OUT jacks.
17. SPEAKERS terminals: Connect speakers with speaker cables. (North American models are compatible with banana plugs.)
Remote Controller

1.  button: Turns the unit on or into standby mode.
2. Input selector buttons: Select the input to be played. Use the buttons in 3 to select “STRM BOX”, “AUX”, or “PHONO”.
3.  button: Input source played switches each time you press one of these buttons.
4. (AV ADJUST) button: You can perform common settings on the TV screen. (P26)
5. Cursor buttons and ENTER button: Select the item with the cursors and press ENTER to confirm your selection.
6.  button: Displays the Home. (P26)
7. Volume buttons: Allows you to adjust the volume. This button also cancels the muting.
8.  button: Temporarily mutes audio. Press again to cancel muting.
9. LISTENING MODE buttons: Allows you to select the listening mode. (P22)
10. MAIN/ZONE 2 buttons: Controls the multi-zone function. (P25)
    (The ZONE 3 button is not used with this unit.)
11. Play buttons: You can start play of the Music Server or USB.
12.  button: You can start repeat or random play of the Music Server or USB.
13. CLEAR button: Deletes all characters you have entered when entering text on the TV screen.
14. (STATUS) button: Switches the information on the display.
15.  button: Returns the display to the previous state.
16. MODE button: Switches tuning to an AM/FM station between automatic tuning and manual tuning.
17. +Fav button: Used to register AM/FM radio stations.

### General Specifications

#### Amplifier Section
(North American)
- **Continuous average power output (\(^*1\))**
  - 120 W (\(^*2\)) per channel (8 Ω)
  - 150 W (\(^*3\)) per channel (6 Ω)
- 1 kHz with no more than 0.08% (\(^*4\)) total harmonic distortion
- 1 kHz with no more than 1% (\(^*4\)) total harmonic distortion
- Measured pursuant to the Federal Trade Commission’s Trade Regulation rule on Power Output Claims for Amplifiers

(Asian)
- Multi channel simultaneous power output (1 kHz, 1%, 8 Ω)
  - 560 W (7 ch total)
- Maximum power output (1 kHz, THD10%, 4 Ω, 1 ch Driven)
  - 320 W per channel
- Rated power output (1 kHz, 4 Ω, 1%, 1 ch Driven)
  - 220 W per channel
- Rated power output (1 kHz, 6 Ω, 1%, 1 ch Driven)
  - 180 W per channel
- Continuous Power Output (1 kHz, 8 Ω, 0.08%)
  - 120 W+120 W (Front)
  - 120 W (Center)
  - 120 W+120 W (Surround)
  - 120 W+120 W (Surround back/Height)
- Continuous Power Output (1 kHz, 6 Ω, 1.0%)
  - 150 W+150 W (Front)
  - 150 W (Center)
  - 150 W+150 W (Surround)
  - 150 W+150 W (Surround back/Height)
- Continuous Power Output (1 kHz, 4 Ω, 1.0%)
  - 200 W+200 W (Front)
  - 200 W (Center)
  - 200 W+200 W (Surround)
  - 200 W+200 W (Surround back/Height)

(European)
- Multi channel simultaneous power output (1 kHz, 1%, 8 Ω)
  - 560 W (7 ch total)
- Rated power output (1 kHz, 4 Ω, 1%, 1 ch Driven)
  - 220 W per channel

#### Video Section
- Signal level
  - 1 Vp-p/75 Ω (Composite Video)
  - 1 Vp-p/75 Ω (Component Video Y)
  - 0.7 Vp-p/75 Ω (Component Video B/R)
- Maximum resolution supported by component video
  - 480i/576i

#### Tuner Section
- **FM Tuning Frequency Range**
  - 87.5 MHz - 107.9 MHz (North American)
  - 87.5 MHz - 108.0 MHz, RDS (Others)
- **AM Tuning Frequency Range**
  - 530 kHz - 1710 kHz (North American)
  - 522/530 kHz - 1611/1710 kHz (Others)
- **Preset Channel**
  - 40

#### Network Section
- **Ethernet LAN**
  - 10BASE-T/100BASE-TX
- **Wireless LAN**
  - IEEE 802.11 a/b/g/n standard
  - Wi-Fi standard
  - 5 GHz/2.4 GHz band

#### BLUETOOTH Section
- **Communication system**
  - BLUETOOTH Specification version 4.1+LE
- **Frequency band**
  - 2.4 GHz band
- **Modulation method**
  - FHSS (Freq Hopping Spread Spectrum)
- **Compatible BLUETOOTH profiles**
  - A2DP 1.2
  - AVRCP 1.3
  - HOGP-Host (Client)
  - HOGP-HID Device (Server)
  - HID Service (HIDS)
Specifications

Supported Codecs
- SBC
- AAC

Transmission range (A2DP)
- 20 Hz - 20 kHz (Sampling frequency 44.1 kHz)

Maximum communication range
- Line of sight approx. 15 m (*)

* The actual range will vary depending on factors such as obstacles between devices, magnetic fields around a microwave oven, static electricity, cordless phone, reception sensitivity, antenna's performance, operating system, software application, etc.

General

Power Supply
- AC 120 V, 60 Hz (North American)
- AC 220 - 230 V, 50/60 Hz (European)
- AC 220 - 230/240 V, 50/60 Hz (Asian)

Power Consumption
- 250 W
- 0.15 W (Stand-by, North American)
- 0.2 W (Stand-by, Others)

Dimensions (W × H × D)
- 435 mm × 185 mm × 395 mm
- 17-1/8" × 7-5/16" × 15-9/16"

Weight
- 11.8 kg (26.0 lbs.) (North American)
- 12.0 kg (26.5 lbs.) (Others)

HDMI

Input
- IN1 (BD/DVD, HDCP2.2), IN2 (CBL/SAT, HDCP2.2), IN3 (STRM BOX, HDCP2.2), IN4 (GAME), IN5, IN6, AUX INPUT HDMI (front)

Output
- OUT MAIN (ARC, HDCP2.2) 55 mA
- OUT SUB (HDCP2.2) 55 mA

Supported
- Deep Color, x.v.Color™, LipSync, Audio Return Channel, 3D, 4K 60 Hz, CEC, Extended Colorimetry (sYCC601, Adobe RGB, Adobe YCC601), Content Type, HDR
- Audio Format
- Dolby Atmos, Dolby TrueHD, Dolby Digital, Dolby Digital Plus, DTS, DTS:X (to be supported in a future update), DTS-HD Master Audio, DTS-HD High Resolution Audio, DTS 96/24, DTS-ES, DTS-HD Express, DSD, PCM

Maximum Video Resolution
- 4k 60 Hz (YCbCr 4:4:4)

Video Inputs

Component
- IN1 (BD/DVD)
- Composite
- IN1 (CBL/SAT), IN2 (STRM BOX)

Compatible input resolutions

HDMI input
- 4K, 1080p/24, 1080p, 1080i, 720p, 480p/576p

Component input
- 480i/576i

Composite input
- 480i/576i

The output from the HDMI OUT jack to the TV is the same resolution as the input. When using a TV that supports 4K, 1080p HDMI video signals can also be output as 4K.

Audio Inputs

Digital
- OPTICAL 1 (BD/DVD), 2 (TV)
- COAXIAL (CD)

Analog
- BD/DVD, CBL/SAT, STRM BOX, CD, PHONO

Audio Outputs

Analog
- ZONE2 PRE/LINE OUT
- 2 SUBWOOFER PRE OUT

Speaker Outputs
- FRONT L/R, CENTER, SURROUND L/R, SURROUND BACK L/R, HEIGHT L/R
  (North American models are banana plug ready)

Phones
- PHONES (Front, ø 6.3 mm, 1/4")

Others

Setup Mic
- 1 (Front)

USB
- 1 (Ver. 2.0, 5 V/1 A)

Ethernet
- 1

RS232
- 1

12V TRIGGER OUT
- A : 100 mA, B : 25 mA

IR IN
- 1

IR OUT
- 1

Power consumption in standby mode

In the following cases, the power consumption in standby mode may reach up to a maximum of 5.5 W:
- When "Network Standby" is set to "On"
- When "HDMI CEC" is set to "On"
- When "HDMI Standby Through" is set to other than "Off"
- When "Bluetooth Wakeup" is set to "On"

Specifications and features are subject to change without notice.
HDMI (High Definition Multimedia Interface) is a digital interface standard for connecting TVs, projectors, Blu-ray Disc/DVD players, set-top boxes, and other video components. Until now, several separate video and audio cables have been required to connect AV components. With HDMI, a single cable can carry control signals, digital video, and digital audio (2 ch PCM, multichannel digital audio, and multichannel PCM).

**HDMI CEC functionality:**
By connecting devices and HDMI cables that comply with the CEC (Consumer Electronics Control) specification of the HDMI standard, a variety of linked operation become possible between devices. You can enjoy features such as linking input switching with the input selector and players, control volume using the remote controller of the TV, and automatically switching this unit to standby when the TV is turned off.

The unit is designed to link with products that comply with the CEC standard, and that linked operation is not always guaranteed with all CEC devices. For linked functions to work properly, do not connect more CEC-compliant components than the quantities specified below, to the HDMI jack. The unit supports Revision 1.4 and Revision 2.2 (HDMI OUT MAIN/SUB and HDMI IN 1 to 3 only) of the HDCP protection system for digital video signals. Other devices connected to the unit must also support HDCP.

**Copyright Protection:**
The unit supports Revision 1.4 and Revision 2.2 (HDMI OUT MAIN/SUB and HDMI IN 1 to 3 only) of the HDCP (High-bandwidth Digital Content Protection), a copy-protection system for digital video signals. Other devices connected to the unit must also support HDCP.

**Supported Audio Formats**

<table>
<thead>
<tr>
<th>2 ch linear PCM</th>
<th>Multi-channel linear PCM</th>
</tr>
</thead>
<tbody>
<tr>
<td>32 kHz, 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz, 16/20/24 bit</td>
<td>Maximum 7.1 channels, 32 kHz, 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz, 16/20/24 bit</td>
</tr>
</tbody>
</table>

**Bitstream:**
Dolby Atmos, Dolby Digital, Dolby Digital Plus, Dolby TrueHD, DTS, DTS:X (to be supported in a future update), DTS-HD High Resolution Audio, DTS-HD Master Audio

**DSD:**
Supported sampling rates: 2.8 MHz

Your Blu-ray Disc/DVD player must also support HDMI output of the above audio formats.

**Supported resolutions**

**HDMI IN1 to IN3:**
- Copyright protection technology: HDCP1.4/HDCP2.2
- Color space (Color Depth):
  - 720×480 60Hz, 720×576i 50Hz, 720×480p 60Hz, 720×576p 50Hz, 1920×1080 50/60Hz, 1280×720p 24/25/30/50/60Hz, 1680×720p 24/25/30/50/60Hz, 1920×1080p 24/25/30/50/60Hz, 2560×1080p 24/25/30/50/60Hz, 4K (3840×2160p) 24/25/30Hz, 4K SMPTE (4096×2160p) 24/25/30Hz:
    - RGB/YCbCr4:4:4:4 (8/10/12 bit), YCbCr4:2:2 (12 bit)
    - 4K (3840×2160p) 50/60Hz, 4K SMPTE (4096×2160p) 50/60Hz:
      - RGB/YCbCr4:4:4:4 (8/10/12 bit), YCbCr4:2:2 (12 bit), YCbCr4:2:0 (8/10/12 bit)

**HDMI IN4 to IN6, Front:**
- Copyright protection technology: HDCP1.4
- Color space (Color Depth):

System Setup

The unit allows you to configure advanced settings to provide you with an even better experience.

**Operation:**
Use the on-screen displays (OSD) that appear on the TV to make the settings. Press ⬇️ on the remote controller to display the Home screen, then select System Setup with the cursors on the remote controller and press ENTER.

Select the item with the cursor ⬅️/⬆️/➡️/⬇️ buttons of the remote controller and press ENTER to confirm your selection.

- To return to the previous screen, press ⬅️.
- To exit the settings, press ⬇️.

### Input/Output Assign
Make settings related to output to the TV, change the settings for jack allocations to the various input selectors, and set the feature for displaying operations on the TV (OSD), etc.

#### TV Out/OSD

</tr>
</thead>
</table>
| Input Volume Absorber | 0.0 dB        | Select a value between \(-12.0 \, \text{dB}\) and \(+12.0 \, \text{dB}\). Set a negative value if the volume of the target device is larger than the others and a positive value if smaller. To check the audio, start playback of the connected device.  
• This function is not effective in Zone 2. |

#### Name Edit

Set an easy name to each input. The set name will be shown on the main unit display. Select the input selector to configure.

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
</table>
| Name Edit    | Input name    | 1. Select a character or symbol with the cursors and press ENTER.  
Repeat it to input 10 or less characters.  
"A/a": Switches between upper and lower cases.  
(Pressing MODE on the remote controller also toggles between upper and lower cases)  
"<->": Moves the cursor to the arrow direction.  
"−": Removes a character on the left of the cursor.  
"L": Enters a space.  
• Pressing CLEAR on the remote controller will remove all the input characters.  
2. After inputting, select "OK" with the cursors and press ENTER.  
The input name will be saved.  
• To name a preset radio station, press TUNER on the remote controller, select AM/FM and select the preset number.  
• This cannot be set if the "NET", "USB" or "BT AUDIO" input is selected. |

#### Audio Select

Select the priority for input selection when multiple audio sources are connected to one input selector, such as connections to both the "BD/DVD" HDMI IN jack and the "BD/DVD" AUDIO IN jack. The setting can be separately set to each input selector. Select the input selector to configure. Note that there are some default values you cannot change.

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
</table>
| Audio Select |  |  | **BD/DVD**: When giving priority to input signal from BD/DVD.  
• The setting can be selected only when "System Setup" - "Hardware" - "HDMI" - "Audio Return Channel" is set to "Auto" and also the "TV" input is selected.  
"HDMI": When giving priority to input signal from HDMI IN jacks  
• The setting can be selected only when the input is assigned to the HDMI jack in the "System Setup" - "Input/Output Assign" - "HDMI Input" setting.  
"COAXIAL": When giving priority to input signal from DIGITAL AUDIO IN COAXIAL jacks  
• The setting can be selected only when the input is assigned to the COAXIAL jack in the "System Setup" - "Input/Output Assign" - "Digital Audio Input" setting.  
"OPTICAL": When giving priority to input signal from DIGITAL AUDIO IN OPTICAL jacks  
• The setting can be selected only when the input is assigned to the OPTICAL jack in the "System Setup" - "Input/Output Assign" - "Digital Audio Input" setting.  
"Analog": To always output analog audio independently of the input signal  
• The setting can be selected only when the input is assigned to the AUDIO IN jack in the "System Setup" - "Input/Output Assign" - "Analog Audio Input" setting. |
### Hardware

Make settings related to the HDMI CEC, HDMI Standby Through, or ARC features, settings related to power management of the unit, such as Auto Standby and Network Standby, and output settings for the 12V Trigger jack.

#### HDMI

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI CEC</td>
<td>Off</td>
<td>Setting to &quot;On&quot; enables the input selection link and other link functions with HDMI connected CEC compliant device. &quot;On&quot;: Use this function &quot;Off&quot;: Do not use this function When changing this setting, turn off and then on again the power of all connected components. • Depending on the TV set, a link may need to be configured on the TV. • This function is effective only when the device is connected to the HDMI OUT MAIN terminal. • Setting to &quot;On&quot; and closing the on-screen menu displays the name of the CEC-compatible components and &quot;CEC On&quot; on the display. • Power consumption in standby mode may increase if &quot;On&quot; is set. (Depending on the TV status, the unit will enter the normal standby mode.) • If you operate the MASTER VOLUME dial on the main unit when this setting is &quot;On&quot; and audio is output from the TV speakers, audio will be output also from the speakers connected to the unit. If you want to output from only either of them, change the unit or TV settings, or reduce the volume of the unit. • If abnormal operation occurs when you set the setting to &quot;On&quot;, set it to &quot;Off&quot;. • When connecting a non-CEC compatible component, or when you are not sure whether it is compatible, set the setting to &quot;Off&quot;.</td>
</tr>
</tbody>
</table>
### Specifications

#### HDMI Standby Through

<table>
<thead>
<tr>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
</table>
| Off           | When this is set to anything other than "Off", you can play the video and audio of an HDMI connected player on the TV even if the unit is in standby mode. Only "Auto" and "Auto(Eco)" can be selected if "HDMI CEC" is set to "On". If you select anything else, set "HDMI CEC" to "Off".  
  - Power consumption in standby mode increases if set to anything other than "Off".  
  "BD/DVD", "CBL/SAT", "GAME", "STRM BOX", "HDMI 5", "HDMI 6", "AUX": For example, if you select "BD/DVD", you can play the equipment connected to the "BD/DVD" jack on the TV even if the unit is in standby mode. Select this setting if you have decided which player to use with this function.  
  "Last": You can play the video and audio of the input selected immediately prior to the unit being switched to standby on the TV.  
  "Auto", "Auto (Eco)": Select one of these settings when you have connected equipment that conforms to the CEC standard. You can play the video and audio of the input selected on the TV, irrespective of what input was selected immediately prior to the unit being switched to standby, using the CEC link function.  
  - To play players on the TV that do not conform to the CEC standard, you will need to turn the unit on and switch to the relevant input.  
  - When using TV that complies with the CEC standard, you can reduce the power consumption in standby mode by selecting "Auto (Eco)". |

#### Audio TV Out

<table>
<thead>
<tr>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
</table>
| Off           | You can enjoy audio through the speakers of the TV while this unit is on.  
  "On": Use this function  
  "Off": Do not use this function  
  - This setting is fixed to "Auto" if you have set "System Setup" - "Input/Output Assign" - "TV Out/OSD" - "HDMI Out" or "Other" - "HDMI Out" in "AV Adjust" to "MAIN" or "MAIN+SUB" and "HDMI CEC" is set to "On". If you change this setting, set "HDMI CEC" to "Off".  
  - Listening mode cannot be changed while "Audio TV Out" is set to "On" and audio is being output through the speakers of the TV.  
  - Depending on your TV set or input signal of the component, audio may not output through the speakers of the TV even if this setting is set to "On". In such case, audio is output from the speakers of the unit.  
  - If you operate the MASTER VOLUME dial on this unit when audio that is being input through this unit for output from the TV speakers, audio is output from this unit. If you do not want to output audio from the unit, change the unit or TV settings, or reduce the volume of the unit. |

#### Audio Return Channel

| (Auto) (※) | You can enjoy sound of the HDMI connected ARC compatible TV through the speakers connected to the unit.  
  ※ To use this function, set "HDMI CEC" to "On" in advance.  
  "Auto": When enjoying the TV sound through the speakers connected to the unit  
  "Off": When not using the ARC function |

#### Auto Delay

| On | This setting automatically corrects any desynchronization between the video and audio signals based on data from the HDMI LipSync compatible TV.  
  "On": Automatic correction will be enabled  
  "Off": Automatic correction will be disabled |
## Power Management

<table>

<td>Enable or disable &quot;Auto Standby&quot; while &quot;HDMI Standby Through&quot; is on. The setting will be enabled if &quot;On&quot;, or disabled if &quot;Off&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Setting cannot be set to &quot;On&quot; if &quot;Auto Standby&quot; is set to &quot;Off&quot;.</td>
</tr>
</tbody>
</table>

### Setting Details

- **Network Standby**: On
  - When this feature is turned "On", you can turn on the power of the unit via the network using an application such as iControlAV5 that can control this unit.
  - **Network Standby** may be disabled when the network connection is lost. Use the power button on the remote controller or main unit to turn the unit on if this happens.

- **Bluetooth Wakeup**: Off
  - This function wakes up the unit on standby by connecting a BLUETOOTH enabled device.
  - **On**: Use this function
  - **Off**: Do not use this function
  - Setting to "On" increases the power consumption even when the unit is on standby. However, the increase in power consumption is kept to a minimum by automatically entering the HYBRID STANDBY mode, where only the essential circuit is operating.
  - **On**: This setting is fixed to "Off" if "Network/Bluetooth" - "Bluetooth" - "Auto Input Change" is set to "Off".

- **Sleep Timer**: Off
  - Select a value from "30 minutes", "60 minutes", and "90 minutes".

- **Auto Standby**: On/Off
  - The unit will automatically enter standby mode ("AUTO STBY" will light.)
  - The unit will not automatically enter standby mode
  - • "Auto Standby" is displayed on the display and TV screen 30 seconds before the Auto Standby comes on.
  - • "Auto Standby" does not work when Zone 2 is active.
  - • Default values vary depending on the regions.

- **Auto Standby in HDMI Standby Through**: (Off)
  - Enable or disable "Auto Standby" while "HDMI Standby Through" is on.
  - • Setting cannot be set to "On" if "Auto Standby" is set to "Off".

- **Wait for a while if "Network Standby" and "Bluetooth Wakeup" cannot be selected. It will appear when the network feature is started.
## 12V Trigger A

Set when outputting the control signal (maximum 12 V/100 mA) through the 12V TRIGGER OUT A jack. Different settings can be set for each input selector. You can enable power link operation when you connect the unit and the external devices equipped with 12V trigger input jack.

---

* Wait for a while if "Firmware Update" cannot be selected. It will appear when the network feature is started.
MCACC

Setup the speakers automatically or make desired changes to the equalizer. You can also check the values set currently for each speaker setting.

Operation:
Use the on-screen displays (OSD) that appear on the TV to make the settings. Press 🏛️ on the remote controller to display the Home screen, then select MCACC with the cursors on the remote controller and press ENTER.

Select the item with the cursor ⬆️/⬇️/⬅️/➡️ buttons of the remote controller and press ENTER to confirm your selection.
Use the cursors ⬅️/➡️ to change the default values.
• To return to the previous screen, press ⬅️.
• To exit the settings, press 🏛️.

Full Auto MCACC

Place the supplied speaker setup microphone in the listening position, measure the test tones emitted by the speakers, then the unit automatically sets the optimum volume level for each speaker, the crossover frequencies, and the distance from the listening position. This also automatically adjusts the equalizers for the speakers and enables correction of distortion caused by the acoustic environment of the room.

• Calibration takes several minutes to be completed. The speakers emit the test tone at high volume during measurement, so be careful of your surroundings. Keep the room as quiet as possible during measurement. If the measurement is interrupted, turn off the household appliances.

1. Place the supplied speaker setup microphone in the listening position, and connect to the MCACC SETUP MIC jack on the main unit.

When putting the speaker setup microphone on a tripod, refer to the illustration when putting it in place.
• To cancel Full Auto MCACC partway through, disconnect the speaker setup microphone. You cannot use any other menu options while it is connected.

2. Select the connected speaker configuration.
The image on the screen changes as you choose the number of channels in "Speaker Channels", so refer to it when performing the settings. Use this screen to select whether you have connected a subwoofer and to select the type of height speaker, etc.

- If you have connected a subwoofer, check the power and volume of the subwoofer. The low frequencies played by the subwoofer may not be discernible, so set its volume to at least halfway.

3. Test tones are emitted by the speakers, and firstly the unit detects the speakers connected and the noise in the environment.

4. After the results of the above measurements are displayed, select "Next", press ENTER on the remote controller, and the test tones are emitted again, and the unit automatically makes settings such as the optimum volume level and the crossover frequency.

5. When the measurement is completed, the measurement result is displayed. Press the cursors on the remote controller to check the settings. Press ENTER when "Save" is selected to save the settings.

6. Disconnect the speaker setup microphone.

---

**Manual MCACC**

### EQ Adjust

If you perform Full Auto MCACC then settings are automatic, but you can also adjust the output volume of the range of each connected speaker to suit your own preferences. You can adjust the volume of the different sound ranges for each of the speakers. You can set three different equalizers in Preset 1 to 3. You can select up to 4 bands for the Subwoofer and 9 bands for all other speakers.

- The result may not be as expected depending on the input source and listening mode setting.
- If you want to make the adjustments while listening to something, press  on the remote controller, and select the Preset you want to adjust in "AV Adjust" - "MCACC" - "Manual EQ Select" first.
MCACC Data Check

You can check the number of speaker channels connected and the content and values you have set for each of the speaker settings.

- **Speaker Setting**
  You can check the number of speaker channels connected and the large and small settings you have set for the low range reproduction capabilities for each of the speakers.

- **Channel Level**
  You can check the output level settings for each of the speakers.

- **Speaker Distance**
  You can check the distance from each speaker to the listening position.

- **Acoustic Calibration EQ**
  You can check the calibration values for the frequency characteristics of each speaker that were set in "Manual MCACC".
Network/Bluetooth

Make settings related to network connections and BLUETOOTH.

Operation:
Use the on-screen displays (OSD) that appear on the TV to make the settings. Press \(\triangleright\) on the remote controller to display the Home screen, select Network/Bluetooth with the cursors on the remote controller, then press ENTER.

Select the item with the cursor \(\uparrow/\downarrow/\leftarrow/\rightarrow\) buttons of the remote controller and press ENTER to confirm your selection.
Use the cursors \(\leftarrow/\rightarrow\) to change the default values.
- To return to the previous screen, press \(\triangleright\).
- To exit the settings, press \(\triangleright\).

Network

- When LAN is configured with a DHCP, set "DHCP" to "Enable" to configure the setting automatically. ("Enable" is set by default.) To assign fixed IP addresses to each components, you must set "DHCP" to "Disable" and assign an address to this unit in "IP Address" as well as set information related to your LAN, such as Subnet Mask and Gateway.

</tbody>
</table>

- Wait for a while if "Bluetooth" cannot be selected. It will appear when the BLUETOOTH function is started up.
You can quickly adjust settings you frequently use, such as tone adjustments, etc.

**Operation:**
You can make the settings on the TV screen while playing something. Press \( \text{AV Adjust} \) on the remote controller to display the AV Adjust menu. Note that there is no display on the TV screen when the input selector is "CD", "TV", "PHONO", "FM", or "AM", so follow the main unit’s display while doing the operations.

### AV Adjust

#### Tone

- **Bass**:
  - Enhance or moderate the bass range of the speaker.
  - It cannot be set if the listening mode is Direct or Pure Direct.

- **Treble**:
  - Enhance or moderate the treble range of the speaker.
  - It cannot be set if the listening mode is Direct or Pure Direct.

#### Level

- **Center**:
  - Adjust the speaker level of the center speaker while listening to some sound.
  - The adjustment you made will be reset to the previous status when you turn the unit to standby mode.

- **Subwoofer**:
  - Adjust the speaker level of the subwoofer while listening to some sound.
  - It cannot be set if the listening mode is Pure Direct.

#### MCACC

- **MCACC EQ**:
  - Enable or disable the equalizer function that corrects for distortion caused by the acoustic environment of the room.
  - This setting cannot be selected if Full Auto MCACC setting has not been performed.
  - It cannot be set if the listening mode is Pure Direct.

- **Manual EQ Select**:
  - From the Home screen, select "Preset 1" to "Preset 3" which were set in "MCACC" - "Manual MCACC" - "EQ Adjust". The same sound field setting is applied all ranges when set to "Off".
  - It cannot be set if the listening mode is Pure Direct.

- **Phase Control**:
  - Correct phase disturbance in the low range to enhance the bass. This enables you to achieve powerful bass reproduction that is faithful to the original sound.
  - It cannot be set if the listening mode is Pure Direct.

#### Other

- **Sound Delay**:
  - If the video is behind the audio, you can delay the audio to offset the gap. Different settings can be set for each input selector.
  - It cannot be set if the listening mode is Pure Direct and the input signal is analog.

- **Sound Retriever**:
  - Improve the quality of the compressed audio. Playback sound of lossy compressed files such as MP3 will be improved. The setting can be separately set to each input selector. The setting is effective in the signals of 48 kHz or less. The setting is not effective in the bitstream signals.
  - It cannot be set if the listening mode is Direct or Pure Direct.

- **Speakers**:
  - When surround back speakers and height speakers are connected, you switch the speakers you want to prioritize for output. Also, when Speaker B are used, you switch output between Speaker A/B/A+B.
  - Note that sound is not output from the surround back speaker during Speaker A+B output.

- **HDMI Out**:
  - Allows you to select the HDMI jack to output video signals from "MAIN", "SUB", and "MAIN+SUB".

- **DRC**:
  - Make small sounds easily heard. It is useful when you need to reduce the volume while watching a movie late
You can enjoy the effect only when playing Dolby series and DTS series input signals.

- It cannot be set if the listening mode is Direct or Pure Direct.
- The setting cannot be used in the following cases.
  - If "Loudness Management" is set to "Off" when playing Dolby Digital Plus or Dolby TrueHD
  - When the input signal is DTS and "Dialog Control" is other than 0 dB

Center Spread:
Adjust the width of the sound field of the front channel when playing in the Dolby Surround listening mode. To spread the width of the sound field to the left and right, set to "On". To concentrate sound in the center, set to "Off".
- Depending on the speaker settings, this becomes "Off".

Dialog Control:
You can increase the dialog portion of the audio in 1 dB steps up to 6 dB so that you can make dialog easier to hear over background noise.
- This cannot be set for content other than DTS:X.
- We plan to provide support for the DTS:X audio format through a firmware update for this unit. Center Image is displayed until the update.
- The effect may not be selectable with some content.
Control Function Settings

You can enable the control functions between the unit and external devices. Special devices or cable connections are necessary to enable the functions. For more information about installation, contact a store specializing in these products.

**RS-232C port**

Use this port for connection with an integrated control system that can enable home automation. Some integrated control systems provide a centralized operation with a single touch panel controller in order to control audio and video home appliances and security devices together. For more information about adopting an integrated control system, contact the specialized stores.

**IR jack**

If you use a commercially available multiroom remote control kit with this jack, you can operate the unit with the remote controller even when you are in a separate room, or operate the unit with the remote controller even if its remote control sensor is difficult to see. You can also connect a device with the unit and operate it with the remote controller.

**12V trigger output jack**

You can enable power link operation when you connect the unit and an external device such as a power amplifier equipped with 12V trigger input jack. When the desired input is selected on the unit, power link operation will be activated with a control signal of maximum 12 V/100 mA from the 12V TRIGGER OUT A jack or maximum 12 V/25 mA when using the 12V TRIGGER OUT B jack. You can select the zone to output the control signal by setting each of the inputs. For connection, use a monaural mini plug cable.

- Other companies may use indications other than IR on their products. Confirm in the instruction manual included with your components.
- Refer to the instruction manual of the IR receiver for the types of cables required for connection.
**About Firmware Update**

There are two methods for updating the firmware: via network and via USB. Use the one that best suits your environment.

- **For the latest information on updates,** visit the our company's website. There is no need to update the firmware on this unit if there is no update available.
- **Before updating,** make sure that the speaker setup microphone is not connected.
- **During an update,** do not:
  - Disconnect and reconnect any cable, USB storage device, speaker setup microphone or headphones, or perform any operation on the component such as turn off its power.
  - Accessing this unit from a PC or smartphone using an application.
- The update may take about 20 minutes to complete for either method: via network or via USB. Furthermore, existing settings are guaranteed regardless of the method used for update.

Note that when this unit is connected to a network, you may see notifications about firmware updates on the display. To execute updating, select "Update Now" with the cursor buttons of the remote controller and press ENTER. The unit automatically turns itself into standby mode after "Completed!" appears on the display, and updating will be complete.

**Disclaimer:** The program and accompanying online documentation are furnished to you for use at your own risk. Our company will not be liable and you will have no remedy for damages for any claim of any kind whatsoever concerning your use of the program or the accompanying online documentation, regardless of legal theory, and whether arising in tort or contract.

In no event will our company be liable to you or any third party for any special, indirect, incidental, or consequential damages of any kind, including, but not limited to, compensation, reimbursement or damages on account of the loss of present or prospective profits, loss of data, or for any other reason whatsoever.

---

**Updating the Firmware via Network**

**Preparation:**
- Check that the unit is turned on, and the connection to the Internet is secured.
- Turn off the controller component (PC etc.) connected to the network.
- Stop any playing Internet radio, USB storage device, or server content.
- If the multi-zone function is active, turn it off.
- If "HDMI CEC" is set to "On", set it to "Off".
  - Press on the remote controller to display the Home screen. Next, select "System Setup" - "Hardware" - "HDMI", press ENTER, select "HDMI CEC" and select "Off".

* The description may differ from the on-screen display but that will not change the way to operate or the function.

**Update**

1. Press on the remote controller. The Home screen is displayed on the TV screen.

2. Select "System Setup" - "Miscellaneous" - "Firmware Update" - "Update via NET" with the cursors in order, then press ENTER.
If "Firmware Update" is grayed out and cannot be selected, wait for a while until it starts up.
You will not be able to select "Update via NET" if there is nothing to update.

3. Press ENTER with "Update" selected to start update.
   • During the update, the TV screen may go black depending on the updated program. In that case, check the progress on the display of the unit. The TV screen will remain black until the update is complete and the power is turned on again.
   • "Completed!" is displayed when the update is complete.

4. Press STANDBY/ON on the main unit to switch the unit to standby. The process is completed and your firmware is updated to the latest version.
   • Do not use on the remote controller.

If an Error Message is Displayed
When an error occurs, "*-* * * Error!" is displayed on the display of the unit. ("*" represents an alphanumeric character.) Check the following:

Error Code
• *-01, *-10: Ethernet cable not found. Connect the Ethernet cable properly.
• *-02, *-03, *-04, *-05, *-06, *-11, *-13, *-14, *-16, *-17, *-18, *-20, *-21: Internet connection error. Check the following:
  – The router is turned on
  – This unit and the router are connected via the network
  Try to disconnect and then connect again the power to the unit and router. This may solve the problem. If you are still unable to connect to the Internet, the DNS server or proxy server may be temporarily down. Check the service status with your ISP provider.
• Others
  Disconnect then reconnect the AC power cord, then repeat from the beginning.

Updating via USB

Preparation:
• Prepare a 128MB or larger USB storage device. FAT16 or FAT32 file system format.
  – Media inserted in a USB card reader may not be used for this function.
  – USB storage devices with security function are not supported.
  – USB hubs and USB devices with hub function are not supported. Do not connect these devices to the unit.
• Delete any data stored on the USB storage device.
• Turn off the controller component (PC etc.) connected to the network.
• Stop any playing Internet radio, USB storage device, or server content.
• If the multi-zone function is active, turn it off.
• If "HDMI CEC" is set to "On", set it to "Off".
  – Press on the remote controller to display the Home screen. Next, select "System Setup" - "Hardware" - "HDMI", press ENTER, select "HDMI CEC" and select "Off".

* Some USB storage devices may take long to load, may not be loaded correctly, or may not be correctly fed depending on the device or their content.
* Our company will not be liable whatsoever for any loss or damage of data, or storage failure arising from the use of the USB storage device with this unit. Thank you for your understanding.
* The description may differ from the on-screen display but that will not change the way to operate or the function.

Update
1. Connect the USB storage device to your PC.
2. Download the firmware file from our company’s website to your PC and unzip.
   Firmware files are named in the following way:
   PIOAVR****_*********.zip
   Unzip the file on your PC. The number of unzipped files and folders varies depending on the model.
3. Copy all unzipped files and folders to the root folder of the USB storage device.
• Make sure to copy the unzipped files.

4. Connect the USB storage device to the USB port of the unit.
   • If you connect a USB hard disk drive to the USB port of the unit, we recommend that you use its AC adapter to power it.
   • If the USB storage device has been partitioned, each section will be treated as an independent device.

5. Press † on the remote controller.
The Home screen is displayed on the TV screen.

6. Select "System Setup" - "Miscellaneous" - "Firmware Update" - "Update via USB" with the cursors in order, then press ENTER.

7. Press ENTER with "Update" selected to start update.
   • During the update, the TV screen may go black depending on the updated program. In that case, check the progress on the display of the unit. The TV screen will remain black until the update is complete and the power is turned on again.
   • During the update, do not turn off, or disconnect then reconnect the USB storage device.
   • "Completed!" is displayed when the update is complete.

8. Disconnect the USB storage device from the unit.
9. Press †STANDBY/ON on the main unit to switch the unit to standby. The process is completed and your firmware is updated to the latest version.
   • Do not use † on the remote controller.

If an Error Message is Displayed
When an error occurs, "*-* * Error!* is displayed on the display of the unit. ("*" represents an alphanumeric character.) Check the following:

Error Code
• *-01, *-10: USB storage device not found. Check whether the USB storage device or USB cable is correctly inserted to the USB port of the unit.
Connect the USB storage device to an external power source if it has its own power supply.
• *-05, *-13, *-20, *-21: The firmware file is not present in the root folder of the USB storage device, or the firmware file is for another model. Retry from the download of the firmware file.
• Others: Disconnect then reconnect the AC power cord, then repeat from the beginning.
Selecting Listening Modes

You can change the listening mode during play by pressing repeatedly "AUTO/DIRECT", "Surr", or "Stereo".

- **AUTO/DIRECT button**
  Press repeatedly and the listening modes suited to the input signal are switched between "Auto Surround", "Direct", and "Pure Direct". After selecting one of them, "Auto Surround" (or "Direct" or "Pure Direct") is displayed, then the most suitable listening mode for the audio format is selected automatically (Dolby Digital for multi-channel input signals, Stereo for 2 channel input signals, etc.) and an indicator such as "Dolby D" is displayed on the display.

  - **AutoSurround**
  - **Direct**
  - **Pure Direct**

  The display changes automatically.

- **Surr button**
  By pressing repeatedly you can select the audio format of the signals being input and switch between a variety of listening modes. Select the mode that suits your preference. The selected listening mode is displayed on the display.

  - **Dolby D**
  - **Dolby Surr**
  - **Drama**

- **Stereo button**
  You can select the "Stereo" mode to playback only from the front speakers and subwoofer.

The "Direct" mode shuts down some processing that can affect sound quality, such as the tone control features, so you can enjoy even better sound quality. The "Pure Direct" mode shuts down even more processes that affects sound quality, so you get a more faithful reproduction of the original sound. In this case, the speaker calibration made with MCACC is invalid.
Updating of listening modes

We plan to provide support for the DTS:X audio format through firmware updates for this unit. This means that the selectable listening modes depend on the version of firmware.

On firmware version before DTS:X support
- You can select Neo:6 Cinema and Neo:6 Music.

On firmware version after DTS:X support
- You can select DTS:X, DTS:X MSTR and DTS Neural:X. (You cannot select Neo:6 Cinema and Neo:6 Music after updating.)

In alphabetical order

Action
Mode suitable for movies with a lot of action scenes.

AdvancedGame
Mode suitable for game content.

Classical
Suitable for classical or operatic music. This mode emphasizes the surround channels in order to widen the stereo image, and simulates the natural reverberation of a large hall.

Dolby Atmos
This mode faithfully reproduces the sound design recorded in the Dolby Atmos audio format. The Dolby Atmos audio format has been implemented in movie theaters equipped with the latest facilities and enables a revolutionary sound experience in home theaters. Unlike existing surround systems, Dolby Atmos doesn't rely on channels, but rather enables the accurate placement of sound objects that have independent motion in a three-dimensional space with even greater clarity. Dolby Atmos is an optional audio format on Blu-ray Discs and achieves a three-dimensional sound field by introducing a sound field above the listener.
- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

Dolby D (Dolby Digital)
This mode faithfully reproduces the sound design recorded in the Dolby Digital audio format. Dolby Digital is a multi-channel digital format developed by Dolby Laboratories, Inc. widely adopted for use in movie production. It is also a standard audio format on DVD-Video and Blu-ray Discs. It is possible to record a maximum of 5.1 channels on a DVD-Video or Blu-ray Disc; two front channels, a center channel, two surround channels, and the LFE channel dedicated to the bass region (sound elements for the subwoofer).
- To enable transfer of this audio format, connect via digital cable and set audio output on the player to bitstream output.

Dolby D+ (Dolby Digital Plus)
This mode faithfully reproduces the sound design recorded in the Dolby Digital Plus audio format. The Dolby Digital Plus format is a revision based on Dolby Digital, increasing the number of channels and endeavoring to improve sound quality by giving more flexibility in data bit rates. Dolby Digital Plus is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with additional channels such as the Surround Back channel added for a maximum of 7.1ch. 7.1ch is recorded at 96kHz/24bit, and 5.1ch is recorded at 192kHz/24bit.
- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

Dolby Surround
These listening modes allow you to expand the playback signal to 5.1 channels or 7.1 channels to suit the connected speaker configuration when the input signal is 2 channels or 5.1 channels. Dolby surround is a next generation surround technology that intelligently up mixes stereo; 5.1 and 7.1 content for playback through your surround speaker system. Dolby surround is compatible with traditional speaker layouts, as well as Dolby Atmos enabled playback systems that employ ceiling speakers or products with Dolby speaker technology.

Dolby TrueHD
This mode faithfully reproduces the sound design recorded in the Dolby TrueHD audio format. The Dolby TrueHD audio format is a reversible format expanded based on the lossless compression technology referred to as MLP, and it makes it possible to faithfully reproduce the master audio recorded in the studio. Dolby TrueHD is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with additional channels such as the Surround Back channel added for a maximum of 7.1ch. 7.1ch is recorded at 96kHz/24bit, and 5.1ch is recorded at 192kHz/24bit.
- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

Drama
Suitable for TV shows produced in a TV studio. This mode enhances the surround effects to the entire sound to give clarity to voices and create a realistic acoustic image.

DSD
Mode suitable for playing sources recorded in DSD.
- This unit supports DSD signals input through HDMI IN. However, depending on the connected player, better sound is possible when output from the PCM output of the player.
- This listening mode cannot be selected if the output setting on your Blu-ray Disc/DVD player is not set to DSD.

DTS
This mode faithfully reproduces the sound design recorded...
in the DTS audio format.
The DTS audio format is a multi-channel digital format
developed by DTS, Inc. This format is an optional audio
format on DVD-Video and a standard on Blu-ray Discs.
It enables recording of 5.1 channels; two front channels,
a center channel, two surround channels, and the LFE
channel dedicated to the bass region (sound elements
for the subwoofer). The content is recorded with a rich
volume of data, with maximum sampling rate of 48kHz at
a resolution of 24 bits and a bit rate of 1.5 Mbps.

• To enable transfer of this audio format, connect via
digital cable and set audio output on the player to
bitstream output.

■ DTS 96/24
This mode faithfully reproduces the sound design recorded
in the DTS 96/24 audio format.
The DTS 96/24 format is an optional audio format on
DVD-Video and Blu-ray Discs. It enables recording of
5.1 channels; two front channels, a center channel, two
surround channels, and the LFE channel dedicated to the
bass region (sound elements for the subwoofer). Detailed
reproduction is achieved by recording the content at a
sampling rate of 96kHz at a resolution of 24 bits.

• To enable transfer of this audio format, connect via
digital cable and set audio output on the player to
bitstream output.

■ DTS Express
This mode faithfully reproduces the sound design recorded
in the DTS Express audio format.
DTS Express is used as an optional audio format on Blu-
ray Discs, based on 5.1ch, but with channels such as the
surround back channel added for a maximum of 7.1ch. It
also supports low bit rates.

• To enable transfer of this audio format, connect via
HDMI cable and set audio output on the player to
bitstream output.

■ DTS-HD HR (DTS-HD High Resolution Audio)
This mode faithfully reproduces the sound design recorded
in the DTS-HD High Resolution Audio audio format.
DTS-HD High Resolution Audio is used as an optional
audio format on Blu-ray Discs, based on 5.1ch, but with
additional channels such as the Surround Back channel
added for a maximum of 7.1ch. It can be recorded at a
sampling rate of 96kHz with a resolution of 24 bits.

• To enable transfer of this audio format, connect via
HDMI cable and set audio output on the player to
bitstream output.

■ DTS-HD MSTR (DTS-HD Master Audio)
This mode faithfully reproduces the sound design recorded
in the DTS-HD Master Audio audio format.
DTS-HD Master Audio is used as an optional audio format
on Blu-ray Discs, based on 5.1ch, but with additional
channels such as the Surround Back channel added for a maximum of 7.1ch, recorded using lossless audio
reproduction technology. 96kHz/24bit is supported with
7.1ch, and 192kHz/24bit is supported with 5.1ch.

• To enable transfer of this audio format, connect via
HDMI cable and set audio output on the player to
bitstream output.

■ DTS Neo:6
These listening modes allow you to expand the playback
signal to 5.1 channels or 7.1 channels to suit the
connected speaker configuration when the input signal
is 2 channel. It offers full-bandwidth on all channels, with
great independence between the channels. There are two
variants for this mode: Neo:6 Cinema which is ideal for
movies and Neo:6 Music which is ideal for music.

■ DTS Neural:X
This listening mode allows you to expand the playback
signal to 5.1 channels or 7.1 channels to suit the
connected speaker configuration when the input signal is
2 channels or 5.1 channels. Neural:X enables upmixing of
legacy content such as mono, stereo, 5.1 or 7.1ch to many
higher speaker count including the layout using elevated
channels set for DTS:X playback.

■ DTS:X / DTS:X MSTR (DTS:X Master Audio)
This mode faithfully reproduces the sound design recorded
in the DTS:X audio format. You can select DTS:X mode or
DTS:X MSTR mode depending on the format.
The DTS:X audio format is a combination of the mixing
methodology based on past channel based formats (5.1ch
and 7.1ch) and object based dynamic audio mixing, and
it is characterized by the precise positioning of sounds
and the ability to express movement. DTS:X is DTS’s
next-generation object-based surround sound technology
that includes height to deliver a fully-immersive listening
experience to your living room.

• To enable transfer of this audio format, connect via
HDMI cable and set audio output on the player to
bitstream output.

■ ES Discrete (DTS-ES Discrete)
This mode faithfully reproduces the sound design recorded
in the DTS-ES Discrete audio format.
DTS-ES Discrete is used as an optional audio format on
DVD-Video and Blu-ray Discs, based on 5.1ch, but with an
additional monaural back channel added for a maximum of
6.1ch.

• To enable transfer of this audio format, connect via
digital cable and set audio output on the player to
bitstream output.

■ ES Matrix (DTS-ES Matrix)
This mode faithfully reproduces the sound design recorded
in the DTS-ES Matrix audio format.
DTS-ES Matrix is used as an optional audio format on
DVD-Video and Blu-ray Discs, based on 5.1ch, but with a
monaural Surround Back channel included by matrix
encoding. The matrix decoder on this unit decodes this
during playback to produce 6.1 channels.

• To enable transfer of this audio format, connect via
digital cable and set audio output on the player to
bitstream output.

■ Ent.Show (Entertainment Show)
Suitable for rock or pop music. Listening to music in this
mode creates a lively sound field with a powerful acoustic
image, like being at a club or rock concert.

- **Ext.Mono (Extended Mono)**
  In this mode, all speakers output the same sound in mono, so the sound you hear is the same regardless of where you are within the listening room.

- **Ext.Stereo (Extended Stereo)**
  Ideal for background music, this mode fills the entire listening area with stereo sound from the front, surround, and surround back speakers.

- **F.S.Surround (Front Stage Surround Advance)**
  In this mode, you can enjoy a virtual playback of multichannel surround sound even with only two or three speakers. This works by controlling how sounds reach the listener’s left and right ears.

- **Mono**
  Use this mode when watching an old movie with a mono soundtrack, or use it to separately reproduce soundtracks in two different languages recorded in the left and right channels of some movies. It is also suitable for DVDs or other sources containing multiplexed audio.

- **Multich PCM (Multichannel PCM)**
  Mode suitable for playing sources recorded in multichannel PCM.

- **Rock/Pop**
  Mode suitable for rock content.

- **Sports**
  Mode suitable for sport content.

- **Stereo**
  In this mode, sound is output from the front left and right speakers and subwoofer.

- **Unplugged**
  Suitable for acoustic instruments, vocals and jazz. This mode emphasizes the front stereo image, giving the impression of being right in front of the stage.
Selectable Listening Modes

You can select a variety of listening modes to suit the audio format of the signal being input.

- The Stereo mode can be selected with any audio format.
- When analog signals are being input in the Pure Direct mode, the modes switch to the Analog Direct mode which passes signals directly to the amplifier without passing through the DSP (Digital Signal Processor). However, when you are using Speaker B, the listening mode suited to the input signal is selected automatically.
- Listening modes available when headphones are connected are Pure Direct and Stereo only.

### Updating of listening modes

We plan to provide support for the DTS:X audio format through firmware updates for this unit. This means that the selectable listening modes depend on the version of firmware.

On firmware version before DTS:X support
- You can select Neo:6 Cinema and Neo:6 Music.

On firmware version after DTS:X support
- You can select DTS:X, DTS:X MSTR and DTS Neural:X. (You cannot select Neo:6 Cinema and Neo:6 Music after updating.)

*1 Surround speakers or height speakers need to be installed.
*2 A center speaker, surround speakers, or height speakers need to be installed.
**Tuning into a Radio Station**

**Tuning Automatically**
1. Press TUNER on the remote controller several times to select either "AM" or "FM".
2. Press MODE on the remote controller so that "TunMode:Auto" appears on the display.
3. Press the cursors ▲▼ on the remote controller to start automatic tuning.
   - Searching automatically stops when a station is found. When tuned into a radio station, the "TUNED" indicator on the display lights. When tuned into an FM radio station, the "STEREO" indicator lights.
   - No sound is output while the "TUNED" indicator is off.

When FM broadcasts reception is poor:
Radio waves may be weak depending on the building structure and environmental conditions. In that case, perform the procedure as explained below in "Tuning Manually" to manually select the desired station.

**Tuning Manually**
1. Press TUNER on the remote controller several times to select either "AM" or "FM".
2. Press MODE on the remote controller so that "TunMode:Manual" appears on the display.
3. While pressing the cursors ▲▼ on the remote controller, select the desired radio station.
   - The frequency changes by 1 step each time you press the button. The frequency changes continuously if the button is held down and stops when the button is released. Tune by looking at the display.

---

**Presetting a Radio Station**

It allows you to register up to 40 of your favorite AM/FM radio stations. Registering radio stations in advance allows you to tune into your radio station of choice directly.

**Registration Procedure**
1. Tune into the AM/FM radio station you want to register.
2. Press +Fav on the remote controller so that the preset number on the display flashes.
3. While the preset number is flashing (about 8 seconds), repeatedly press ▲▼ on the remote controller to select a number between 1 and 40.
4. Press +Fav on the remote controller again to register the station.
   - When the station is registered, the preset number stops flashing.
   - Repeat this procedure for all of your favorite AM/FM radio stations.

**Selecting a Preset Radio Station**
1. Press TUNER on the remote controller.
2. Press ▲▼ on the remote controller to select a preset number.

**Deleting a Preset Radio Station**
1. Press TUNER on the remote controller.
2. Press ▲▼ on the remote controller to select the preset number to delete.
3. After pressing +Fav on the remote controller, press CLEAR while the preset number is flashing to delete the preset number.
   - When deleted, the number on the display goes off.
Using RDS (European, Australian and Asian models)

RDS stands for Radio Data System and is a method of transmitting data in FM radio signals. In regions using RDS, the radio station name is displayed when you tune into a radio station broadcasting program information. When you press \( \text{ji} \) on the remote controller in this state, you can use the following functions.

### Display text information (Radio Text)

1. While the name of the station is being displayed on the display, press \( \text{ji} \) on the remote controller once.
   
   Radio Text (RT) broadcast by the station is displayed scrolling across the display. "No Text Data" is displayed when no text information is available.

   - Unusual characters may be displayed when the unit receives unsupported characters. However, this is not a malfunction. Also, if the signal from a station is weak, information may not be displayed.

### Search for stations by Program Type

1. While the name of the station is being displayed on the display, press \( \text{ji} \) on the remote controller twice.

2. Press \( \text{up/down} \) on the remote controller to select the Program Type you want to find, then press ENTER to start the search.

   The Program Types displayed are as follows:
   
   None
   News (News reports)
   Affairs (Current affairs)
   Info (Information)
   Sport
   Educate (Education)
   Drama
   Culture
   Science (Science and technology)
   Varied
   Pop M (Pop music)
   Rock M (Rock music)
   Easy M (Middle of the road music)
   Light M (Light classics)
   Classics (Serious classics)
   Other M (Other music)
   Weather
   Finance
   Children (Children's programmes)
   Social (Social affairs)
   Religion
   Phone In
   Travel
   Leisure
   Jazz (Jazz music)
   Country (Country music)
   Nation M (National music)
   Oldies (Oldies music)
   Folk M (Folk music)
   Document (Documentary)

   - The information displayed may sometimes not match the content being broadcast by the station.

3. When a station is found, the station flashes on the display. Press ENTER while this is happening to start receiving that station. If you don't press ENTER, the unit continues to search for another station.

   - If no stations are found, the message "Not Found" is displayed.

   - Unusual characters may be displayed when the unit receives unsupported characters. However, this is not a malfunction. Also, if the signal from a station is weak, information may not be displayed.
**USB Storage Device Requirements**

- This unit can use USB storage devices that comply with the USB mass storage device class standard.
- FAT16 or FAT32 file system format.
- If the USB storage device has been partitioned, each section will be treated as an independent device.
- Up to 20,000 tracks per folder can be displayed, and folders may be nested up to 16 levels deep.
- USB hubs and USB storage devices with hub functions are not supported. Do not connect these devices to the unit.
- USB storage devices with security function are not supported on this unit.
- If you connect a USB hard disk drive to the USB port of the unit, we recommend that you use its AC adapter to power it.
- Media inserted to the USB card reader may not be available in this function. Depending on the USB storage device, proper reading of the contents may not be possible.
- Our company accepts no responsibility whatsoever for the loss or damage to data stored on a USB storage device when that device is used with this unit. We recommend that you back up your important music files beforehand.
Supported Audio Formats

For server playback and playback from a USB storage device, this unit supports the following music file formats. Note that sound files that are protected by copyright cannot be played on this unit.

**MP3 (.mp3/.MP3):**
- **Supported formats:** MPEG-1/MPEG-2 Audio Layer 3
- **Supported sampling rates:** 44.1 kHz, 48 kHz
- **Supported bitrates:** Between 8 kbps and 320 kbps. Incompatible files cannot be played.

**WMA (.wma/.WMA):**
- **Supported sampling rates:** 44.1 kHz, 48 kHz
- **Supported bitrates:** Between 5 kbps and 320 kbps. Incompatible files cannot be played.
- **WMA Pro/Voice/WMA Lossless formats are not supported.**

**WAV (.wav/.WAV):**
WAV files include uncompressed PCM digital audio.
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

**AIFF (.aiff/.aif/.aifc/.AIF/.AIFC/.AFC):**
AIFF files include uncompressed PCM digital audio.
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

**AAC (.aac/.mp4/.3gp/.3g2/.AAC/.M4A/.MP4/.3GP/.3G2):**
- **Supported formats:** MPEG-2/MPEG-4 Audio
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz
- **Supported bitrates:** Between 8 kbps and 320 kbps. Incompatible files cannot be played.

**FLAC (.flac/.FLAC):**
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

**Apple Lossless (.m4a/.mp4/.M4A/.MP4):**
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz,

---

96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 16 bit, 24 bit

**DSD (.dsf/.dff/.DSF/.DFF):**
- **Supported formats:** DSF/DSDIFF
- **Supported sampling rates:** 2.8 MHz, 5.6 MHz, 11.2 MHz

**Dolby TrueHD (.vr/.mlp/.VR/.MLP):**
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Variable bit-rate (VBR) files are supported. However, playback times may not be displayed correctly.**
- **This unit supports the gapless playback of the USB storage device in the following conditions.**
  When playing WAV, FLAC and Apple Lossless, and the same format, sampling frequency, channels and quantization bit rate are played continuously
Internet Radio

TuneIn Radio

With more than 70,000 radio stations and 2 million on-demand programs registered, TuneIn Radio is a service where you can enjoy music, sports and news from all over the world.

■ Playing Back
1. Switch the input on the TV to that assigned to the unit.
2. Press NET on the remote controller to display the network service list screen.
3. Select "TuneIn" with the cursors of the remote controller and press ENTER to confirm your selection.
4. Follow the on-screen instructions, using the cursors on the remote controller to select radio stations and programs, then press ENTER to play.
   Play starts when 100% is displayed for buffering.

Operations with the remote controller:

1. ▼▲: When the station or program lists are not shown on one screen, you can change the screen.
2. ːː: Pressed during play, this button changes the displayed track information. Pressed while a station or program list is displayed, this button returns you to the play screen.

Regarding the TuneIn Radio Menu

To display the TuneIn Radio menu during play, press ENTER on the remote controller. Selecting the corresponding menu item with the cursors and pressing ENTER allows you to perform the following operations:

Add to My Presets: Registers radio stations being broadcast and programs in "My Presets". Once registered, "My Presets" is displayed in the level under TuneIn Radio. To play, select the program you like from "My Presets".

Remove from My Presets: Removes a radio station or program from "My Presets".

Regarding the TuneIn Radio Account

Creating an account on the TuneIn Radio website (tunein.com) and logging in from the unit allows you to automatically add your favorite radio stations and programs to your "My Presets" on the unit as you follow them on the website. "My Presets" are displayed in the level under TuneIn Radio.

To display a radio station registered in "My Presets", you must log into TuneIn Radio from the unit. To log in, select "Login" - "I have a TuneIn account" in the "TuneIn Radio" top list on the unit, and then enter your user name and password.

• If you associate the device on My Page within the TuneIn Radio website using the registration code obtained by selecting "Login" - "Login with a registration code" on the unit, you can log in without entering the user name and password.

Pandora®—Getting Started (U.S., Australia and New Zealand only)

Pandora is a free, personalized Internet radio service that plays the music you know and helps you discover music you’ll love.

### Playing Back

1. Switch the input on the TV to that assigned to the unit.
2. Press NET on the remote controller to display the network service list screen.
3. With the cursors on the remote controller, select "Pandora", and then press ENTER.
4. Use ◀/▶ on the remote controller to select "I have a Pandora Account" or "I'm new to Pandora" and then press ENTER.
   - If you are new to Pandora, select "I'm new to Pandora". You will see an activation code on your TV screen. Please write down this code. Go to an Internet connected computer and point your browser to www.pandora.com/pioneer. Enter your activation code and then follow the instructions to create your Pandora account and your personalized Pandora stations. You can create your stations by entering your favorite tracks and artists when prompted. After you have created your account and stations you can return to your receiver and press ENTER to begin listening to your personalized Pandora.
   - If you have an existing Pandora account, you can add your Pandora account to your receiver by selecting "I have a Pandora Account" and logging in with your email and password.
5. To play a station, use ◀/▶ on the remote controller to select the station from your station list, and then press ENTER. Playback starts and the playback screen appears.
   - To return to the previous screen, press ◀.

### Operations with the remote controller:

1. ◀/▶: When the station or program lists are not shown on one screen, you can change the screen.
2. ◀: Pressed during play, this button changes the displayed track information. Pressed while a station or program list is displayed, this button returns you to the play screen.
3. ◀/▶: Pressed during play this button pauses playback. Pressed while paused, and it restarts play.
4. ◀/▶: This button plays the next track.

### Icons on the display

- ː Folder
- ℹ️: Radio station
- ◁: Playing
- ⇤: Pause
- ◀: Artist
- ◄: Album

### Regarding the Pandora Menu

Icons are displayed at the bottom right of the screen while playing a station. You can do the following by selecting the icon with ◀/▶ on the remote controller and pressing ENTER:

#### (I like this track)
- Give a track "thumbs-up" and Pandora will play more music like it.

#### (I don’t like this track)
- Give a track "thumbs-down" and Pandora will ban that track from the current station.

- ː Automatically find stations matching your preferences based on genre, specific artists, and songs, and delete those stations you don’t need.

### Create new station

Enter the name of a track, artist, or genre and Pandora will create a unique radio station for you based on the musical qualities of that track, artist, or genre.
This unit supports Spotify Connect. To enable Spotify Connect, install the Spotify application on your smartphone or tablet and create a Spotify premium account.
• This unit needs to be connected to the same router as the smartphone or tablet.
• Refer to the following for Spotify settings:
  www.spotify.com/connect/
• The Spotify software is subject to third party licenses found here:
  www.spotify.com/connect/third-party-licenses

### Playing Back
1. Connect the smartphone to the network that this unit is connected to.
2. When the power of this unit is on, click the Connect icon in the track play screen of the Spotify app.
3. Select this unit.
4. The input selector of this unit automatically changes to NET and streaming of Spotify starts.
• When "System Setup" - "Hardware" - "Power Management" - "Network Standby" in the Home screen is set to "On", by clicking the Connect icon and selecting this unit, then even if this unit is in standby mode, the power will come on automatically and streaming starts.

#### Operations with the remote controller:
1. This button plays the previous track.
2. : This button lets you start repeat or random playback. Pressing this button repeatedly cycles through the repeat modes.
3. : Pressed during play, this button changes the displayed track information.
4. | : Pressed during play this button pauses playback. Pressed while paused, and it restarts play.
5. | : This button plays the next track.

#### Notes for using multi-zone
• To enjoy Spotify music in a separate room, manually select "NET" as the input of the separate room. After doing that, select this unit with the Spotify app.
• Volume adjustment with the Spotify app is possible only for speakers connected to the ZONE speaker terminals or when the volume of the audio device in the other room is configured so that its volume can be adjusted on this unit. Adjust the volume on the audio equipment in the other room in any other case.
• To enjoy Spotify music in the main room after playing it in a separate room, select "NET" as the input of the main room.
Music Server

Overview

Streaming play of music files stored on PCs or NAS devices connected to the same network as this unit is supported.

- The network servers this unit is compatible with are those PCs with players installed that have the server functionality of Windows Media® Player 11 or 12, or NAS that are compatible with home network functionality. You may need to make some settings in advance to use Windows Media® Player 11 or 12. Note that only music files registered in the library of Windows Media® Player can be played.

Configuring the Windows Media® Player

**Windows Media® Player 11**

1. Turn on your PC and start Windows Media® Player 11.
2. In the "Library" menu, select "Media Sharing" to display a dialog box.
3. Select the "Share my media" check box, and then click "OK" to display the compatible devices.
4. Select this unit, and then click "Allow".
   - When it is clicked, the corresponding icon is checked.
5. Click "OK" to close the dialog.
   - Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

**Windows Media® Player 12**

1. Turn on your PC and start Windows Media® Player 12.
2. In the "Stream" menu, select "Turn on media streaming" to display a dialog box.
   - If media streaming is already turned on, select "More streaming options..." in the "Stream" menu to list players in the network, and then go to step 4.
3. Click "Turn on media streaming" to list players in the network.
4. Select this unit in "Media streaming options" and check that it is set to "Allow".
5. Click "OK" to close the dialog.
   - Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

Play

1. Start the server (Windows Media® Player 11, Windows Media® Player 12, or NAS device) containing the music files to play.
2. Make sure that the PCs and/or NASs are properly connected to the same network as this unit.
3. Press NET on the remote controller to display the network service list screen.
   - If the "NET" indicator flashes in the display, the unit is not properly connected to the network. Check the connection.

4. With the cursors on the remote controller, select "Music Server", and then press ENTER.
5. Select the target server with the cursors on the remote controller and press ENTER to display the items list screen.
   - The unit cannot access pictures and videos stored on servers.
   - Contents stored on the server may not be displayed depending on the server sharing settings.

6. With the cursors on the remote controller, select the music file to play, and then press ENTER to start playback.
   - If "No Item." is displayed, check whether the network is properly connected.
   - To return to the previous screen, press ➝.

   - For music files on a server, there can be up to 20,000 tracks per folder, and folders may be nested up to 16
Depending on the media server, the unit may not recognize it, or may not be able to play its music files.

Operations with the remote controller:

1. ➩: When the folder or file lists are not shown on one screen, you can change the screen.
2. ➩: This button plays the previous track.
3. ➩: This button lets you start repeat or random playback. Pressing this button repeatedly cycles through the repeat modes.
4. i: Pressed during play, this button changes the displayed track information. Pressed while a folder or file list is displayed, this button returns you to the play screen.
5. ➩/ ■: Pressed during play this button pauses playback. Pressed while paused, and it restarts play.
6. ➩: This button plays the next track.

Icons Displayed during Playback:
Icons are displayed on the display during music file playback. The meaning of each icon is as follows:

- Folder
- Track
- Playing
- Pause
- Artist
- Album
- Repeat One Track
- Repeat within a folder
- Shuffle

Controlling Remote Playback from a PC

You can use this unit to play music files stored on your PC by operating the PC inside your home network. The unit supports remote playback with Windows Media® Player 12. To use the remote playback function with Windows Media® Player 12, it must be configured in advance.

1. Setting PC
   1. Turn on your PC and start Windows Media® Player 12.
   2. In the "Stream" menu, select "Turn on media streaming" to display a dialog box.
      - If media streaming is already turned on, select "More streaming options..." in the "Stream" menu to list players in the network, and then go to step 4.
   3. Click "Turn on media streaming" to list players in the network.
   4. Select this unit in "Media streaming options" and check that it is set to "Allow".
   5. Click "OK" to close the dialog box.
   6. Open the "Stream" menu and check that "Allow remote control of my Player..." is checked.
      - Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

2. Remote playback
   1. Turn on the power of the unit.
   2. Turn on your PC and start Windows Media® Player 12.
   3. Select and right-click the music file to play with Windows Media® Player 12.
      - To remotely play a music file on another server, open the target server from "Other Libraries" and select the music file to play.
   4. Select this unit in "Play to" to open the "Play to" window of Windows Media® Player 12 and start playback on the unit.
      - Operations during remote playback are possible.
from the "Play to" window on the PC. The playback screen is displayed on the TV connected to the HDMI output of the unit. If your PC is running on Windows® 8, click "Play to", and then select this unit.

5. Adjust the volume using the volume bar on the "Play to" window.
   - Sometimes, the volume displayed on the remote playback window may differ from that appeared on the display of the unit.
   - When the volume is adjusted from the unit, the value is not reflected in the "Play to" window.
   - This unit cannot play music files remotely in the following conditions.
     - It is using a network service.
     - It is playing a music file on a USB storage device.
   - Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

### Supported Audio Formats

This unit supports the following music file formats. Remote play of FLAC and DSD is not supported.

#### MP3 (.mp3/.MP3):
- Supported formats: MPEG-1/MPEG-2 Audio Layer 3
- Supported sampling rates: 44.1 kHz, 48 kHz
- Supported bitrates: Between 8 kbps and 320 kbps.
  - Incompatible files cannot be played.

#### WMA (.wma/.WMA):
- Supported sampling rates: 44.1 kHz, 48 kHz
- Supported bitrates: Between 5 kbps and 320 kbps.
  - Incompatible files cannot be played.
  - WMA Pro/Voice/WMA Lossless formats are not supported

#### WAV (.wav/.WAV):
WAV files include uncompressed PCM digital audio.
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

AIFF files include uncompressed PCM digital audio.
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

- Supported formats: MPEG-2/MPEG-4 Audio
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz
- Supported bitrates: Between 8 kbps and 320 kbps.
  - Incompatible files cannot be played.

#### FLAC (.flac/.FLAC):
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

#### LPCM (Linear PCM):
- Supported sampling rates: 44.1 kHz, 48 kHz

- Quantization bit: 16 bit

**Apple Lossless (.m4a/.mp4/.M4A/.MP4):**
- Supported formats: DSF/DSDIFF
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz
- Quantization bit: 16 bit, 24 bit

**DSD (.dsf/.dff/.DSF/.DFF):**
- Supported formats: DSF/DSDIFF
- Supported sampling rates: 2.8 MHz, 5.6 MHz, 11.2 MHz
- Variable bit-rate (VBR) files are supported. However, playback times may not be displayed correctly.
- Remote playback does not support the gapless playback.
### Before starting the procedure

Problems may be solved by simply turning the power on/off or disconnecting/connecting the power cord, which is easier than working on the connection, setting and operating procedure. Try the simple measures on both the unit and the connected device. If the problem is that the video or audio is not output or the HDMI linked operation does not work, disconnecting/connecting the HDMI cable may solve it. When reconnecting, be careful not to wind the HDMI cable since if wound the HDMI cable may not fit well. After reconnecting, turn off and on the unit and the connected device. If the problem is that the video or audio is not output or the HDMI linked operation does not work, disconnecting/connecting the HDMI cable may solve it. When reconnecting, be careful not to wind the HDMI cable since if wound the HDMI cable may not fit well. After reconnecting, turn off and on the unit and the connected device.

- This unit contains a microPC for signal processing and control functions. In very rare situations, severe interference, noise from an external source, or static electricity may cause it to lockup. In the unlikely event that this happens, unplug the power cord from the wall outlet, wait at least 5 seconds, and then plug it back in.

- If the power turns off unexpectedly
  - The unit automatically switches to standby when the "System Setup" - "Hardware" - "Power Management" - "Auto Standby" setting in the Home screen functions.
  - If you play at high volumes or allow input of excessive bass, the protection circuits in the amplifier can be tripped which may suddenly turn the unit off. Try the following if this occurs.
    - Reduce the volume
    - Select 63 Hz or 125 Hz for each of the speakers in "MCACC" - "Manual MCACC" - "EQ Adjust" in the Home screen, and reduce the volume compared to the current setting.
    - In "System Setup" - "Speaker" - "Crossover", set "Front" to "Small" or set "Front" to "Large" and set "Double Bass" to "On"
  - If the power turns off and indicators on the front panel continually blink, there may have been a malfunction with the amplifier or the protection circuit may have tripped.
    - If the WIRELESS indicator is blinking: The wires in the speaker cables may have touch the rear panel or other wires. Twist the wires again properly and make sure they do not stick out of the speaker terminals when connecting.
    - If the MCACC indicator is blinking: Unplug the power cord from the wall outlet immediately and contact the dealer or our company’s support.
    - If the FL OFF indicator is blinking: The temperature inside the unit has exceeded the admissible value. Make sure the unit has plenty of space for ventilation around it, wait for the unit to cool down sufficiently, and then try turning it on again. It is also possible that the amplifier circuits in the unit have malfunctioned. Wait for at least a minute and then turn the unit on again.

- If the same symptoms such as being unable to turn the unit on happen repeatedly, unplug the power cord from the wall outlet immediately and contact the dealer or our company’s support.

**WARNING**: If smoke, smell or abnormal noise is produced by the unit, unplug the power cord from the wall outlet immediately and contact the dealer or our company’s support.

### Audio

- Make sure that the speaker setup microphone is not still connected.
- Confirm that the connection between the output jack on the device and the input jack on this unit is correct.
- Make sure that none of the connecting cables are bent, twisted, or damaged.
- If the FLX indicator on the display flashes, press FLX on the remote controller to cancel muting.
- While headphones are connected to the PHONES jack, no sound is output from the speakers.
- When "System Setup" - "Source" - "Audio Select" - "Fixed PCM" in the Home Menu is set to "On", no sound is played when signals other than PCM are input. Change the setting to Off.

Check the following if the above does not fix the problem:

### There is no sound from the TV

- Change the input selector on this unit to the position of the terminal to which the TV is connected.
- If the TV doesn’t support the ARC function, along with connection by HDMI, connect the TV and this unit using a digital optical cable, digital coaxial cable, or analog audio cable.

### No sound from a connected player

- Change the input selector on this unit to the position of the terminal to which the player is connected.
- Check the digital audio output setting on the connected component. On some game consoles, such as those...
that support DVD, the default setting is off.

- With some DVD-Video discs, you need to select an audio output format from a menu.

**A speaker produces no sound**
- Make sure that the polarity of the speaker cables (+/−) is correct, and that no bare wires are in contact with the metal part of speaker terminals.
- Make sure that the speaker cables are not shorting.
- Check in "Connect the Speakers" in the Basic Manual that the speaker connections have been made correctly. Settings for the speaker connection environment need to be made in "Full Auto MCACC" in Initial Setup. Check in "Initial Setup" in the Basic Manual.
- Depending on the source and current listening mode, not much sound may be produced by the surround speakers. Select another listening mode to see if sound is output.
- If you are installing surround back speakers, surround speakers are required.
- A maximum of 5.1 ch playback is possible when Bi-Amping connection is used. Further, make sure you remove the jumper bar on the speakers when using Bi-Amping connection.

**The subwoofer produces no sound**
- When you play source material that contains no information in the LFE channel, the subwoofer produces no sound.

**Noise can be heard**
- Using cable ties to bundle audio cables with power cords, speaker cables, etc. may degrade the audio performance, so refrain from doing it.
- An audio cable may be picking up interference. Try repositioning your cables.

**The beginning of audio received by an HDMI IN cannot be heard**
- Since it takes longer to identify the format of an HDMI signal than it does for other digital audio signals, audio output may not start immediately.

**Sound suddenly reduces**
- When the temperature inside the unit exceeds a certain temperature for extended periods, the volume may be reduced automatically to protect the circuits.

### Listening Modes

**To enjoy digital surround playback, such as Dolby Digital, the audio signals need to pass through a connection via HDMI cable, digital coaxial cable, or digital optical cable. Audio output should be set to bitstream output on the connected Blu-ray Disc player or other device.**

- Press  on the remote controller several times to switch the display of the main unit to check the input format.

Check the following if the above does not fix the problem:

**Cannot select a desired listening mode**
- Depending on the connecting status of the speaker, some listening modes may not be selected. Check in "Selectable Listening Modes" in "Listening Modes" in the Advanced Manual.

**There is no sound with Dolby TrueHD, Dolby Atmos, and DTS-HD Master Audio**
- You need to connect surround back speakers or height speakers to enjoy Dolby Atmos. Furthermore, Dolby Atmos can only be enjoyed when the input signals are Dolby Atmos.
- If you cannot output formats such as Dolby TrueHD, Dolby Atmos, or DTS-HD Master Audio according to the format of the source, in the Blu-ray Disc player settings try setting "BD video supplementary sound" (or re-encode, secondary sound, video additional audio, etc.) to "Off". Change the listening mode for each source after changing the setting to confirm.

**About DTS signals**
- With media that switches suddenly from DTS to PCM, PCM playback may not start immediately. In such cases, you should stop your player for about 3 seconds and then resume playback.
- With some CD and LD players, you will not be able to playback DTS material properly even though your player is connected to a digital input on the unit. This is usually because the DTS bitstream has been processed (e.g., output level, sampling rate, or frequency response changed) and the unit does not recognize it as a genuine DTS signal. In such cases, you may hear noise.
- Playing DTS program material, using the pause, fast forward, or fast reverse function on your player may produce a short audible noise. This is not a malfunction.

**When playing DTS:X format audio, unable to select a DTS:X listening mode or cannot play**
- This issue will be dealt with by future firmware updates.
Video

- Confirm that the connection between the output jack on the device and the input jack on this unit is correct.
- Make sure that none of the connecting cables are bent, twisted, or damaged.
- When the TV image is blurry or unclear, power code or connection cables of the unit may have interfered. In that case, keep distance between TV antenna cable and cables of the unit.
- Make sure the switching of input screens is proper at the monitor side such as a TV.

Check the following if the above does not fix the problem:

- There is no video
  - Change the input selector on this unit to the position of the terminal to which the player is connected.

- There is no picture from a source connected to an HDMI IN terminal.
  - To display video from the connected player on the TV screen while the unit is in standby, you need to enable "System Setup" - "Hardware" - "HDMI" - "HDMI Standby Through" in the Home screen. Refer to "HDMI Setup" in "Setup" in the Basic Manual for information about HDMI Standby Through.
  - To output video to a TV connected to the HDMI OUT SUB jack, in the "AV Adjust" menu displayed when the remote controller select the HDMI OUT jack for output in "Other" - "HDMI Out".
  - If you connect a player supporting HDCP2.2, be sure to connect it to one of the HDMI IN1 to IN3 jacks of the unit.
  - Check if "Resolution Error" is displayed on the main unit display when video input via HDMI IN jack is not displayed. In this case, the TV does not support the resolution of the video input from the player. Change the setting on the player.
  - Reliable operation with an HDMI-DVI adapter is not guaranteed. In addition, video signals from a PC are not supported.

Images flicker
- It is possible that the resolution of the player is not compatible with the TV's resolution. If you have connected the player to this unit with an HDMI cable, try changing the output resolution on the player. There also may be an improvement if you change the screen mode on the TV.

Video and audio are out of synch
- Video may be delayed relative to audio depending on the settings and connections with your television. To adjust, press on the remote controller, and adjust in "Other" - "Sound Delay" in "AV Adjust".

Linked operation

- There is no linked operation with CEC compliant devices, such as a TV.
  - Set "System Setup" - "Hardware" - "HDMI" - "HDMI CEC" in the Home screen of the unit to "On".
  - It is also necessary to set HDMI linking on the CEC compliant device. Check the instruction manual.
  - When connecting a Sharp brand player or recorder to the HDMI IN 1 to IN 3 jacks, set "System Setup" - "Hardware" - "HDMI" - "HDMI Standby Through" to "Auto".

Tuner

- Radio reception is poor or there is a lot of noise.
  - Re-check the antenna connection.
  - Relocate your antenna.
  - Move the unit away from your TV or PC.
  - Passing cars and airplanes can cause interference.
  - Concrete walls weaken radio signals.
  - Listen to the station in mono.
  - When listening to an AM station, operating the remote controller may cause noise.
  - FM reception may become clearer if you use the antenna jack on the wall used for the TV.

- Radio reception is poor or there is a lot of noise.
  - Re-check the antenna connection.
  - Relocate your antenna.
  - Move the unit away from your TV or PC.
  - Passing cars and airplanes can cause interference.
  - Concrete walls weaken radio signals.
  - Listen to the station in mono.
  - When listening to an AM station, operating the remote controller may cause noise.
  - FM reception may become clearer if you use the antenna jack on the wall used for the TV.
**BLUETOOTH function**

- Try plugging/unplugging the power of the unit and try turning on/off the BLUETOOTH enabled device. Restart of the BLUETOOTH enabled device may be effective.
- The BLUETOOTH enabled devices must support the A2DP profile.
- Near components such as microwave oven or cordless phone, which use the radio wave in the 2.4 GHz range, a radio wave interference may occur, which disables the use of this unit.
- If there is a metallic object near the unit, BLUETOOTH connection may not be possible as the metal can effect on the radio waves.

Check the following if the above does not fix the problem:

- **Cannot connect with this unit**
  - Check that the BLUETOOTH function of the BLUETOOTH enabled device is enabled.

- **Music playback is unavailable on the unit even after successful BLUETOOTH connection**
  - When the audio volume of your BLUETOOTH enabled device is set low, the playback of audio may be unavailable. Volume up the BLUETOOTH enabled device.
  - Depending on the BLUETOOTH enabled device, Send/Receive selector switch may be provided. Select Send mode.
  - Depending on the characteristics or specifications of your BLUETOOTH enabled device, playback on the unit is not guaranteed.

- **Sound is interrupted**
  - Problem may be occurring at the BLUETOOTH enabled device. Check the information on the internet.

- **The audio quality is poor after connection with a BLUETOOTH enabled device**
  - The BLUETOOTH reception is poor. Move the BLUETOOTH enabled device closer to the unit or remove any obstacle between the BLUETOOTH enabled device and this unit.

**Network function**

- If you cannot select a network service, it will become selectable when the network function is started. It may take about a minute to start up.
- When NET is blinking, this unit is not properly connected to the home network.
- Try plugging/unplugging the power supply of this unit and the router, and try rebooting the router.
- If the desired wireless LAN router is not in the access point list, it may be set to hide SSID or the ANY connection may be off. Change the setting and try again.

Check the following if the above does not fix the problem:

- **Cannot access the Internet radio**
  - Certain network service or contents available through the unit may not be accessible in case the service provider terminates its service.
  - Make sure that your modem and router are properly connected, and make sure they are both turned on.
  - Make sure that the LAN side port on the router is properly connected to this unit.
  - Make sure that connecting to Internet from other components is possible. If connecting is not possible, turn off all components connected to the network, wait for a while, and then turn on the components again.
  - If a specific radio station is unavailable for listening, make sure the registered URL is correct, or whether the format distributed from the radio station is supported by this unit.
  - Depending on ISP, setting the proxy server is necessary.
  - Make sure that the used router and/or modem is supported by your ISP.

- **Playback stops while listening to music files on the network server**
  - Make sure the network server is compatible with this unit.
  - When the PC is serving as the network server, try quitting any application software other than the server software (Windows Media® Player 12, etc.).
  - If the PC is downloading or copying large files, the playback may be interrupted.

**Cannot access the network server**

- This unit needs to be connected to the same router as the network server.
- This unit is compatible with Windows Media® Player 11 or 12 network servers or NAS that are compatible with home network functionality.
- When using a PC, only music files registered in the Windows Media® Player library can be played.
USB storage device

- **USB storage device is not displayed**
  - Check whether the USB storage device or USB cable is correctly inserted to the USB port of the unit.
  - Disconnect the USB storage device from the unit, and then try reconnecting.
  - Performance of the hard disk that receive power from the USB port of the unit is not guaranteed.
  - Depending on the type of format, the playback may not be performed normally. Check the type of the file formats that is supported.
  - USB storage devices with security functions may not be played.

Wireless LAN Network

- **Try plugging/unplugging the power supply of wireless LAN router and the unit, check the wireless LAN router power-on status, and try reboot of the wireless LAN router.**

Check the following if the above does not fix the problem:

- **Cannot access wireless LAN network**
  - The wireless LAN router setting may be switched to Manual. Return the setting to Auto.
  - Try the manual set-up. The connection may succeed.
  - When the wireless LAN router setting is at stealth mode (mode to hide the SSID key) or when ANY connection is off, the SSID is not displayed. Change the setting and try again.
  - Check that the setting of SSID and encryption (WEP, etc.) is correct. Make sure the network settings of the unit is properly set.
  - Connection to an SSID that includes multi-byte characters is not supported. Name the SSID of the wireless LAN router using single-byte alphanumeric characters only and try again.

- **Connected to an SSID different to the SSID selected**
  - Some wireless LAN routers allow you to set multiple SSIDs for one unit. If you use the automatic setting button on such a router, you may end up connecting with a different SSID from the SSID you wanted to connect to. Use the connection method requiring you to enter a password if this happens.

- **Playback is interrupted and communication does not work**
  - You may not receive radio waves due to bad radio wave conditions. Shorten the distance from the wireless LAN access point or remove obstacles to improve visibility, and try again. Place the unit away from microwave ovens or other access points. It is recommended to place the wireless LAN router (access point) and the unit in the same room.
  - If there is a metallic object near the unit, wireless LAN connection may not be possible as the metal can effect on the radio wave.
  - When other wireless LAN devices are used near the unit, several issues such as interrupted playback and communication may occur. You can avoid these issues by changing the channel of your wireless LAN router. For instructions on changing channels, see the instruction manual provided with your wireless LAN router.
  - There may not be enough bandwidth available in wireless LAN. Connect using an Ethernet cable.

Multi-zone function

- **Cannot ZONE output audio of external AV component**
  - Depending on the model, input by HDMI cable may not be supported. Check in "Multi-zone Connection" in the Basic Manual, and if input by HDMI cable is not supported, connect using a cable that is supported.
  - The audio from externally connected AV components can only be output when the audio is analog or 2ch PCM audio signals. If you have connected the AV component to this unit with a digital cable, the audio output of the AV component needs to be set to PCM.

Other

- Settings are required in Initial Setup, "Multi Zone Setup" to use the multi-zone feature. Check in "Initial Setup" in the Basic Manual.
  - If the audio signal is from the NET or USB input selector, zone output is not possible for DSD and Dolby TrueHD audio signals.

Remote Controller

- Make sure that the batteries are installed with the correct polarity.
  - Install new batteries. Do not mix different types of batteries, or old and new batteries.
  - Make sure that the unit is not subjected to direct sunshine or inverter-type fluorescent lights. Relocate if necessary.
• If the unit is installed in a rack or cabinet with colored-glass doors or if the doors are closed, the remote controller may not work reliably.
• After operating the Multi-zone function, the remote controller may have switched to the mode for operating ZONE output audio. Check "Multi-zone" in "Playback" in the Basic Manual to switch the remote controller back to the mode for operating in the main room.

**Display, OSD**

**The display doesn't light**
• The display may go dim while the Dimmer is working, and may also turn off. Press DIMMER button and change the brightness level of the display.

**Others**

**Strange noises can be heard from the unit**
• If you have connected another unit to the same wall outlet as this unit, this noise may be an effect from the other unit. If the symptoms improve by unplugging the power cord of the other unit, use different wall outlets for this unit and the other unit.

**When performing Full Auto MCACC, the message "Noise Error" appears**
• This can be caused by a malfunction in your speaker unit. Check if the unit produces normal sounds.

**DRC function does not work**
• Make sure the source material is Dolby Digital, Dolby Digital Plus, Dolby TrueHD, or DTS.
Reference Information

Information about products with Wi-Fi/BLUETOOTH features

Radio Wave Caution

Products with Wi-Fi/BLUETOOTH use radio waves in the 2.4 GHz and 5GHz frequency bands. There are nations and regions where the use of particular 5 GHz bands are prohibited outdoors, so do not use these products outside.

2.4 GHz radio waves are used by a variety of devices, as shown in lists 1 and 2 below.

1. Devices which use a 2.4 GHz radio wave frequency
   - Cordless phones
   - Cordless facsimiles
   - Microwave ovens
   - Wireless LAN devices (IEEE802.11b/g/n)
   - Wireless AV equipment
   - Wireless controllers for game systems
   - Microwave oven-based health aids
   - Video transmitter
   - Specific type of external monitor and LCD display

2. Less common devices which use a 2.4 GHz radio wave frequency
   - Anti-theft systems
   - Amateur radio stations (HAM)
   - Warehouse logistic management systems
   - Discrimination systems for train or emergency vehicles

If these devices and the AV receiver are used at the same time, the audio may be undesirably stopped or disturbed due to a radio wave interference.

Suggestions for improvement
   - Switch off the devices which emit the radio wave.
   - Place the interfering devices away from the AV receiver.

Scope of Operation

Use of the AV receiver is limited to home use. (Transmission distances may be reduced depending on communication environment.)

In the following locations, poor condition or inability to receive radio waves may cause the audio to be interrupted or stopped:
   - In reinforced concrete buildings or steel framed or iron framed buildings.
   - Near large metallic furniture.
   - In a crowd of people or near a building or obstacle.
   - In a location exposed to the magnetic field, static electricity or radio wave interference from radio communication equipment using the same frequency band (2.4 GHz) as the AV receiver, such as a 2.4 GHz wireless LAN device (IEEE802.11b/g/n) or microwave oven.
   - If you live in a heavily populated residential area (apartment, townhouse, etc.) and if your neighbor's microwave oven is placed near your AV receiver, you may experience radio wave interference. If this occurs, move your AV receiver to a different place.
   - When the microwave oven is not in use, there will be no radio wave interference.

Radio Wave Reflections

The radio waves received by the AV receiver include the radio wave coming directly from the devices and waves coming from various directions due to reflections by walls, furniture and building (reflected waves). The reflected waves (due to obstacles and reflecting objects) further produce a variety of reflected waves as well as variation in reception condition depending on locations. If the audio cannot be received properly due to this phenomenon, try moving the location of the wireless LAN device a little. Also note that audio may be interrupted due to the reflected waves when a person crosses or approaches the space between the AV receiver and the wireless LAN device.

- We assume no responsibility whatsoever for any damages resulting from the use of this apparatus except in the cases deemed acceptable under the applicable laws and regulations.
- Operation in all environment is not guaranteed for wireless LAN. The communication may not be possible or have desirable communication speed.

Precautions

- Do not use this apparatus near an electronic device handling high-accuracy controls or weak signals. Doing so may cause an accident due to a malfunction of the device.
- Do not use this apparatus in use prohibited location such as an aircraft equipment or a hospital. Doing so may cause an accident due to a malfunction of an electronic device or an electro-medical apparatus. Follow the instructions of the medical facilities.

Electronic device which requires cautions:

Hearing aid, pace maker, other medical electronic devices, fire alarm, automatic door, and other automatic control device.

When using a pace maker or other medical electronic devices, confirm with the medical electronic device maker or dealer for the effect of the radio wave.
