SC-LX502 / AV RECEIVER

For details about the Network Functions and listening modes, and information regarding the advanced settings, refer to the "Advanced Manual" available on our website.
What's in the box

1. Main unit (1)
2. Remote controller (RC-914R) (1), Batteries (AAA/R03) (2)
3. Speaker setup microphone (1)
   • Used during Initial Setup.
4. Indoor FM antenna (1)
5. AM loop antenna (1)
6. Power cord (1)
   • Quick Start Guide (1)
   • Basic Manual (This manual)
   • Connect speakers with 4 Ω to 16 Ω impedance.
   • The power cord must be connected only after all other cable connections are completed.
   • We will not accept responsibility for damage arising from the connection of equipment manufactured by other companies.
   • Functionality may be introduced by firmware updates and service providers may cease services, meaning that some network services and content may become unavailable in the future. Furthermore, available services may vary depending on your area of residence.
   • Details on the firmware update will be posted on our website, etc.
   • Specifications and appearance are subject to change without prior notice.
Part Names

1. INPUT SELECTOR dial: Switch the input to be played.
2. MCACC indicator: This lights when you have enabled the speaker calibration made with MCACC. (P26)
3. FL OFF indicator: This lights when you have pressed DIMMER repeatedly to turn the display off.
4. INFO button: Switches the information on the display. (P34)
5. ZONE 2 ON/OFF button: Switches the multi-zone function on/off. (P32)
6. ZONE CONTROL button: Controls the multi-zone function. (P32)
7. MULTI-ZONE MUSIC button: Enables the MULTI-ZONE MUSIC function to play the same source in all the multi-zone connected rooms. (P33)
8. Display (P4)
9. Listening mode button: Press “AUTO/DIRECT”, “SURROUND” or “STEREO” to switch the listening mode. (P34) (*)
10. NETWORK indicator: This lights when “NET” is selected with the input selector and the unit is connected to the network. If the unit is in standby mode, this lights when functions such as HDMI CEC and network standby are enabled. It does not light when ZONE 2 is on, however.
11. Remote control sensor: Receives signals from the remote controller.
   - The signal range of the remote controller is within about 16'/5 m, at an angle of 20° on the perpendicular axis and 30° to either side.
12. WIRELESS indicator: Lights when the unit is connected to the wireless network and when connected to a BLUETOOTH enabled device.

(*) You can find details in the Advanced Manual.
13. MASTER VOLUME
14. STANDBY/ON button
15. ADJUST button: Settings such as "Tone" and "Level" can be made quickly during play on the TV screen.
16. HOME button: Displays the Home. (*)
17. Cursor buttons (↑ / ↓ / ← / →) and ENTER button: Select the item with the cursors and press ENTER to confirm. Use them to tune to stations when using TUNER. (P30)
18. RETURN button: Returns the display to the previous state.
19. TUNING MODE button: Switches tuning to an AM/FM radio station between automatic tuning and manual tuning.
20. +FAVORITE button: Used to register AM/FM radio stations.
21. PHONES jack: Headphones with a standard plug (Ø1/4"/6.3 mm) are connected.
22. MCACC SETUP MIC jack: The supplied speaker setup microphone is connected.
23. PHASE CONTROL button: This turns on or off the Phase Control that corrects phase disturbance in the low range to reproduce bass that is faithful to the original sound.
24. USB port: A USB storage device is connected so that music files stored in it can be played. You can also supply power (maximum 5 V/1 A) to USB devices with a USB cable.
25. AUX INPUT HDMI jack: Connect to a video camera, etc., using a HDMI cable.
26. DIMMER button: You can switch the display off or adjust the brightness of the display in three steps.
27. Front flap

Display
1. This may light when performing operations with the "NET", "USB" input selector.
2. Lights in the following conditions.
   Z2: When ZONE 2 is on.
   : When connected by BLUETOOTH.
   : When connected by Wi-Fi.
   NET: When "NET" is selected with the input selector and the unit is connected to the network. It will flash if the connection to the network is not correct.
   USB: When "USB" is selected with the input selector and the unit is connected by USB and the USB device is selected. Flashes if the USB is not properly connected.
   HDMI: When HDMI signals are input and the HDMI input is selected.
   DIGITAL: When digital signals are input and the digital input is selected.
3. Lights according to the type of input digital audio signals and the listening mode.
4. Lights in the following conditions.
   RDS (European, Australian and Asian models): Receiving RDS broadcasting.
   TUNED: Receiving AM/FM radio.
   STEREO: Receiving FM stereo.
   SLEEP: When the sleep timer is set. (*)
   AUTO STBY: Auto Standby is on. (*)
5. The currently selected speaker system lights.
6. Lights when headphones are connected.
7. Flashes when muting is on.
8. Displays various information of the input signals. Characters that cannot be displayed on this unit are replaced with asterisks (†).
Rear Panel

1. COMPONENT VIDEO IN jacks: Input the AV component video signals with a component video cable. (Compatible only with 480i or 576i resolution.)
2. ZONE 2 PRE/LINE OUT jacks: Output audio signals with an analog audio cable to a pre-main amplifier or a power amplifier in a separate room (ZONE 2).
3. AUDIO IN jacks: Input AV component audio signal with an analog audio cable.
4. VIDEO IN jacks: Input the AV component video signals with an analog video cable.
5. HDMI IN jacks: Transmit video signals and audio signals with a HDMI cable connected to an AV component.
6. HDMI OUT jacks: Transmit video signals and audio signals with a HDMI cable connected to a monitor such as a TV or projector.
7. SIGNAL GND terminal: The ground wire of the turntable is connected.
8. NETWORK port: Connect to the network with an Ethernet cable.
9. DIGITAL AUDIO IN OPTICAL/COAXIAL jacks: Input TV or AV component digital audio signals with a digital optical cable or digital coaxial cable.
10. Wireless antenna: Used upright for Wi-Fi connection or when using a BLUETOOTH enabled device. The diagram shows the movable range for the wireless antenna. Do not try to force it beyond this range otherwise you may break it.
11. AC IN: The supplied power cord is connected.
12. RS-232C port: For connection to the home control system. (*)
13. ANTENNA AM LOOP/FM UNBAL 75Ω terminal: The supplied antennas are connected.
14. IR IN/OUT port: Allows you to connect a multiroom remote control kit. (*)

(*) You can find details in the Advanced Manual.
15. 12V TRIGGER OUT A/B jack: Allows you to connect a device with 12V trigger input jack to enable link operation between the device and the unit. (*)
16. SUBWOOFER PRE OUT jack: Connect a powered subwoofer with a subwoofer cable. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER PRE OUT jacks.
17. SPEAKERS terminals: Use a speaker cable to connect multichannel speakers for the main room and speakers for a separate room (ZONE 2). (North American models are compatible with banana plugs.)

Remote Controller

1. STANDBY/ON button
2. Input selector buttons: Switches the input to be played.
3. buttons: Select the input to be played.
4. (AV ADJUST) button: Settings such as "Tone" and "Level" can be made quickly during play on the TV screen. "Other" has settings to switch the speakers given priority for output (P15) and to switch HDMI output (P17). Note that there is no display on the TV screen when the input selector is "CD", "TV", "PHONO", "AM", or "FM", so follow the display on the main unit while doing the operations. (*)
5. Cursor buttons and ENTER button: Select the item with the cursors and press ENTER to confirm your selection. When the folder or file lists are not shown on one screen on the TV, press to change the screen.
6. button: Displays the Home. (*)
7. Volume buttons
8. button: Temporarily mutes audio. Press again to cancel muting.
9. LISTENING MODE buttons: Allows you to select the listening mode (P34). (*) MAIN/ZONE 2 buttons: Controls the multi-zone function (P32). (The ZONE 3 button is not used with this unit.)
10. Play buttons: Used for play operations when playing Music Server or USB.
11. button: Used for repeat or random play operations when playing Music Server or USB. Each time you press the button, the mode switches from (1-track repeat), to (folder repeat), to (random).
12. (STATUS) button: Switches the information on the display and is used to operate RDS (P31).
13. button: Returns the display to the previous state.
14. MODE button: Switches tuning to an AM/FM station between automatic tuning and manual tuning (P30), and also used to control the multi-zone feature (P32).
15. button: Used to register AM/FM radio stations.

Tips

When the remote controller isn’t working: The remote controller may have switched to the mode for controlling ZONE 2. While holding down MODE, press MAIN for 3 seconds or more until the remote indicator flashes once to switch it to the mode to control the main room. (*)You can find details in the Advanced Manual.
Installation procedure

This unit can be used in a number of ways, depending on the layout of the speakers you are installing, and the connections made to external devices. Read the following to help make the installation process smoother.

Step1: Speaker Layout
Select the speaker layout that suits the types of speakers you have and the conditions they will be used in from the choices presented on pages P8 to P13, then install the speakers by referring to the illustrations and explanations on the relevant page. Speaker layouts include systems that use surround back speakers, systems that use height speakers, and systems that use Bi-Amping speakers. Also refer to the combinations available in "Speaker combinations" on P14.

Step2: Connect the Speakers
To connect the speaker systems to this unit, refer to P15 if you are using a speaker layout described on one of P8 to P12, and to P16 to use a speaker layout using Bi-Amping speakers described on P13. The connection process will be smoother if you refer to the illustrations and explanations and prepare the required cables before hand.

Step3: Connect the TV & AV Components
Refer to P17 to P24 to connect your external devices such as your TV, Blu-ray Disc Player, and also supplied accessories such as the antennas. Also, P21 to P23 introduces the Multi-zone Connection option that allows you to play video and audio into rooms other than the main room. The connection process will be smoother if you refer to the illustrations and explanations, confirm the connection types on the external devices, and prepare the required cables before hand.
Step1: Speaker Layout

7.1 Channel System
Front speakers output front stereo sound and a center speaker outputs center sound such as dialogs and vocals. Surround speakers create back sound field. Powered subwoofer reproduces bass sounds and creates rich sound field. This basic 5.1 Channel System with surround back speakers added is called a 7.1 Channel System. The connection of surround back speakers improves the sense of envelopment and connectivity of sound created by the back sound field and provides a more real sound field. Furthermore, by installing surround back speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound, when the input format is Dolby Atmos.

The front speakers should be positioned at ear height, while the surround speakers should be positioned just above ear height. Center speaker should be set up facing the listening position. Placing the powered subwoofer between the center speaker and a front speaker gives you a natural sound even when playing music. The optimal positioning is for surround back speakers to be at ear height.

- If you are including surround back speakers in the setup, surround speakers are required.
- “Speaker combinations” (P14) introduces some detailed examples of speaker combinations.

1,2 Front Speakers
3 Center Speaker
4,5 Surround Speakers
6 Powered Subwoofer
7,8 Surround Back Speakers
Speaker B System

With a 7.1 channel system (P8), you can connect one more set of front speakers to use as a Speaker B System. In this state, the 7.1 channel system becomes the Speaker A System and you can switch the same audio to output from A, B, or A+B. Press \( \text{Switch} \) on the remote control (P6) and use "Other" - "Speakers" to switch. Note that no sound is played from the surround back speakers when playing from A+B.

- "Speaker combinations" (P14) introduces some detailed examples of speaker combinations.
5.1.2 Channel System-1
(Front High Speakers/Rear High Speakers)

This is a basic 5.1 channel system consisting of front speakers, a center speaker, surround speakers, and a powered subwoofer, with the addition of front height speakers or rear high speakers, which are both types of height speakers. By installing height speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound including overhead sounds, when the input format is Dolby Atmos. Front high speakers or rear high speakers should be situated at least 3’/0.9 m higher than the front speakers. Front high speakers should be situated directly above the front speakers and the distance between the rear high speakers should match the distance between the front speakers. Both should be set up facing the listening position.

- "Speaker combinations" (P14) introduces some detailed examples of speaker combinations.

9, 10 Height Speakers
Choose one of the following:
- Front High Speakers
- Rear High Speakers
5.1.2 Channel System-2
(Ceiling Speakers)

This is a basic 5.1 channel system consisting of front speakers, a center speaker, surround speakers, and a powered subwoofer, with the addition of top front speakers, top middle speakers, or top rear speakers, which are types of height speakers. By installing height speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound including overhead sounds, when the input format is Dolby Atmos. Fit top front speakers on the ceiling forward of the seating position, top middle speakers on the ceiling directly above the seating position, and top rear speakers on the ceiling behind the seating position. The distance between each pair should match the distance between the two front speakers.

- Dolby Laboratories recommends placing this type of height speakers to obtain the best Dolby Atmos effect.
- “Speaker combinations” (P14) introduces some detailed examples of speaker combinations.

9,10 Height Speakers
Choose one of the following:
- Top Front Speakers
- Top Middle Speakers
- Top Rear Speakers

*1: 30° to 55°, *2: 65° to 100°, *3: 125° to 150°
5.1.2 Channel System-3

(Dolby Enabled Speakers (Dolby Speakers))

This is a basic 5.1 channel system consisting of front speakers, a center speaker, surround speakers, and a powered subwoofer, with the addition of Dolby enabled speakers (front), Dolby enabled speakers (surround) or Dolby enabled speakers (surround back) which are both types of height speakers. Dolby enabled speakers are special speakers designed to face the ceiling so that sound is heard after bouncing off the ceiling so that sound appears to be coming from overhead. By installing height speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound including overhead sounds, when the input format is Dolby Atmos.

Place them either above the front speakers, above the surround speakers or above surround back speakers.

- You can connect both surround back speakers and height speakers. However, you can only output audio from one of these at a time. See "Speaker combinations" (P14) for details.

9,10 Height Speakers

Choose one of the following:

- Dolby Enabled Speakers (Front)
- Dolby Enabled Speakers (Surround)
- Dolby Enabled Speakers (Surround Back)
Bi-Amping the Speakers

With a 5.1 channel system, it is possible to connect front speakers that support Bi-Amping to improve the quality of the bass and treble. Bi-Amping compatible speakers need their terminals for the tweeters connected to one amplifier and their terminals for woofers connected to another amplifier, so it is not possible to connect height speakers and surround back speakers with this connection. Other than front speakers, you can also connect a center speaker, surround speakers, and a powered subwoofer.

* "Speaker combinations" (P14) introduces some detailed examples of speaker combinations.

1,2 Front Speakers (Bi-Amping)
3 Center Speaker
4,5 Surround Speakers
6 Powered Subwoofer

* 1: 22° to 30°, * 2: 120°
Speaker combinations

In any of the combinations, up to two powered subwoofers can be connected.

* Press on the remote control (P6) and use "Other" - "Speakers" to switch speakers A and B and to switch between surround back speakers and height speakers.

*(¹) You can select one of Speaker B, Bi-AMP, or ZONE SPEAKER.
*(²) When using Speakers B, no sound is played from the surround back speakers when playing from A+B.
*(³) No sound is played from the height speakers when playing audio from ZONE SPEAKER.
*(⁴) You can connect both surround back speakers and height speakers. However, you can only output audio from one of these at a time. When both are connected, you can set which speakers to prioritize.
Step2: Connect the Speakers

Standard Connections (Pages 8 to 12)

Connect 12345678 for a 7.1 channel system. Connect 1234569: for a 5.1.2 channel system. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER PRE OUT jacks.

- You can also connect both 7 and 9. However, you can only output audio from one of these at a time. When both are connected, you can switch which speakers to prioritize. Press \( \text{ } \) on the remote control (P6) and use "Other" - "Speakers" to switch between surround back speakers and height speakers and to switch speakers A and B.

Setup

- Settings for the speaker configuration you have connected need to be made in "1. Full Auto MCACC" in Initial Setup (P26).

Make sure the exposed speaker cables do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.

a Speaker Cable, b Subwoofer Cable
Connecting with Bi-Amping Speakers (Page 13)

Make sure you remove the jumper bar fitted between the woofer jacks and tweeter jacks of the front speakers. Refer to "Standard Connections (Pages 8 to 12)" (P15) to connect the center speaker, surround speakers, and powered subwoofer.

- Also refer to the instruction manual for your speakers when using connections for Bi-Amping.

Setup
- Settings for the speaker configuration you have connected need to be made in "1. Full Auto MCACC" in Initial Setup (P26).

Make sure the exposed speaker cables do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.
Step3: Connect the TV & AV Components

1. Connect the TV

To ARC TV
For a TV that supports the ARC (Audio Return Channel) feature (*1), use an HDMI cable and connect according to illustration "a". Choose an HDMI IN jack on the TV that supports ARC when connecting.

Setup
- Settings are required to use the ARC function. Select "Yes" in "5. Audio Return Channel" (P26) in the Initial Setup.
- Refer to the instruction manual for the TV for TV connections and instructions regarding settings for CEC features and audio output.

To Non-ARC TV
For a TV that does not support the ARC (Audio Return Channel) feature (*1), connect both the HDMI cable in illustration "a" and the digital optical cable in "b".
- Connection with a digital optical cable is not necessary if you will watch TV through a device such as a cable set-top box (that is, not use a tuner built into the TV) that you have connected to the input jack on this unit.

(*1) The ARC feature: This feature transfers TV audio signals via HDMI cable so that you can play the audio from the TV through this unit. Connection to an ARC compatible TV is complete with one HDMI cable. Refer to the instruction manual for your TV to see if it supports ARC.

(*2) Another TV or projector can be connected to the HDMI OUT SUB jack. Press ` (P6) on the remote control and use "Other" - "HDMI Out" to switch between MAIN and SUB. Note that this jack does not support ARC.
2. Connect the HDMI AV Component

This is an example of connection with an AV component that has an HDMI jack. With connection to an AV component that conforms with the CEC (Consumer Electronics Control) standard, you can use features such as the HDMI CEC feature (*) that links with the input selector, and the HDMI Standby Through feature which allows you to play video and audio from AV components on the TV even when this unit is in standby mode.

- To play 4K or 1080p video, use a high speed HDMI cable.

Setup
- When "Yes" is selected for "5. Audio Return Channel" in Initial Setup (P26), the HDMI CEC function and HDMI Standby Through function are automatically enabled. If "No, Skip" is selected, settings are required in the System Setup menu after Initial Setup is complete. Settings are made in "System Setup" - "Hardware" - "HDMI" in Home displayed by pressing on the remote controller.
- To enjoy digital surround sound including Dolby Digital, audio output should be set to Bitstream output on the connected Blu-ray Disc player or other device.

(*) The HDMI CEC feature: You can control features such as linking input switching with the input selector and players conforming to the CEC standard, switching audio to output it from the TV or from this unit, and adjusting the volume using the remote controller of a CEC-compliant TV, and automatically switching this unit to standby when the TV is turned off.
3. Connect the Non-HDMI AV Component

This is an example of connection with an AV component that does not have an HDMI jack. Make the connections to the AV component to match the jacks it has. When video input connection is to the BD/DVD jack, the audio input connection should also be to the BD/DVD jacks, and so on, so that you connect the video input jacks to the jacks with the same name as the audio input jacks. Note that video signals input to the VIDEO IN jack or the COMPONENT VIDEO IN jack will be converted to HDMI video signals and then output from the HDMI OUT jack.

To enjoy digital surround playback in formats such as Dolby Digital, you need to make a connection for audio signals with a digital coaxial cable or a digital optical cable.

It is possible to change assignment of the input jacks you see in the illustration at left, so you can also connect to any jack other than BD/DVD. For details, see the Advanced Manual.

Setup
- The COMPONENT VIDEO IN jacks are compatible only with 480i or 576i resolution. When you connect to the COMPONENT VIDEO IN jacks, set the output resolution of the player to 480i or 576i. Select interface if there is no option for 480i, etc. If your player does not support 480i or 576i output, use the VIDEO IN jack.
- To enjoy digital surround sound including Dolby Digital, audio output should be set to Bitstream output on the connected Blu-ray Disc player or other device.
4. Connect the Audio Component

Example of a connection with an audio component. Connect a CD player using a digital coaxial cable or an analog audio cable. You can also connect a turntable that has an MM-type cartridge to the PHONO jack.

- If the turntable has a built-in audio equalizer, connect it to an AUDIO IN jack other than the PHONO jack. Further, if the turntable uses an MC type cartridge, install an audio equalizer compatible with the MC type cartridge between the unit and the turntable, then connect to any AUDIO IN jack other than the PHONO jack.

If the turntable has a ground wire, connect it to the SIGNAL GND terminal of this unit.

**a** Analog Audio Cable, **b** Digital Coaxial Cable
5. Multi-zone Connection-1 (ZONE 2 TV)

You can enjoy content from a Blu-ray Disc player on a TV equipped with an HDMI input jack in the separate room (ZONE 2) by playing a Blu-ray Disc player in the main room (where this unit is located), or play the content from another AV component. Only the video from devices connected to the HDMI IN1 to IN3 jacks can be played on the TV in the separate room.

Setup
- Settings are required in Initial Setup, "4. Multi Zone Setup" (P26) to enjoy this feature.
- The audio from externally connected AV components can only be output when the signal is 2ch PCM audio. It may also be necessary to convert the audio output of the AV component to PCM output.
6. Multi-zone Connection-2 (ZONE 2 PRE/LINE OUT)

You can enjoy 2ch audio in the separate room through speakers connected to a pre-main amplifier or power amplifier by, for example, playing a Blu-ray Disc player in 7.1ch in the main room (where this unit is located) and listening to internet radio in the separate room (ZONE 2). Connect the ZONE 2 PRE/LINE OUT jacks of the unit and the LINE IN jacks of the pre-main amplifier or power amplifier in a separate room with an analog audio cable.

- DSD and Dolby TrueHD audio signals are not output to ZONE 2 when selected with the "NET" or "USB" input selector.

Connections with an AV component

Connect with HDMI IN 1 to 3 if you want to output an external AV component to ZONE 2. If the AV component doesn’t have an HDMI jack, connect using a digital optical cable, digital coaxial cable, or analog audio cable. If any of these are already used, you do not have to connect using any of the others.

Setup

- Settings are required in Initial Setup, “4. Multi Zone Setup” (P26) to enjoy this feature.
- The audio from externally connected AV components can only be output when the audio is analog or 2ch PCM audio signals. If you have connected to this unit with an HDMI cable or digital optical/coaxial cable, it may be necessary to convert the audio output of the AV component to PCM output.
7. Multi-zone Connection-3 (ZONE SPEAKER)

You can enjoy 2ch audio in the separate room by, for example, playing a Blu-ray Disc player in the main room (where this unit is located) and listening to internet radio through the speakers in the separate room (ZONE 2).

- You cannot use ZONE SPEAKER if you have connected the front speakers using Bi-Amping connection or if you have connected a Speaker B System.
- No sound is played from the height speakers when playing audio from ZONE SPEAKER.
- DSD and Dolby TrueHD audio signals are not output to ZONE 2 when selected with the "NET" or "USB" input selector.

Connections with an AV component

Connect with HDMI IN 1 to 3 if you want to output an external AV component to ZONE 2. If the AV component doesn't have an HDMI jack, connect using a digital optical cable, digital coaxial cable, or analog audio cable. If any of these are already used, you do not have to connect using any of the others.

Setup

- Settings are required in Initial Setup, "4. Multi Zone Setup" (P26) to enjoy this feature.
- The audio from externally connected AV components can only be output when the audio is analog or 2ch PCM audio signals. If you have connected to this unit with an HDMI cable or digital optical/coaxial cable, may be necessary to convert the audio output of the AV component to PCM output.
8. Connect Other Cables

Antenna Hookup

Move the antenna around while playing the radio to find the position with the best reception. Use a thumb tack or similar to attach the indoor FM antenna to a wall.

Network Hookup

Connect this unit to the network using wired LAN or Wi-Fi (wireless LAN). You can enjoy network features such as internet radio by connecting the unit to the network. If you connect by wired LAN, connect with an Ethernet cable to the NETWORK port as shown in the illustration. To connect by Wi-Fi, then after selecting "Wireless" in "3. Network Connection" (P26) in Initial Setup, select the desired setting method and follow the onscreen instructions to configure the connection.

Power Cord Hookup

This unit includes a removable power cord. Connect the power cord to the power outlet after completing all other connections. Connect the power cord to AC IN of the unit and then connect to the outlet. Always disconnect the outlet side first when disconnecting the power cord.

You can find the voltage selector switch on the rear panel of multi-voltage models. Please set it to the correct voltage for your country or region. Before changing the voltage, disconnect the power cord. Use a medium size screwdriver to change the voltage switch.

a AM loop antenna, b Indoor FM antenna, c Ethernet Cable, d Power Cord
Initial Setup with Auto Start-up Wizard

Initial Setup Starts Automatically

When you turn the unit on for the first time after purchasing it, Initial Setup is automatically shown on the TV to enable you to make settings required for startup using simple operations following onscreen guidance.
1. Switch the input on the TV to that assigned to the unit.
2. Put batteries into the remote controller of this unit.
3. Press \( \text{Í} \) on the remote controller to turn the unit on.
4. Select the item with the cursors of the remote controller and press ENTER (a) to confirm your selection. To return to the previous screen, press  (b).

- If you terminate the procedure on the way or want to change a setting made during Initial Setup, press \( \text{Í} \) on the remote controller, and from the Home select "System Setup" - "Miscellaneous" - "Initial Setup", and press ENTER.
- While setting up the network, screens asking you to accept the Onkyo Group privacy policy and agree to the privacy policies required to use the Chromecast built-in feature are displayed. Select "Accept" and press ENTER to indicate agreement. For information on the settings required to use the Chromecast built-in feature and the operations to play it, refer to the included Chromecast built-in instruction sheet.
1. Full Auto MCACC

Place the supplied speaker setup microphone in the listening position, measure the test tones emitted by the speakers, and then the unit automatically sets the optimum volume level for each speaker, the crossover frequencies, and the distance from the listening position. It also adjusts the volume of the separate frequency ranges for each speaker so that the frequency balance over the entire system is adjusted.

- Calibration takes between 3 and 12 minutes to be completed. The speakers emit the test tone at high volume during measurement, so be careful of your surroundings. Keep the room as quiet as possible during measurement.
- If you have connected a subwoofer, check the power and volume of the subwoofer. Set the subwoofer volume to more than halfway.
- If the power of this unit suddenly turns off, the speaker cables may have touch the rear panel or other wires and tripped the protection circuit. Twist the wires again properly and make sure they do not stick out of the speaker terminals when connecting.

1. Place the supplied speaker setup microphone in the listening position, and connect to the MCACC SETUP MIC jack on the main unit.
2. Select the connected speaker configuration.
3. Test tones are emitted by the speakers, and firstly the unit detects the speakers connected and the noise in the environment.
4. After the results of the above measurements are displayed, select "Next", press ENTER on the remote controller, and the test tones are emitted again, and the unit automatically makes settings such as the optimum volume level and the crossover frequency.
5. When the measurement is completed, the measurement result is displayed. Press the cursors on the remote controller to check the settings. Press ENTER when "Save" is selected to save the settings.
6. Disconnect the speaker setup microphone.

2. Source Connection

Check that each input source is connected correctly. Follow the guidance, select the input you want to confirm, start play of the selected player, and confirm that the images appear on the TV and that sound is played.

3. Network Connection

Set up Wi-Fi connection with an access point such as a wireless LAN router. There are the following two methods of connecting by Wi-Fi:
- "Scan Networks": Search for an access point from this unit. Find out the SSID of the access point beforehand.
- "Use iOS Device (iOS7 or later)": Share the iOS device's Wi-Fi settings with this unit.

If you select "Scan Networks", there are a further two choices of connection method. Check the following.
- "Enter Password": Enter the password (or key) of the access point to connect.
- "Push Button": If the access point has an automatic connection button, you can connect without entering a password.

If the SSID of the access point is not displayed, then in the screen listing the SSIDs, select "Other..." with the cursor on the remote controller and press ENTER, then follow the onscreen instructions.

Keyboard Input

To switch between upper and lower case, select "A/a" on the screen and press ENTER. To select whether to mask the password with "*" or display it in plain text, press +Fav on the remote controller. Press CLEAR to delete all the input characters.

4. Multi Zone Setup

Make these settings to enjoy video and audio in a room other than the main room (ZONE 2). Select "Using AV Receiver" when connecting speakers in the separate room. Select "with External Premain Amplifier" when connecting a pre-main amplifier in the separate room. Select "with External Power Amplifier" when connecting a power amplifier. If you are going to be connecting a TV in the separate room (ZONE 2), then when "Would you be using TV in 2nd room?" is displayed, select "Yes".

5. Audio Return Channel

If you have connected a TV that supports ARC, select "Yes". This unit's ARC setting turns on and you can listen to the TV's audio through this unit.
- If you select "Yes", the HDMI CEC function is enabled and power consumption increases during standby.
AV Component Playback

Basic Operations
You can play the audio from AV components such as Blu-ray Disc players through this unit.
- When a TV is connected to the HDMI OUT SUB jack, press \( \text{(P6)} \) on the remote controller and use "Other" - "HDMI Out" to switch between MAIN and SUB.

Perform the following procedure when the unit is on.
1. Switch the input on the TV to that assigned to the unit.
2. Press the input selector button (a) on the remote controller with the same name as the jack to which you connected the player to switch the input. For example, press BD/DVD to play the player connected to the BD/DVD jack.
3. Start play on the AV component.

When the CEC link function works, the input switches automatically when you have connected a CEC compliant TV and player to this unit using HDMI connection.

BLUETOOTH® Playback

You can wirelessly play music on a smartphone or other BLUETOOTH enabled device. Perform the following procedure when the unit is on.

Pairing
1. When you press the BT AUDIO button, "Now Pairing..." is displayed on this unit's display, and the pairing mode is enabled.
2. Enable (turn on) the BLUETOOTH function of the BLUETOOTH enabled device, then select this unit from amongst the devices displayed. If a password is requested, enter "0000".
   - This unit is displayed as "Pioneer SC-LX502 XXXXXX".
   - To connect another BLUETOOTH enabled device, press and hold BT AUDIO until "Now Pairing..." is displayed, then perform step 2. This unit can store the data of up to 8 paired devices.
   - The coverage area is 48’/15 m. Note that connection is not always guaranteed with all BLUETOOTH enabled devices.

Playing Back
1. Perform the connection procedure on the BLUETOOTH enabled device. The input on this unit automatically switches to "BLUETOOTH".
2. Play music. Increase the volume of the BLUETOOTH enabled device to an appropriate level.
   - Due to the characteristics of BLUETOOTH wireless technology, the sound produced on this unit may slightly be behind the sound played on the BLUETOOTH enabled device.
Network Functions

Basic Operations

By connecting this unit to the network you can enjoy internet radio services such as TuneIn, streaming from Spotify Connect, and wireless playback using the Chromecast built-in feature and AirPlay®. Furthermore, you can use the Music Server feature to stream music files stored on PCs or NAS devices that support the home network feature. The basic operations for Network Functions are introduced in the Basic Manual. For more advanced operations, see the Advanced Manual. There may also be additional network functions provided through firmware updates for this unit. Also see the Advanced Manual for information about new features.

- The network needs to be connected to the internet in order to play internet radio services.
- Depending on the internet radio service, the user may need to register from their computer first.
- To enable Spotify Connect, install the Spotify application on your smartphone or tablet and create a Spotify premium account.
  - Refer to the following for Spotify settings: www.spotify.com/connect/
- The network servers compatible with the Music Server feature are those PCs with players installed that have the server functionality of Windows Media® Player 11 or 12, or NAS that are compatible with home network functionality. Note that with PCs, only music files registered in the library of Windows Media® Player can be played.
- You may need to make some settings on the PC in advance to use Windows Media® Player 11 or 12 with the Music Server feature.

Perform the following procedure when the unit is on.

1. Switch the input on the TV to that assigned to the unit.
2. Press NET (a) on the remote controller to display a list of Network Functions on the TV.
3. Select the Network Function with the cursors of the remote controller and press ENTER (b) to confirm your selection.

With internet radio services, follow the on-screen instructions, using the cursors to select radio stations and programs, then press ENTER to play. With Spotify or AirPlay, select this unit with your smartphone to play. With Music Server, select the server with the cursors, then select the desired music file and press ENTER to play.

- To return to the previous screen, press (c).
You can play music files stored on a USB storage device.

Perform the following procedure when the unit is on.

1. Switch the input on the TV to that assigned to the unit.
2. Plug your USB storage device with the music files into the USB port on the front panel of this unit.
3. Press USB (b) on the remote controller and select "USB".
   - If the "USB" indicator flashes on the display, check whether the USB storage device is plugged in properly.
   - Do not unplug the USB storage device while "Connecting..." is appeared on the display. This may cause data corruption or malfunction.
4. Press ENTER on the remote controller in the next screen. The list of folders and music files on the USB storage device are displayed. Select the folder with the cursors and press ENTER to confirm your selection (a).
5. With the cursors on the remote controller, select the music file, and then press ENTER to start playback.
   - To return to the previous screen, press (c).
   - The USB port of this unit conforms with the USB 2.0 standard. The transfer speed may be insufficient for some content you play, which may cause some interruption in sound.
   - Operation cannot be guaranteed for all USB storage devices.
   - This unit can use USB storage devices that comply with the USB mass storage class standard. The unit is also compatible with USB storage devices using the FAT16 or FAT32 file system formats.
Listening to the AM/FM Radio

You can receive AM and FM radio stations on this unit with the built-in tuner. Perform the following procedure when the unit is on.

## Tuning into a Radio Station

### Tuning Automatically

1. Press TUNER (a) on the remote controller repeatedly to select either "AM" or "FM" on the display.
2. Press MODE (e) on the remote controller, so that the "TunMode : Auto" is displayed on the display.
3. When you press the cursors y/z (b) on the remote controller, automatic tuning starts, and searching stops when a station is found. When tuned into a radio station, the "TUNED" indicator on the display lights. When tuned into an FM stereo station, the "STEREO" indicator lights.

When FM broadcasts reception is poor: Perform the procedure for "Tuning Manually" in the following section. Note that if you tune manually, the reception for FM broadcasts will be monaural rather than stereo, irrespective of the sensitivity of the reception.

### Tuning Manually

Note that if you tune manually, the reception for FM broadcasts will be monaural rather than stereo, irrespective of the sensitivity of the reception.

1. Press TUNER (a) on the remote controller repeatedly to select either "AM" or "FM" on the display.
2. Press MODE (e) on the remote controller, so that the "TunMode : Manual" is displayed on the display.
3. While pressing the cursors y/z (b) on the remote controller, select the desired radio station.

The frequency changes by 1 step each time you press the cursors y/z. The frequency changes continuously if the button is held down and stops when the button is released.

**Frequency step setting:**

Press on the remote controller, and from Home displayed select "System Setup" - "Miscellaneous" - "Tuner" - "AM/FM Frequency Step" or "AM Frequency Step", and select the frequency step for your region. Note that when this setting is changed, all radio presets are deleted.
Presetting a Radio Station
It allows you to register up to 40 of your favorite AM/FM radio stations.

Registration Procedure
After tuning into the AM/FM radio station you want to register, perform the following procedure.
1. Press +Fav (d) on the remote controller so that the preset number on the display flashes.
2. While the preset number is flashing (about 8 seconds), repeatedly press the cursors / on the remote controller to select a number between 1 and 40.
3. Press +Fav again on the remote controller to register the station. When registered, the preset number stops flashing. Repeat this procedure for all of your favorite AM/FM radio stations.

Selecting a Preset Radio Station
1. Press TUNER (a) on the remote controller.
2. Press cursors / (b) on the remote controller to select a preset number.

Deleting a Preset Radio Station
1. Press TUNER (a) on the remote controller.
2. Press cursors / (b) on the remote controller to select the preset number to delete.
3. After pressing +Fav (d) on the remote controller, press CLEAR (c) while the preset number is flashing to delete the preset number. When deleted, the number on the display goes off.

Using RDS (European, Australian and Asian models)
RDS stands for Radio Data System and is a method of transmitting data in FM radio signals. In regions using RDS, the radio station name is displayed when you tune into a radio station broadcasting program information. When you press on the remote controller in this state, you can use the following functions.

Display Text Information (Radio Text)
1. While the name of the station is being displayed on the display, press on the remote controller once. Radio Text (RT) broadcast by the station is displayed scrolling across the display. “No Text Data” is displayed when no text information is available.

Search for Stations by Program Type
1. While the name of the station is being displayed on the display, press on the remote controller twice.
2. Press / (b) on the remote controller to select the Program Type you want to find, then press ENTER to start the search.
• The Program Types displayed are as follows: None / News (News reports) / Affairs (Current affairs) / Info (Information) / Sport / Educate (Education) / Drama / Culture / Science (Science and technology) / Varied / Pop M (Pop music) / Rock M (Rock music) / Easy M (Middle of the road music) / Light M (Light classics) / Classics (Serious classics) / Other M (Other music) / Weather / Finance / Children (Children’s programmes) / Social (Social affairs) / Religion / Phone In / Travel / Leisure / Jazz (Jazz music) / Country (Country music) / Nation M (National music) / Oldies (Oldies music) / Folk M (Folk music) / Document (Documentary)
• The information displayed may sometimes not match the content being broadcast by the station.
3. When a station is found, the station flashes on the display. Press ENTER while this is happening to start receiving that station. If you don’t press ENTER, the unit continues to search for another station.
• If no stations are found, the message “Not Found” is displayed.

Unusual characters may be displayed when the unit receives unsupported characters. However, this is not a malfunction. Also, if the signal from a station is weak, information may not be displayed.
Multi-zone

Basic Operations
You can enjoy audio in the separate room by, for example, playing a Blu-ray Disc player in the main room (where this unit is located) and listening to internet radio in the separate room (ZONE 2).
- DSD and Dolby TrueHD audio signals are not output to ZONE 2 when selected with the "NET" or "USB" input selector.
- You can only select the same inputs for the main room and separate room with the "NET", "BLUETOOTH", or "USB" input selector. If you have "NET" selected in the main room and then select "BLUETOOTH" in the separate room, the main room also switches to "BLUETOOTH". You cannot select different stations for the main room and separate room with the AM/FM radio.
- Power consumption in standby mode increases when the multi-zone function is being used.

Perform the following procedure when the unit is on.

1. While holding down MODE (e) on the remote controller, press ZONE 2 (d) for 3 or more seconds until the remote indicator blinks twice.
   - The remote controller switches to the mode for controlling ZONE 2.
2. Point the remote controller at the main unit and press Í (a). "Z2" lights on the main unit display.
3. Press the input selector button (b) of the input to be played in the separate room.
   - On the main unit, after pressing ZONE CONTROL, within 8 seconds turn the INPUT SELECTOR dial to select the input to be played in the separate room.
4. To adjust the volume on the power amplifier in the separate room or the ZONE speaker, adjust with VOL+/– on the remote controller. To control on the main unit, press ZONE CONTROL and adjust with the MASTER VOLUME dial within 8 seconds.
   - Adjust the volume on the pre-main amplifier if you have connected with a pre-main amplifier in the other room.
   - The information for a connected device can be displayed on the TV screen in a separate room. Press the button while the remote controller is in the mode for controlling ZONE 2.

To turn off the function:
Press Í while in the mode for controlling ZONE 2 on the remote controller.

Playing in ZONE 2 only:
If you turn the unit to standby during multi-zone playback, the Z2 indicator is dimmed and the playback mode is switched to playback in a separate room only. Setting ZONE 2 to on while this unit is in standby will also switch the playback mode to the same setting.
MULTI-ZONE MUSIC
If you press MULTI-ZONE MUSIC on the main unit while playback is being performed in the main room, “Z2” on the display lights, the MULTI-ZONE MUSIC is turned on, and the playback source in the separate room is switched to the same source immediately.
- The sources that can be played in ZONE 2 can be played in all rooms.
- This function cannot be used if headphones are connected or audio is output from the speakers of the TV.

To return the remote controller to main room control mode:
While holding down MODE on the remote controller, press MAIN (c) for 3 seconds or more until the remote indicator flashes once.
Listening Mode

This unit is equipped with a variety of listening modes. The basic operations are introduced in the Basic Manual. For more details, see the Advanced Manual.

- The listening mode last selected for the source is remembered for each of the AUTO/DIRECT, SURR, and STEREO buttons. If content you play is not supported by the listening mode you selected last, the listening mode that is standard for that content is selected automatically.

AUTO/DIRECT button (a)
Press repeatedly and the listening modes suited to the input signal are switched between "Auto Surround", "Direct", and "Pure Direct". After selecting one of them, "Auto Surround" (or "Direct" or "Pure Direct") is displayed on the display of the main unit, then the listening mode selected automatically (Dolby Digital for multi-channel input signals, Stereo for 2 channel input signals, etc.) is displayed. The "Direct" mode shuts down some processing that can affect sound quality, such as the tone control features, so you can enjoy even better sound quality. The "Pure Direct" mode shuts down even more processes that affects sound quality, so you get a more faithful reproduction of the original sound. In this case, the speaker calibration made with MCACC is disabled.

Depending on the input signal and speaker configuration, the Dolby Surround and DTS Neural:X modes that expand 2 channel and 5.1 channel input signals to 5.1 or 7.1 channels may be automatically selected.

SURR button (c)
You can select a variety of listening modes to suit your taste. There are the Dolby Digital, DTS-HD Master Audio, and Stereo modes that you can choose to suit the input signal, or the Dolby Surround and DTS Neural:X modes that can expand 2 channel and 5.1 channel input signals to 5.1 or 7.1 channels. You can also enjoy original surround modes such as Ext.Stereo and Drama modes.

STEREO button (d)
You can select the “Stereo” mode to playback only from the front speakers and subwoofer.

Checking the Input Format and Listening Mode
Press  (b) on the remote controller several times to switch the display of the main unit as follows.
