The Basic Manual includes information needed when starting up and also instructions for frequently used operations. The Advanced Manual has more detailed information and advanced settings.
What's in the box

1. Main unit (1)
2. Remote controller (RC-957R) (1), Batteries (AAA/R03) (2)
3. Speaker setup microphone (1) • Used during Initial Setup.
4. Indoor FM antenna (1)
5. AM loop antenna (1) • Quick Start Guide (1) • Basic Manual (This manual)

- Connect speakers with 4 Ω to 16 Ω impedance.
- The power cord must be connected only after all other cable connections are completed.
- We will not accept responsibility for damage arising from the connection of equipment manufactured by other companies.
- Functionality may be introduced by firmware updates and service providers may cease services, meaning that some network services and content may become unavailable in the future. Furthermore, available services may vary depending on your area of residence.
- Details on the firmware update will be posted on our website and through other means at a later date.
- Specifications and appearance are subject to change without prior notice.
Part Names

Front Panel

1. INPUT SELECTOR dial: Switch the input to be played.
2. MCACC indicator: This lights when you have enabled the speaker calibration made with MCACC (P21).
3. FL OFF indicator: This lights when you have pressed DIMMER repeatedly to turn the display off.
4. DIMMER button: You can switch the display off or adjust the brightness of the display in three steps.
5. TUNING MODE button: Switches tuning to an AM/FM station between automatic tuning and manual tuning.
6. +FAVORITE button: Used to register AM/FM radio stations.
7. HOME MENU button: Displays the Home. (*)
8. Display (P4)
9. Cursor buttons (↑ / ↓ / ← / →) and ENTER button: Select the item with the cursors and press ENTER to confirm. Use them to tune to stations when using TUNER (P26).
10. NETWORK indicator: This lights when "NET" is selected with the input selector and the unit is connected to the network. If the unit is in standby mode, this lights when functions such as HDMI CEC and network standby are enabled.
11. WIRELESS indicator: Lights when the unit is connected to the wireless network.
12. Remote control sensor: Receives signals from the remote controller.
   • The signal range of the remote controller is within about 16’/5 m, at an angle of 20° on the perpendicular axis and 30° to either side.
13. RETURN button: Returns the display to the previous state.
14. MASTER VOLUME
15. STANDBY/ON button
16. PHONES jack: Headphones with a standard plug (Ø1/4”/6.3 mm) are connected.
17. MCACC SETUP MIC jack: The supplied speaker setup microphone is connected.
18. Listening mode button: Press "AUTO/DIRECT", "SURROUND" or "STEREO" to switch the listening mode (P28). (*)

19. SOUND RETRIEVER button: Turns on/off the Sound Retriever function that provides better sound quality for compressed audio.

20. PURE DIRECT button: Switches to the Pure Direct mode. (P28)

21. USB port: A USB storage device is connected so that music files stored in it can be played. You can also supply power (5 V/500 mA) to USB devices with a USB cable.

22. AUX INPUT jack: Connect a video camera, etc., using a stereo mini plug cable (Ø1/8"/3.5 mm).

(*) You can find details in the Advanced Manual.

Display

1. This may light when performing operations with the "NET", "USB" input selector.

2. Lights in the following conditions.
   - When connected by BLUETOOTH.
   - When connected by Wi-Fi.
   - NET: When "NET" is selected with the input selector and the unit is connected to the network. It will flash if the connection to the network is not correct.
   - USB: When "USB" is selected with the input selector and the unit is connected by USB and the USB device is selected. Flashes if the USB is not properly connected.
   - HDMI: When HDMI signals are input and the HDMI input is selected.
   - DIGITAL: When digital signals are input and the digital input is selected.

3. Lights according to the type of input digital audio signals and the listening mode.

4. Lights in the following conditions.
   - RDS (European, Australian and Asian models): Receiving RDS broadcasting.
   - TUNED: Receiving AM/FM radio.
   - STEREO: Receiving FM stereo.
   - SLEEP: When the sleep timer is set.
   - AUTO STBY: Auto Standby is on.

5. Lights when headphones are connected.

6. Flashes when muting is on.

7. Displays various information of the input signals.

8. Lights when adjusting the volume.

9. Speaker/Channel display: Displays the output channel that corresponds to the selected listening mode.
Rear Panel

1. DIGITAL AUDIO IN OPTICAL/COAXIAL jacks: Input TV or AV component digital audio signals with a digital optical cable or digital coaxial cable.
2. VIDEO IN jacks: Input the AV component video signals with an analog video cable.
3. NETWORK port: Connect to the network with an Ethernet cable.
4. USB port: A USB storage device is connected so that music files stored in it can be played. You can also supply power (5 V/500 mA) to USB devices with a USB cable.
5. Wireless antenna: Used for Wi-Fi connection or when using a BLUETOOTH enabled device. Adjust their angles according to the connection status.
6. HDMI OUT jacks: Transmit video signals and audio signals with a HDMI cable connected to a TV.
7. HDMI IN jacks: Transmit video signals and audio signals with a HDMI cable connected to an AV component.
8. Power cord
9. SIGNAL GND terminal: The ground wire of the turntable is connected.
10. AUDIO IN jacks: Input AV component audio signal with an analog audio cable.
11. ANTENNA AM LOOP/FM UNBAL 75Ω terminal: The supplied antennas are connected.
12. SUBWOOFER PRE OUT jack: Connect a powered subwoofer with a subwoofer cable. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER PRE OUT jacks.
13. SPEAKERS terminals: Connect speakers with speaker cables. (North American models are banana plug ready.)
Remote Controller

1. ø STANDBY/ON button
2. Input selector buttons: Switches the input to be played.
3. ◀▶ button: Select the input to be played.
4. \( A V \) button: Press during play to display the AV Adjust on the TV and display to adjust sound quality, etc. Note that there is no display on the TV screen when the input selector is "CD", "TV", "PHONO", "AM", or "FM". so follow the display on the main unit while doing the operations. (*)
5. Cursor buttons and ENTER button: Select the item with the cursors and press ENTER to confirm your selection. When the folder or file lists are not shown on one screen on the TV, press ◀ / ▶ to change the screen.
6. • button: Displays the Home. (*)
7. Volume buttons
8. ◯ button: Temporarily mutes audio. Press again to cancel muting.
9. LISTENING MODE buttons: Allows you to select the listening mode (P28). (*)
10. Play button: Used for play operations when playing Music Server or USB.
11. ● button: Used for repeat or random play operations when playing Music Server or USB. Each time you press the button, the mode switches from 1 (1-track repeat) to 2 (folder repeat), to 3 (random).
   CLEAR button: Deletes all characters you have entered when entering text on the TV screen.
12. ◄ button: Switches the information on the display and is used to operate RDS (P27).
13. ◀ button: Returns the display to the previous state.
14. MODE button: Switches tuning to an AM/FM station between automatic tuning and manual tuning.
15. +Fav button: Used to register AM/FM radio stations.
   • MAIN and ZONE are not used.

(*) You can find details in the Advanced Manual.
This unit can be used in a number of ways, depending on the layout of the speakers you are installing, and the connections made to external devices. Read the following to help make the installation process smoother.

**Step1: Speaker Layout**

Select the speaker layout that suits the types of speakers you have and the conditions they will be used in from the choices presented on pages P8 to P12, then install the speakers by referring to the illustrations and explanations on the relevant page. Speaker layouts include systems that use surround back speakers, systems that use height speakers, and systems that use Bi-Amping speakers. Also refer to the combinations available in "Speaker combinations" on P13.

**Step2: Connect the Speakers**

To connect the speaker systems to this unit, refer to P14 if you are using a speaker layout described on one of P8 to P11, and to P15 to use a speaker layout using Bi-Amping speakers described on P12. The connection process will be smoother if you refer to the illustrations and explanations and prepare the required cables before hand.

**Step3: Connect the TV & AV Components**

Refer to P16 to P20 to connect your external devices such as your TV, Blu-ray Disc Player, and also supplied accessories such as the antennas. The connection process will be smoother if you refer to the illustrations and explanations, confirm the connection types on the external devices, and prepare the required cables before hand.
Step1: Speaker Layout

7.1 Channel System

Front speakers output front stereo sound and a center speaker outputs center sound such as dialogs and vocals. Surround speakers create back sound field. Powered subwoofer reproduces bass sounds and creates rich sound field. This basic 5.1 Channel System with surround back speakers added is called a 7.1 Channel System. The connection of surround back speakers improves the sense of envelopment and connectivity of sound created by the back sound field and provides a more real sound field. Furthermore, by installing surround back speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound, when the input format is Dolby Atmos.

The front speakers should be positioned at ear height, while the surround speakers should be positioned just above ear height. Center speaker should be set up facing the listening position. Placing the powered subwoofer between the center speaker and a front speaker gives you a natural sound even when playing music. The optimal positioning is for surround back speakers to be at ear height.

- If you are including surround back speakers in the setup, surround speakers are required.

1,2 Front Speakers
3 Center Speaker
4,5 Surround Speakers
6 Powered Subwoofer
7,8 Surround Back Speakers
5.1.2 Channel System-1
(Front High Speakers/Rear High Speakers)

This is a basic 5.1 channel system consisting of front speakers, a center speaker, surround speakers, and a powered subwoofer, with the addition of front height speakers or rear high speakers, which are both types of height speakers. By installing height speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound including overhead sounds, when the input format is Dolby Atmos.

Front high speakers or rear high speakers should be situated at least 3´/0.9 m higher than the front speakers. Front high speakers should be situated directly above the front speakers and the distance between the rear high speakers should match the distance between the front speakers. Both should be set up facing the listening position.

7,8 Height Speakers
Choose one of the following:
• Front High Speakers
• Rear High Speakers
5.1.2 Channel System-2
(Ceiling Speakers)

This is a basic 5.1 channel system consisting of front speakers, a center speaker, surround speakers, and a powered subwoofer, with the addition of top front speakers, top middle speakers, or top rear speakers, which are types of height speakers. By installing height speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound including overhead sounds, when the input format is Dolby Atmos.

Fit top front speakers on the ceiling forward of the seating position, top middle speakers on the ceiling directly above the seating position, and top rear speakers on the ceiling behind the seating position. The distance between each pair should match the distance between the two front speakers.

- Dolby Laboratories recommends placing this type of height speakers to obtain the best Dolby Atmos effect.

7,8 Height Speakers
Choose one of the following:
- Top Front Speakers
- Top Middle Speakers
- Top Rear Speakers

*1: 30˚ to 55˚, *2: 65˚ to 100˚, *3: 125˚ to 150˚
This is a basic 5.1 channel system consisting of front speakers, a center speaker, surround speakers, and a powered subwoofer, with the addition of Dolby enabled speakers (front) or Dolby enabled speakers (surround), which are both types of height speakers. Dolby enabled speakers are special speakers designed to face the ceiling so that sound is heard after bouncing off the ceiling so that sound appears to be coming from overhead. By installing height speakers, you can select the Dolby Atmos listening mode, which realizes the most up-to-date 3D sound including overhead sounds, when the input format is Dolby Atmos.

Place them either above the front speakers or above the surround speakers.

7,8 Height Speakers
Choose one of the following:
- Dolby Enabled Speakers (Front)
- Dolby Enabled Speakers (Surround)
Bi-Amping the Speakers

It is possible to connect front speakers supporting bi-amping to improve quality of the bass and treble. The maximum number of channels available with this connection is 5.1 because Bi-Amping speakers require one amplifier for the tweeter jacks and one amplifier for the woofer jacks. Other than front speakers, you can also connect a center speaker, surround speakers, and a powered subwoofer.

1,2 Front Speakers (Bi-Amping)
3 Center Speaker
4,5 Surround Speakers
6 Powered Subwoofer

*1: 22° to 30°, *2: 120°
### Speaker combinations

- In any of the combinations, up to two powered subwoofers can be connected.

Step2: Connect the Speakers

Standard Connections (Pages 8 to 11)

Make correct connection between the unit's jacks and speaker's jacks (+ to + and – to –) for each channel. If connection is wrong, reverse phase may make bass output poor. Up to two powered subwoofers can be connected. The same signal is output from each of the SUBWOOFER PRE OUT jacks.

Setup
- Settings for the speaker configuration you have connected need to be made in "1. Full Auto MCACC" in Initial Setup (P21).
- If any of the connected speakers have an impedance of 4 Ω or more to less than 6 Ω, after completing Initial Setup, you need to make some settings in the System Setup menu. Press 🛠 on the remote controller, and in the Home displayed set "System Setup" - "Speaker" - "Configuration" - "Speaker Impedance" to “4ohms”.

Make sure the exposed wires of the speakers do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.

a Speaker cable, b Subwoofer cable
Connecting with Bi-Amping Speakers

- Refer to "Standard Connections (Pages 8 to 11)" (P14) to connect the center speaker, surround speakers, and powered subwoofer.

  Make sure you remove the jumper bar fitted between the woofer jacks and tweeter jacks of the front speakers. Make correct connection between the unit's jacks and speaker's jacks (+ to + and – to –) for each channel. If connection is wrong, reverse phase may make bass output poor. Also refer to the instruction manual for your speakers when using connections for bi-amping.

  Make sure the exposed wires of the speakers do not stick out of the speaker terminals when connecting. If the exposed wires of the speakers touch the rear panel or the + and – wires touch each other, the protection circuit will be activated.

Setup

- Settings for the speaker configuration you have connected need to be made in "1. Full Auto MCACC" in Initial Setup (P21).
- If any of the connected speakers have an impedance of 4 Ω or more to less than 6 Ω, after completing Initial Setup, you need to make some settings in the System Setup menu. Press 🛠 on the remote controller, and in the Home displayed set "System Setup" - "Speaker" - "Configuration" - "Speaker Impedance" to "4ohms".
Step3: Connect the TV & AV Components

1. Connect the TV

To ARC TV

For a TV that supports the ARC (Audio Return Channel) (*) feature, use an HDMI cable and connect according to illustration "a". Choose an HDMI IN jack on the TV that supports ARC when connecting.

Setup
- Settings are required to use the ARC function. Select "Yes" in "4. Audio Return Channel" (P22) in the Initial Setup.
- Please refer to the TV’s operation manual for directions on connections and setup for the TV.

To Non-ARC TV

For a TV that does not support the ARC (Audio Return Channel) feature (*), connect both the HDMI cable in illustration "a" and the digital optical cable in "b".
- Connection with a digital optical cable is not necessary if you will watch TV through a device such as a cable set-top box (that is, not use a tuner built into the TV) that you have connected to the input jack on this unit.

(*) The ARC feature:
This feature transfers TV audio signals via HDMI cable so that you can play the audio from the TV through this unit. Connection to an ARC compatible TV is complete with one HDMI cable. Refer to the instruction manual for your TV to see if it supports ARC.
2. Connect the HDMI AV Component

This is an example of connection with an AV component that has an HDMI jack. With connection to an AV component that conforms with the CEC (Consumer Electronics Control) standard, you can use features such as the HDMI CEC feature (*) that links with the input selector, and the HDMI Standby Through feature which allows you to play video and audio from AV components on the TV even when this unit is in standby mode.

- To play 4K or 1080p video, use a high speed HDMI cable.

Setup

- When "Yes" is selected for "4. Audio Return Channel" in Initial Setup (P22), the HDMI CEC function and HDMI Standby Through function are automatically enabled. If "No, Skip" is selected, settings are required in the System Setup menu after Initial Setup is complete. Settings are made in "System Setup" - "Hardware" - "HDMI" in Home displayed by pressing on the remote controller.

- To enjoy digital surround sound including Dolby Digital, audio output should be set to "Bitstream output" on the connected Blu-ray Disc player or other device.

(*) The HDMI CEC feature:
You can control features such as linking input switching with the input selector and players conforming to the CEC standard, switching audio to output it from the TV or from this unit, and adjusting the volume using the remote controller of a CEC-compliant TV, and automatically switching this unit to standby when the TV is turned off.

a HDMI cable
3. Connect the Non-HDMI AV Component

This is an example of connection with an AV component that does not have an HDMI jack. Make the connections to the AV component to match the jacks it has. When video input connection is to the CBL/SAT jack, the audio input connection should also be to the CBL/SAT jacks, and so on, so that you connect the video input jacks to the jacks with the same name as the audio input jacks. Note that video signals input to the VIDEO IN jack will be converted to HDMI video signals and then output from the HDMI OUT jack.

- To enjoy digital surround playback in formats such as Dolby Digital, you need to make a connection for audio signals with a digital coaxial cable or a digital optical cable.
- It is possible to change assignment of the input jacks you see in the illustration at left, so you can also connect to any jack other than CBL/SAT. For details, see the Advanced Manual.

Setup

- To enjoy digital surround sound including Dolby Digital, audio output should be set to “Bitstream output” on the connected Cable/Satellite set-top box or other device.
4. Connect the Audio Component

Example of a connection with an audio component. Connect a CD player using a digital coaxial cable. You can also connect a turntable that has an MM-type cartridge to the PHONO jack.
- If the turntable has a built-in audio equalizer, connect it to another AUDIO IN jack. Further, if the turntable uses an MC type cartridge, install an audio equalizer compatible with the MC type cartridge between the unit and the turntable, then connect to any AUDIO IN jack other than the PHONO jack.

If the turntable has a ground wire, connect it to the SIGNAL GND terminal of this unit.

a Analog audio cable, b Digital coaxial cable
5. Connect Other Cables

Antenna Hookup

Move the antenna around while playing the radio to find the position with the best reception. Use a thumb tack or similar to attach the indoor FM antenna to a wall.

Network Hookup

Connect this unit to the network using wired LAN or Wi-Fi (wireless LAN). You can enjoy network features such as internet radio by connecting the unit to the network. If you connect by wired LAN, connect with an Ethernet cable to the NETWORK port as shown in the illustration. To connect by Wi-Fi, then after selecting "Wireless" in "3. Network Connection" (P22) in Initial Setup, select the desired setting method and follow the onscreen instructions to configure the connection.

Power Cord Hookup

The power cord must be connected only after all other cable connections are completed.

a Indoor FM antenna, b AM loop antenna, c Ethernet cable, d Power cord
Initial Setup with Auto Start-up Wizard

Initial Setup Starts Automatically

When you turn the unit on for the first time after purchasing it, Initial Setup is automatically shown on the TV to enable you to make settings required for startup using simple operations following onscreen guidance.

1. Switch the input on the TV to that assigned to the unit.
2. Put batteries into the remote controller of this unit.
3. Press \( \text{ } \) on the remote controller to turn the unit on.
4. Select the item with the cursors of the remote controller and press ENTER (a) to confirm your selection. To return to the previous screen, press \( \text{ } \) (b).

If you terminate the procedure on the way or want to change a setting made during Initial Setup, press \( \text{ } \) on the remote controller, and from the Home select “System Setup” - “Miscellaneous” - “Initial Setup”, and press ENTER.

1. Full Auto MCACC

Place the supplied speaker setup microphone in the listening position, measure the test tones emitted by the speakers, then the unit automatically sets the optimum volume level for each speaker, the crossover frequencies, and the distance from the listening position. This also automatically adjusts the equalizers for the speakers and enables correction of distortion caused by the acoustic environment of the room.
Calibration takes between 3 and 12 minutes to be completed. The speakers emit the test tone at high volume during measurement, so be careful of your surroundings. Keep the room as quiet as possible during measurement.

If you have connected a subwoofer, check the power and volume of the subwoofer. Set the subwoofer volume to more than halfway.

If the power of this unit suddenly turns off, the wires in the speaker cables may have touched the rear panel or other wires and tripped the protection circuit. Twist the wires again properly and make sure they do not stick out of the speaker terminals when connecting.

1. Place the supplied speaker setup microphone in the listening position, and connect to the MCACC SETUP MIC jack on the main unit.

![MCACC SETUP MIC](image)

When putting the speaker setup microphone on a tripod, refer to the illustration when putting it in place.

2. Select the connected speaker configuration.

The image on the screen changes as you choose the number of channels in "Speaker Channels", so refer to it when performing the settings.

3. Test tones are emitted by the speakers, and firstly the unit detects the speakers connected and the noise in the environment.

4. After the results of the above measurements are displayed, select "Next", press ENTER on the remote controller, and the test tones are emitted again, and the unit automatically makes settings such as the optimum volume level and the crossover frequency.

5. When the measurement is completed, the measurement result is displayed. Press the cursors ▼ / ▲ on the remote controller to check the settings. Press ENTER when "Save" is selected to save the settings.

6. Disconnect the speaker setup microphone.

### 2. Source Connection

Check that each input source is connected correctly. Follow the guidance, select the input you want to confirm, start play of the selected player, and confirm that the images appear on the TV and that sound is played.

### 3. Network Connection

Set up Wi-Fi connection with an access point such as a wireless LAN router. There are the following two methods of connecting by Wi-Fi:

"Scan Networks": Search for an access point from this unit. Find out the SSID of the access point beforehand.

"Use iOS Device (iOS7 or later)"; Share the iOS device’s Wi-Fi settings with this unit.

If you select "Scan Networks", there are a further two choices of connection method. Check the following.

"Enter Password": Enter the password (or key) of the access point to connect.

"Push Button": If the access point has an automatic connection button, you can connect without entering a password.

- If the SSID of the access point is not displayed, then in the screen listing the SSIDs, select "Other..." with the ▼ cursor on the remote controller and press ENTER, then follow the onscreen instructions.

**Keyboard Input**

To switch between upper and lower case, select "A/a" on the screen and press ENTER. To select whether to mask the password with "*
*
*" or display it in plain text, press +Fav on the remote controller. Press CLEAR to delete all the input characters.

- A confirmation screen asking you to agree to the privacy policy is displayed during network setting. Select "Accept" and press ENTER to indicate agreement.

### 4. Audio Return Channel

If you have connected a TV that supports ARC, select "Yes". This unit’s ARC setting turns on and you can listen to the TV’s audio through this unit.
**AV Component Playback**

**Basic Operations**
You can play the audio from AV components such as Blu-ray Disc players through this unit.

Perform the following procedure when the unit is on.
1. Switch the input on the TV to that assigned to the unit.
2. Press the input selector (a) on the remote controller with the same name as the jack to which you connected the player to switch the input.
   - For example, press BD/DVD to play the player connected to the BD/DVD jack.
   - Press TV to listen the TV’s sound. To play a device connected to the STRM BOX, PHONO jack or the AUX INPUT jack on the front panel, press (b) repeatedly to select the input.
3. Start play on the AV component.

- When the CEC link function works, the input switches automatically when you have connected a CEC compliant TV and player to this unit using HDMI connection.

**BLUETOOTH® Playback**

**You can wirelessly play music on a smartphone or other BLUETOOTH enabled device. Perform the following procedure when the unit is on.**

**Pairing**
1. When you press the button, “Now Pairing...” is displayed on this unit’s display, and the pairing mode is enabled.
2. Enable (turn on) the BLUETOOTH function of the BLUETOOTH enabled device, then select this unit from amongst the devices displayed. If a password is requested, enter “0000.”
   - This unit is displayed as “Pioneer VSX-932 XXXXXX.”
   - To connect another BLUETOOTH enabled device, press and hold until “Now Pairing...” is displayed, then perform step 2. This unit can store the data of up to 8 paired devices.
   - The coverage area is 48´/15 m. Note that connection is not always guaranteed with all BLUETOOTH enabled devices.

**Playing Back**
1. Perform the connection procedure on the BLUETOOTH enabled device. The input on this unit automatically switches to “BLUETOOTH”.
2. Play music. Increase the volume of the BLUETOOTH enabled device to an appropriate level.
   - Due to the characteristics of BLUETOOTH wireless technology, the sound produced on this unit may slightly be behind the sound played on the BLUETOOTH enabled device.
Network Functions

Basic Operations
By connecting this unit to the network you can enjoy internet radio services such as TuneIn, streaming from Spotify Connect, and wireless playback using AirPlay® features. Furthermore, you can use the Music Server feature to stream music files stored on PCs or NAS devices that support the home network feature. The basic operations for Network Functions are introduced in the Basic Manual. For more advanced operations, see the Advanced Manual. There may also be additional network functions provided through firmware updates for this unit. Also see the Advanced Manual for information about new features.

- The network needs to be connected to the internet in order to play internet radio services.
- Depending on the internet radio service, the user may need to register from their computer first.
- To enable Spotify Connect, install the Spotify application on your smartphone or tablet and create a Spotify premium account.
- Refer to the following for Spotify settings:
  - www.spotify.com/connect/
- The network servers compatible with the Music Server feature are those PCs with players installed that have the server functionality of Windows Media® Player 11 or 12, or NAS that are compatible with home network functionality. Note that with PCs, only music files registered in the library of Windows Media® Player can be played.
- You may need to make some settings on the PC in advance to use Windows Media® Player 11 or 12 with the Music Server feature.

Perform the following procedure when the unit is on.

1. Switch the input on the TV to that assigned to the unit.
2. Press NET (a) on the remote controller to display a list of Network Functions on the TV.
3. Select the Network Function with the cursors of the remote controller and press ENTER (b) to confirm your selection.

With internet radio services, follow the on-screen instructions, using the cursors to select radio stations and programs, then press ENTER to play. With Spotify or AirPlay, select this unit with your smartphone to play. With Music Server, select the server with the cursors, then select the desired music file and press ENTER to play.

- To return to the previous screen, press (c).
USB Storage Device

Basic Operations

You can play music files stored on a USB storage device.

Perform the following procedure when the unit is on.

1. Switch the input on the TV to that assigned to the unit.
2. Plug your USB storage device with the music files into the USB port either on the front panel or rear panel of this unit.
3. Press USB (b) on the remote controller and select "USB Front" or "USB Rear".
   • If the "USB" indicator flashes on the display, check whether the USB storage device is plugged in properly.
   • Do not unplug the USB storage device while "Connecting···" is appeared on the display. This may cause data corruption or malfunction.
4. Press ENTER on the remote controller in the next screen. The list of folders and music files on the USB storage device are displayed. Select the folder with the cursors and press ENTER to confirm your selection. (a)
5. With the cursors on the remote controller, select the music file, and then press ENTER to start playback.
   • To return to the previous screen, press (c).
   • The USB port of this unit conforms with the USB 2.0 standard. The transfer speed may be insufficient for some content you play, which may cause some interruption in sound.
   • Operation cannot be guaranteed for all USB storage devices.
   • This unit can use USB storage devices that comply with the USB mass storage device class standard. The unit is also compatible with USB storage devices using the FAT16 or FAT32 file system formats.
Listening To the AM/FM Radio

You can receive AM and FM radio stations on this unit with the built-in tuner. Perform the following procedure when the unit is on.

**Tuning into a Radio Station**

**Tuning Automatically**

1. Press TUNER (a) on the remote controller repeatedly to select either "AM" or "FM" on the display.
2. Press MODE (e) on the remote controller or TUNING MODE on the main unit, so that the "TunMode: Auto" is displayed on the display.
3. When you press the cursors (b) on the remote controller, automatic tuning starts, and searching stops when a station is found. When tuned into a radio station, the "TUNED" indicator on the display lights. When tuned into an FM radio station, the "STEREO" indicator lights.

When FM broadcasts reception is poor:
Perform the procedure for "Tuning Manually" in the following section. Note that if you tune manually, the reception for FM broadcasts will be monaural rather than stereo, irrespective of the sensitivity of the reception.

**Tuning Manually**

Note that if you tune manually, the reception for FM broadcasts will be monaural rather than stereo, irrespective of the sensitivity of the reception.

1. Press TUNER (a) on the remote controller repeatedly to select either "AM" or "FM" on the display.
2. Press MODE (e) on the remote controller or TUNING MODE on the main unit, so that the "TunMode: Manual" is displayed on the display.
3. While pressing the cursors (b) on the remote controller, select the desired radio station.

The frequency changes by 1 step each time you press the cursors (b). The frequency changes continuously if the button is held down and stops when the button is released.

**Frequency step setting:**
Press (c) on the remote controller, and from Home menu displayed select "System Setup" - "Miscellaneous" - "Tuner" - "AM / FM Frequency Step" or "AM Frequency Step", and select the frequency step for your region. Note that when this setting is changed, all radio presets are deleted.
Presetting a Radio Station
You can preset up to 40 stations.

Registration Procedure
After tuning into the AM/FM radio station you want to register, perform the following procedure.
1. Press +Fav (d) on the remote controller or +FAVORITE on the main unit so that the preset number on the display flashes.
2. While the preset number is flashing (about 8 seconds), repeatedly press the cursors \( \uparrow / \downarrow (b) \) on the remote controller to select a number between 1 and 40.
3. Press +Fav again on the remote controller or +FAVORITE on the main unit to register the station. When registered, the preset number stops flashing. Repeat this procedure for all of your favorite AM/FM radio stations.

Selecting a Preset Radio Station
1. Press TUNER (a) on the remote controller.
2. Press cursors \( \uparrow / \downarrow (b) \) on the remote controller to select a preset number.

Deleting a Preset Radio Station
1. Press TUNER (a) on the remote controller.
2. Press cursors \( \uparrow / \downarrow (b) \) on the remote controller to select the preset number to delete.
3. After pressing +Fav (d) on the remote controller or +FAVORITE on the main unit, press CLEAR (c) while the preset number is flashing to delete the preset number. When deleted, the number on the display goes off.

Using RDS (European, Australian and Asian models)
RDS stands for Radio Data System and is a method of transmitting data in FM radio signals. In regions using RDS, the radio station name is displayed when you tune into a radio station broadcasting program information. When you press \( \uparrow \) on the remote controller in this state, you can use the following functions.

Display Text Information (Radio Text)
1. While the name of the station is being displayed on the display, press \( \uparrow \) on the remote controller.

Search for Stations by Program Type
1. While the name of the station is being displayed on the display, press \( \uparrow \) on the remote controller.
2. Press \( \uparrow / \downarrow (b) \) on the remote controller to select the Program Type you want to find, then press ENTER to start the search.

- The Program Types displayed are as follows: None / News (News reports) / Affairs (Current affairs) / Info (Information) / Sport / Educate (Education) / Drama / Culture / Science (Science and technology) / Varied / Pop M (Pop music) / Rock M (Rock music) / Easy M (Middle of the road music) / Light M (Light classics) / Classics (Serious classics) / Other M (Other music) / Weather / Finance / Children (Children’s programmes) / Social (Social affairs) / Religion / Phone In / Travel / Leisure / Jazz (Jazz music) / Country (Country music) / Nation M (National music) / Oldies (Oldies music) / Folk M (Folk music) / Document (Documentary)
- The information displayed may sometimes not match the content being broadcast by the station.
- When a station is found, the station flashes on the display. Press ENTER while this is happening to start receiving that station. If you don't press ENTER, the unit continues to search for another station.
- If no stations are found, the message "Not Found" is displayed.
- Unusual characters may be displayed when the unit receives unsupported characters. However, this is not a malfunction. Also, if the signal from a station is weak, information may not be displayed.

Using RDS (European, Australian and Asian models)
RDS stands for Radio Data System and is a method of transmitting data in FM radio signals. In regions using RDS, the radio station name is displayed when you tune into a radio station broadcasting program information. When you press \( \uparrow \) on the remote controller in this state, you can use the following functions.

Display Text Information (Radio Text)
1. While the name of the station is being displayed on the display, press \( \uparrow \) on the remote controller.

Search for Stations by Program Type
1. While the name of the station is being displayed on the display, press \( \uparrow \) on the remote controller.
2. Press \( \uparrow / \downarrow (b) \) on the remote controller to select the Program Type you want to find, then press ENTER to start the search.

- The Program Types displayed are as follows: None / News (News reports) / Affairs (Current affairs) / Info (Information) / Sport / Educate (Education) / Drama / Culture / Science (Science and technology) / Varied / Pop M (Pop music) / Rock M (Rock music) / Easy M (Middle of the road music) / Light M (Light classics) / Classics (Serious classics) / Other M (Other music) / Weather / Finance / Children (Children’s programmes) / Social (Social affairs) / Religion / Phone In / Travel / Leisure / Jazz (Jazz music) / Country (Country music) / Nation M (National music) / Oldies (Oldies music) / Folk M (Folk music) / Document (Documentary)
- The information displayed may sometimes not match the content being broadcast by the station.
- When a station is found, the station flashes on the display. Press ENTER while this is happening to start receiving that station. If you don't press ENTER, the unit continues to search for another station.
- If no stations are found, the message "Not Found" is displayed.
- Unusual characters may be displayed when the unit receives unsupported characters. However, this is not a malfunction. Also, if the signal from a station is weak, information may not be displayed.
This unit is equipped with a variety of listening modes. The basic operations are introduced in the Basic Manual. For more details, see the Advanced Manual.

- The listening mode last selected for the source is remembered for each of the AUTO/DIRECT, SURR, and STEREO buttons. If content you play is not supported by the listening mode you selected last, the listening mode that is standard for that content is selected automatically.

**AUTO/DIRECT button (a)**
Press repeatedly and the listening modes suited to the input signal are switched between "Auto Surround", "Direct", and "Pure Direct". After selecting one of them, "Auto Surround" (or "Direct" or "Pure Direct") is displayed on the display of the main unit, then the listening mode selected automatically (Dolby Digital for multi-channel input signals, Stereo for 2 channel input signals, etc.) is displayed.

The "Direct" mode shuts down some processing that can affect sound quality, such as the tone control features, so you can enjoy even better sound quality. The "Pure Direct" mode shuts down even more processes that affect sound quality, so you get a more faithful reproduction of the original sound. In this case, the speaker calibration made with MCACC is disabled.

- Depending on the input signal and speaker configuration, the Dolby Surround and DTS Neural:X modes that expand 2 channel and 5.1 channel input signals to 5.1 channel and 7.1 channel may be automatically selected.

**SURR button (c)**
You can select a variety of listening modes to suit your taste. There are the Dolby Digital, DTS-HD Master Audio, and Stereo modes that you can choose to suit the input signal, or the Dolby Surround and DTS Neural:X modes that can expand 2 channel and 5.1 channel input signals to 5.1 or 7.1 channels. You can also enjoy original surround modes such as Ext.Stereo and Drama modes.

**STEREO button (d)**
You can select the "Stereo" mode to playback only from the front speakers and subwoofer.

**Checking the Input Format and Listening Mode**
Press \( \) (b) on the remote controller several times to switch the display of the main unit as follows.

<table>
<thead>
<tr>

General Specifications

**Amplifier Section**

Rated Output Power (FTC) (North American)

With 8 ohm loads, both channels driven, from 20-20,000 Hz; rated 80 watts per channel minimum RMS power, with no more than 0.08% total harmonic distortion from 250 milliwatts to rated output.

Surround Mode Output Power (*)

(6 ohms, 1 kHz THD 0.9%) 140 W per channel

* Reference output for each speakers.

Depending on the source and the listening mode settings, there may be no sound output.

Rated Output Power (IEC)

7 ch × 130 W at 6 ohms, 1 kHz, 1 ch driven of 1% THD

Maximum Effective Output Power (JEITA)

7 ch × 165 W at 6 ohms, 1 kHz, 1 ch driven of 10% THD (North American)

7 ch × 160 W at 6 ohms, 1 kHz, 1 ch driven of 10% THD (Asian and Australian)

Dynamic Power (*)

* IEC60268-Short-term maximum output power

160 W (3 Ω, Front)

125 W (4 Ω, Front)

85 W (8 Ω, Front)

THD+N (Total Harmonic Distortion+Noise)

0.08% (20 Hz - 20,000 Hz, half power)

Input Sensitivity and Impedance (1 kHz 100 W/8 Ω)

200 mV/47 kΩ (LINE (Unbalance))

3.5 mV/47 kΩ (PHONO MM)

Rated RCA Output Level and Impedance

1 V/470 Ω (SUBWOOFER PRE OUT)

Phono Overload

70 mV (MM 1 kHz 0.5%)

Frequency Response

10 Hz - 100 kHz/+1 dB, –3 dB (Pure Direct)

Tone Control Characteristics

± 10 dB, 90 Hz (BASS)

± 10 dB, 7.5 kHz (TREBLE)

Signal to Noise Ratio

106 dB (IHFA, LINE IN, SP OUT)

80 dB (IHFA, PHONO IN, SP OUT)

Speaker Impedance

4 Ω - 16 Ω

Headphone Output Impedance

330 Ω

Headphone Rated Output

80 mW (32 Ω, 1 kHz, 10% THD)

**Video Section**

Signal level

1 Vp-p/75 Ω (Composite Video)

**Tuner Section**

FM Tuning Frequency Range

87.5 MHz - 107.9 MHz (North American)

87.5 MHz - 108.0 MHz, RDS (Others)

AM Tuning Frequency Range

530 kHz - 1710 kHz (North American)

522/530 kHz - 1611/1710 kHz (Others)

Preset Channel

40

**Network Section**

Ethernet LAN

10BASE-T/100BASE-TX

Wireless LAN

IEEE 802.11 a/b/g/n standard (Wi-FI® standard)

5 GHz/2.4 GHz band

2.4 GHz band

Modulation method

FHSS (Freq Hopping Spread Spectrum)

Compatible BLUETOOTH profiles

A2DP 1.2

AVRCP 1.3

HOGP-Host (Client)

HOGP-HID Device (Server)

HID Service (HIDS)

Supported Codecs

SBC

AAC

Transmission range (A2DP)

20 Hz - 20 kHz (Sampling frequency 44.1 kHz)

Maximum communication range

Line of sight approx. 15 m (★)

★ The actual range will vary depending on factors such as obstacles between devices, magnetic fields around a microwave oven, static electricity, cordless phone, reception sensitivity, antenna’s performance, operating system, software application, etc.

**General**

Power Supply

AC 120 V, 60 Hz (North American)

AC 220 - 240 V, 50/60 Hz (Others)

Power Consumption

480 W

0.1 W (Stand-by, North American)

0.15 W (Stand-by, Others)

45 W (No-sound)

4.2 W (HDMI Standby Through, North American)

4.5 W (HDMI Standby Through, Others)

2.6 W (Network Standby, North American)

2.8 W (Network Standby, Others)

Dimensions (W × H × D)

435 mm × 173 mm × 320.5 mm

17-1/8" × 6-13/16" × 12-5/8"

Weight

8.8 kg (19.4 lbs.)
**HDMI**

- **Input**
  - IN1 (BD/DVD), IN2 (CBL/SAT), IN3 (STRM BOX), IN4 (GAME)
- **Output**
  - OUT
- **Supported**
  - Deep Color, x.v.Color™, LipSync, Audio Return Channel, 3D, 4K 60 Hz, CEC, Extended Colorimetry (sYCC601, Adobe RGB, Adobe YCC601), Content Type, HDR
- **Audio Format**
  - Dolby Atmos, Dolby TrueHD, Dolby Digital, Dolby Digital Plus, DTS, DTS:X, DTS-HD Master Audio, DTS-HD High Resolution Audio, DTS 96/24, DTS-ES, DTS-HD Express, DSD, PCM
- **Maximum Video Resolution**
  - 4k 60 Hz (YCbCr 4:4:4)

**Video Inputs**

- **Composite**
  - IN1 (BD/DVD), IN2 (CBL/SAT)

**Compatible input resolutions**

- **HDMI input**
  - 4K, 1080p/24, 1080p, 1080i, 720p, 480p/576p
- **Composite input**
  - 480i/576i
  - The output from the HDMI OUT jack to the TV is the same resolution as the input. When using a TV that supports 4K, 1080p HDMI video signals can also be output as 4K.

**Audio Inputs**

- **Digital**
  - OPTICAL (TV)
  - COAXIAL (CD)
- **Analog**
  - BD/DVD, CBL/SAT, PHONO, AUX (front)

**Audio Outputs**

- **Analog**
  - 2 SUBWOOFER PRE OUT
- **Speaker Outputs**
  - FRONT L/R, CENTER, SURROUND L/R, SURROUND BACK / HEIGHT L/R
  - (North American models are banana plug ready)
- **Phones**
  - PHONES (Front, ø 6.3 mm, 1/4”)

**Others**

- **Setup Mic**
  - 1 (Front)
- **USB**
  - 2 (Ver. 2.0, 5 V/500 mA)
- **Ethernet**
  - 1

**Power consumption in standby mode**

- In the following cases, the power consumption in standby mode may reach up to a maximum of 12 W:
  - When “Network Standby” is set to “On”
  - When “HDMI CEC” is set to “On”
  - When “HDMI Standby Through” is set to other than “Off”
  - When “Bluetooth Wakeup” is set to “On”
  - When “USB Power Out at Standby” is set to “On”

Specifications and features are subject to change without notice.
About HDMI

**Compatible functions**

HDMI (High Definition Multimedia Interface) is a digital interface standard for connecting TVs, projectors, Blu-ray Disc/DVD players, set-top boxes, and other video components. Until now, several separate video and audio cables have been required to connect AV components. With HDMI, a single cable can carry control signals, digital video and digital audio (2 ch PCM, multichannel digital audio, and multichannel PCM).

**HDMI CEC functionality:**

By connecting devices and HDMI cables that comply with the CEC (Consumer Electronics Control) specification of the HDMI standard, a variety of linked operation become possible between devices. You can enjoy features such as linking input switching with the input selector and players, control volume using the remote controller of the TV, and automatically switching this unit to standby when the TV is turned off.

The unit is designed to link with products that comply with the CEC standard, and that linked operation is not always guaranteed with all CEC devices. For linked functions to work properly, do not connect more CEC-compliant components than the quantities specified below, to the HDMI jack.

- **Blu-ray Disc/DVD players:** up to 3 units.
- **Blu-ray Disc/DVD recorders:** up to 3 units.
- **Cable TV tuner, terrestrial digital tuner, and satellite broadcasting tuner:** up to 4 units.

Operation has been confirmed on the following devices:

(As of February 2017)

- Toshiba brand televisions;
- Sharp brand televisions;
- Toshiba brand players and recorders;
- Sharp brand players and recorders (when used with a Sharp brand television)

**ARC (Audio Return Channel):**

By connection a TV that supports ARC with a single HDMI cable, you can not only output the audio and video from this unit to the TV, but also input the audio from the TV to this unit.

**HDMI Standby Through:**

Even if this unit is in standby, the input signals from AV components are transmitted to the TV.

**Deep Color:**

By connecting devices supporting Deep Color, video signals input from the devices can be reproduced on the TV with even more colors.

**x.v.Color™:**

This technology realizes even more realistic colors by broadening the color gamut.

**3D:**

You can transmit 3D video signals from AV components to the TV.

**4K:**

This unit supports 4K (3840 × 2160p) and 4K SMPTE (4096 × 2160p) video signals.

**LipSync:**

This setting automatically corrects any desynchronization between the video and audio signals based on data from the HDMI LipSync compatible TV.

**Copyright Protection:**

The unit supports Revision 1.4 and Revision 2.2 of the HDCP (High-bandwidth Digital Content Protection), a copy-protection system for digital video signals. Other devices connected to the unit must also support HDCP.

**Supported Audio Formats**

- **2 ch linear PCM:**
  - 32 kHz, 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz, 16/20/24 bit
- **Multi-channel linear PCM:**
  - Maximum 7.1 channels, 32 kHz, 44.1 kHz, 48 kHz,

**Bitsream:**

Dolby Atmos, Dolby Digital, Dolby Digital Plus, Dolby TrueHD, DTS, DTS:X, DTS-HD High Resolution Audio, DTS-HD Master Audio

**DSD:**

Supported sampling rates: 2.8 MHz

Your Blu-ray Disc/DVD player must also support HDMI output of the above audio formats.

**Supported resolutions**

- **Color space (Color Depth):**
  - 720p 60Hz, 720p 50Hz, 720p 576i 50Hz, 720p 576i 60Hz, 1080p 50/60Hz, 1080i 50/60Hz, 1200p 50/60Hz, 1920p 50/60Hz, 2160p 50/60Hz, 4K (3840 × 2160p) 50/60Hz, 4K SMPTE (4096 × 2160p) 50/60Hz:
    - RGB/YCbCr4:4:4 (8/10/12 bit), YCbCr4:2:2 (12 bit), YCbCr4:2:0 (12 bit)
- **Deep Color: X.v.Color™:**
  - 3840 × 2160p 50/60Hz, 4K SMPTE (4096 × 2160p) 50/60Hz:
    - RGB/YCbCr4:4:4 (8/10/12 bit), YCbCr4:2:2 (12 bit), YCbCr4:2:0 (8/10/12 bit)
USB Storage Device Requirements

- This unit can use USB storage devices that comply with the USB mass storage device class standard.
- FAT16 or FAT32 file system format.
- If the USB storage device has been partitioned, each section will be treated as an independent device.
- Up to 20,000 tracks per folder can be displayed, and folders may be nested up to 16 levels deep.
- USB hubs and USB storage devices with hub functions are not supported. Do not connect these devices to the unit.
- USB storage devices with security function are not supported on this unit.
- If you connect a USB hard disk drive to the USB port of the unit, we recommend that you use its AC adapter to power it.
- Media inserted to the USB card reader may not be available in this function. Furthermore, depending on the USB storage device, proper reading of the contents may not be possible.
- Our company accepts no responsibility whatsoever for the loss or damage to data stored on a USB storage device when that device is used with this unit. We recommend that you back up your important music files beforehand.

Supported Audio Formats

This unit supports the following music file formats. Note that sound files that are protected by copyright cannot be played on this unit.

MP3 (.mp3/.MP3):
- Supported formats: MPEG-1/MPEG-2 Audio Layer 3
- Supported sampling rates: 44.1 kHz, 48 kHz
- Supported bitrates: Between 8 kbps and 320 kbps.

WMA (.wma/.WMA):
- Supported sampling rates: 44.1 kHz, 48 kHz
- Supported bitrates: Between 5 kbps and 320 kbps.
- WMA Pro/Voice/WMA Lossless formats are not supported

WAV (.wav/.WAV):
WAV files include uncompressed PCM digital audio.
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

AIFF (.aiff/.AIFF/.AIF/)
AIFF files include uncompressed PCM digital audio.
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

- Supported formats: MPEG-2/MPEG-4 Audio
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz
- Supported bitrates: Between 8 kbps and 320 kbps.

FLAC (.flac/.FLAC)
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

Apple Lossless (.m4a/.mp4/.M4A/.MP4)
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Quantization bit: 8 bit, 16 bit, 24 bit

DSD (.dsf/.dff/.DSF/.DFF)
- Supported formats: DSF/DSDIFF
- Supported sampling rates: 2.8 MHz, 5.6 MHz

Dolby TrueHD (.vr/.mlp/.VR/.MLP)
- Supported sampling rates: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- Variable bit-rate (VBR) files are supported. However, playback times may not be displayed correctly.

This unit supports the gapless playback of the USB storage device in the following conditions. When playing WAV, FLAC and Apple Lossless, and the same format, sampling frequency, channels and quantization bit rate are played continuously.
## Supported Audio Formats

This unit supports the following music file formats. Remote play of FLAC and DSD is not supported.

### MP3 (.mp3/.MP3):
- **Supported formats:** MPEG-1/MPEG-2 Audio Layer 3
- **Supported sampling rates:** 44.1 kHz, 48 kHz
- **Supported bitrates:** Between 8 kbps and 320 kbps.

### WMA (.wma/.WMA):
- **Supported sampling rates:** 44.1 kHz, 48 kHz
- **Supported bitrates:** Between 5 kbps and 320 kbps.
- **WMA Pro/Voice/WMA Lossless formats are not supported**

### WAV (.wav/.WAV):
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

### AIFF (.aiff/.aif/.AIFF/.AIF):
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

- **Supported formats:** MPEG-2/MPEG-4 Audio
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz
- **Supported bitrates:** Between 8 kbps and 320 kbps.

### FLAC (.flac/.FLAC):
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

### LPCM (Linear PCM):
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz, 176.4 kHz, 192 kHz
- **Quantization bit:** 8 bit, 16 bit, 24 bit

### Apple Lossless (.m4a/.mp4/.M4A/.MP4):
- **Supported sampling rates:** 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz
- **Quantization bit:** 16 bit, 24 bit

### DSD (.dsf/.dff/.DSF/.DFF):
- **Supported formats:** DSF/DSDIFF
- **Supported sampling rates:** 2.8 MHz, 5.6 MHz
- **Variable bit-rate (VBR) files are supported. However, playback times may not be displayed correctly.**
- **Remote playback does not support the gapless playback.**
System Setup

The unit allows you to configure advanced settings to provide you with an even better experience.

**Operation:**
Use the on-screen displays (OSD) that appear on the TV to make the settings. Press 🔄 on the remote controller to display the Home screen, then select System Setup with the cursors on the remote controller and press ENTER.

Select the item with the cursor ▲/▼/◄/► buttons of the remote controller and press ENTER to confirm your selection.

- To return to the previous screen, press ►.
- To exit the settings, press 🔄.

---

### Input/Output Assign

Make settings related to output to the TV, change the settings for jack allocations to the various input selectors, and set the feature for displaying operations on the TV (OSD), etc.

#### TV Out / OSD

If an item cannot be selected even though connection is correct, check that the settings in &quot;Configuration&quot; - &quot;Speaker Channels&quot; matches the number of connected channels.</td>
</tr>
</tbody>
</table>
### Setting Item Default Value Setting Details

#### Height
- **Small**
  - Set the low range capabilities for each channel by setting either small or large.
  - "Small": For small speakers whose low range capabilities may be limited
  - "Large": For full-range speakers with sufficient low range capabilities
  - When "Front" is set to "Small", this is set to "Small".
  - If an item cannot be selected even though connection is correct, check that the settings in "Configuration" - "Speaker Channels" matches the number of connected channels.

#### Surround
- **Small**
  - Set the low range capabilities for each channel by setting either small or large.
  - "Small": For small speakers whose low range capabilities may be limited
  - "Large": For full-range speakers with sufficient low range capabilities
  - When "Front" is set to "Small", this is set to "Small".
  - If an item cannot be selected even though connection is correct, check that the settings in "Configuration" - "Speaker Channels" matches the number of connected channels.

#### Surround Back
- **Small**
  - Set the low range capabilities for each channel by setting either small or large.
  - "Small": For small speakers whose low range capabilities may be limited
  - "Large": For full-range speakers with sufficient low range capabilities
  - When "Surround" is set to "Small", this is set to "Small".
  - If an item cannot be selected even though connection is correct, check that the settings in "Configuration" - "Speaker Channels" matches the number of connected channels.

#### Setting Item Default Value Setting Details

</thead>
<tbody>
<tr>
<td>Loudness Management</td>
<td>On</td>
<td>When playing Dolby TrueHD, enable the dialog normalization function which keeps the volume of dialog at a certain level. Note that when this setting is Off, the DRC function that allows you to enjoy surround at low volumes is fixed to off when playing Dolby Digital Plus/Dolby TrueHD. &quot;On&quot;: When this function is to be used &quot;Off&quot;: When this function is not to be used</td>
</tr>
</tbody>
</table>
### Volume

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mute Level</td>
<td>$-\infty$ dB</td>
<td>Set the volume lowered from the listening volume when muting is on. Select a value from &quot;$-\infty$ dB&quot;, &quot;$-40$ dB&quot;, and &quot;$-20$ dB&quot;.</td>
</tr>
<tr>
<td>Volume Limit</td>
<td>Off</td>
<td>Set the maximum value to avoid too high volume. Select a value from &quot;Off&quot;, &quot;$-32$ dB&quot; to &quot;$+17$ dB&quot;.</td>
</tr>
<tr>
<td>Power On Level</td>
<td>Last</td>
<td>Set the volume level when the power is turned on. Select a value from &quot;Last&quot; (Volume level before entering standby mode), &quot;$-\infty$ dB&quot;, and &quot;$-81.5$ dB&quot; to &quot;$+18.0$ dB&quot;. You cannot set a higher value than that of &quot;Volume Limit&quot;.</td>
</tr>
<tr>
<td>Headphone Level</td>
<td>$0.0$ dB</td>
<td>Adjust the output level of the headphones. Select a value between &quot;$-12.0$ dB&quot; and &quot;$+12.0$ dB&quot;.</td>
</tr>
</tbody>
</table>

### Source

Make settings for input sources, such as volume difference adjustments for each input selector for the connected equipment.

### Input Volume Absorber

Adjust the volume level difference between the devices connected to the unit. Select the input selector to configure.

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input Volume Absorber</td>
<td>$0.0$ dB</td>
<td>Select a value between &quot;$-12.0$ dB&quot; and &quot;$+12.0$ dB&quot;. Set a negative value if the volume of the target device is larger than the others and a positive value if smaller. To check the audio, start playback of the connected device.</td>
</tr>
</tbody>
</table>

### Name Edit

Set an easy name to each input. The set name will be shown on the main unit display. Select the input selector to configure.

1. Select a character or symbol with the cursors and press ENTER. Repeat it to input 10 or less characters. "A/a": Switches between upper and lower cases. (Pressing MODE on the remote controller also toggles between upper and lower cases) "←" "→": Moves the cursor to the arrow direction. "\[\]": Removes a character on the left of the cursor. "\[\]: Enters a space. Pressing CLEAR on the remote controller will remove all the input characters.
2. After inputting, select "OK" with the cursors and press ENTER. The input name will be saved.
To name a preset radio station, press TUNER on the remote controller, select AM/FM and select the preset number.

This cannot be set if the "NET" "USB" or "BLUETOOTH" input is selected.

### Audio Select

Select the priority for input selection when multiple audio sources are connected to one input selector, such as connections to both the "BD/DVD" HDMI IN jack and the "BD/DVD" AUDIO IN jack. The setting can be separately set to each input selector. Select the input selector to configure. Note that there are some default values you cannot change.

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Audio Select</td>
<td></td>
<td></td>
</tr>
<tr>
<td>BD/DVD:</td>
<td>HDMI</td>
<td>&quot;ARC&quot;: When giving priority to input signal from ARC compatible TV. The setting can be selected only when &quot;Hardware&quot; - &quot;HDMI&quot; - &quot;Audio Return Channel&quot; is set to &quot;Auto&quot; and also the &quot;TV&quot; input is selected.</td>
</tr>
<tr>
<td>CBL/SAT:</td>
<td>HDMI</td>
<td>&quot;HDMI&quot;: When giving priority to input signal from HDMI IN jacks The setting can be selected only when the input is assigned to the HDMI jack in the &quot;Input/Output Assign&quot; - &quot;HDMI Input&quot; setting.</td>
</tr>
<tr>
<td>GAME:</td>
<td>HDMI</td>
<td>&quot;COAXIAL&quot;: When giving priority to input signal from DIGITAL IN COAXIAL jacks The setting can be selected only when the input is assigned to the COAXIAL jack in the &quot;Input/Output Assign&quot; - &quot;Digital Audio Input&quot; setting.</td>
</tr>
<tr>
<td>STRM BOX:</td>
<td>HDMI</td>
<td>&quot;OPTICAL&quot;: When giving priority to input signal from DIGITAL IN OPTICAL jacks The setting can be selected only when the input is assigned to the OPTICAL jack in the &quot;Input/Output Assign&quot; - &quot;Digital Audio Input&quot; setting.</td>
</tr>
<tr>
<td>CD:</td>
<td>COAXIAL</td>
<td>&quot;Analog&quot;: To always output analog audio independently of the input signal The setting can be selected only when the input is assigned to the AUDIO IN jack in the &quot;Input/Output Assign&quot; - &quot;Analog Audio Input&quot; setting.</td>
</tr>
<tr>
<td>TV:</td>
<td>OPTICAL</td>
<td></td>
</tr>
<tr>
<td>PHONO:</td>
<td>Analog</td>
<td></td>
</tr>
</tbody>
</table>

Select whether to fix input signals to PCM (except multi-channel PCM) when you have selected "HDMI", "COAXIAL", or "OPTICAL" in the "Audio Select" setting. Set this item to "On" if noise is produced or truncation occurs at the beginning of a track when playing PCM sources. Select "Off" normally.

Changing "Audio Select" changes the setting to "Off".

The setting cannot be changed when "TUNER", "NET", "USB", or "BLUETOOTH" input is selected.
Hardware

Make settings related to the HDMI CEC, HDMI Standby Through, ARC features, settings related to power management of the unit, such as Auto Standby and Network Standby.

**HDMI**

<table>
<thead>
<tr>
<th>Setting Item</th>
<th>Default Value</th>
<th>Setting Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI CEC</td>
<td>Off</td>
<td>Setting to &quot;On&quot; enables the input selection link and other link functions with HDMI connected CEC compliant device. &quot;On&quot;: When this function is to be used &quot;Off&quot;: When this function is not to be used When changing this setting, turn off and then on again the power of all connected components. • Depending on the TV set, a link may need to be configured on the TV. • Setting to &quot;On&quot; and closing the on-screen menu displays the name of the CEC-compatible components and &quot;CEC On&quot; on the display. • Power consumption in standby mode may increase if &quot;On&quot; is set. (Depending on the TV status, the unit will enter the normal standby mode.) • If you operate the MASTER VOLUME dial on the main unit when this setting is &quot;On&quot; and audio is output from the TV speakers, audio will be output also from the speakers connected to the unit. If you want to output from only either of them, change the unit or TV settings, or reduce the volume of the unit. • If abnormal operation occurs when you set the setting to &quot;On&quot;, set it to &quot;Off&quot;. • When connecting a non-CEC compatible component, or when you are not sure whether it is compatible, set the setting to &quot;Off&quot;.</td>
</tr>
<tr>
<td>HDMI Standby Through</td>
<td>Off</td>
<td>When this is set to anything other than &quot;Off&quot;, you can play the video and audio of an HDMI connected player on the TV even if the unit is in standby mode. Only &quot;Auto&quot; and &quot;Auto (Eco)&quot; can be selected if &quot;HDMI CEC&quot; is set to &quot;On&quot;. If you select anything else, set &quot;HDMI CEC&quot; to &quot;Off&quot;. • Power consumption in standby mode increases if set to anything other than &quot;Off&quot;. &quot;BD/DVD&quot;, &quot;CBL/SAT&quot;, &quot;GAME&quot;, &quot;STRM BOX&quot;: For example, if you select &quot;BD/DVD&quot;, you can play the equipment connected to the &quot;BD/DVD&quot; jack on the TV even if the unit is in standby mode. Select this setting if you have decided which player to use with this function. &quot;Last&quot;: You can play the video and audio of the input selected immediately prior to the unit being switched to standby on the TV. &quot;Auto&quot;, &quot;Auto (Eco)&quot;: Select one of these settings when you have connected equipment that conforms to the CEC standard. You can play the video and audio of the input selected on the TV, irrespective of what input was selected immediately prior to the unit being switched to standby, using the CEC link function. • To play players on the TV that do not conform to the CEC standard, you will need to turn the unit on and switch to the relevant input. • When using TV that complies with the CEC standard, you can reduce the power consumption in standby mode by selecting &quot;Auto (Eco)&quot;.</td>
</tr>
</tbody>

</tbody>
</table>
MCACC

Setup the speakers automatically or make desired changes to the equalizer. You can also check the values set currently for each speaker setting.

**Operation:**
Use the on-screen displays (OSD) that appear on the TV to make the settings.
Press  
 on the remote controller to display the Home screen, then select MCACC with the cursors on the remote controller and press ENTER.

Select the item with the cursor  
 buttons of the remote controller and press ENTER to confirm your selection.
Use the cursors  
 to change the default values.
- To return to the previous screen, press  
.
- To exit the settings, press  
.

**Full Auto MCACC**
Place the supplied speaker setup microphone in the listening position, measure the test tones emitted by the speakers, then the unit automatically sets the optimum volume level for each speaker, the crossover frequencies, and the distance from the listening position. This also automatically adjusts the equalizers for the speakers and enables correction of distortion caused by the acoustic environment of the room.

- Calibration takes between 3 and 12 minutes to be completed. The speakers emit the test tone at high volume during measurement, so be careful of your surroundings. Keep the room as quiet as possible during measurement.
- If you have connected a subwoofer, check the power and volume of the subwoofer. Set the subwoofer volume to more than halfway.
- If the power of this unit suddenly turns off, the wires in the speaker cables may have touch the rear panel or other wires and tripped the protection circuit. Twist the wires again properly and make sure they do not stick out of the speaker terminals when connecting.

1. Place the supplied speaker setup microphone in the listening position, and connect to the MCACC SETUP MIC jack on the main unit.

When putting the speaker setup microphone on a tripod, refer to the illustration when putting it in place.

2. Select the connected speaker configuration.
The image on the screen changes as you choose the number of channels in "Speaker Channels", so refer to it when performing the settings.

3. Test tones are emitted by the speakers, and firstly the unit detects the speakers connected and the noise in the environment.

4. After the results of the measurements are displayed, select "Next", press ENTER on the remote controller, and the test tones are emitted again, and the unit automatically makes settings such as the optimum volume level and the crossover frequency.

5. When the measurement is completed, the measurement result is displayed. Press the cursors on the remote controller to check the settings. Press ENTER when "Save" is selected to save the settings.

6. Disconnect the speaker setup microphone.

---

**EQ Adjust**

If you perform Full Auto MCACC then settings are automatic, but you can also adjust the output volume of the range of each connected speaker to suit your own preferences. You can adjust the volume of the different sound ranges for each of the speakers. You can set three different equalizers in Preset 1 to 3. You can select up to 4 bands for the Subwoofer and 9 bands for all other speakers.

• Wait for a while if "Bluetooth" cannot be selected. It will appear when the BLUETOOTH function is started up.
**AV Adjust**

You can quickly adjust settings you frequently use, such as tone adjustments, etc.

**Operation:**
You can make the settings on the TV screen while playing something. Press the up/ down buttons on the remote controller to display the AV Adjust menu. Note that there is no display on the TV screen when the input selector is "CD", "TV", "PHONO", "FM", or "AM", so follow the main unit’s display while doing the operations.

Select the item with the cursor up/down buttons of the remote controller and press ENTER to confirm your selection. Use the cursors to change the settings.
- To return to the previous screen, press.
- To exit the settings, press.

### Tone

**Bass:**
Enhance or moderate the bass range of the speaker.

**Treble:**
Enhance or moderate the treble range of the speaker.

- It cannot be set if the listening mode is Direct or Pure Direct.

### Level

**Center:**
Adjust the speaker level of the center speaker while listening to some sound.

- The adjustment you made will be reset to the previous status when you turn the unit to standby mode.

**Subwoofer:**
Adjust the speaker level of the subwoofer while listening to some sound.

### MCACC

**MCACC EQ:**
Enable or disable the equalizer function that corrects for distortion caused by the acoustic environment of the room.

- It cannot be set if the listening mode is Pure Direct.

**Manual EQ Select:**
From the Home screen, select "Preset 1" to "Preset 3" which were set in "MCACC" - "Manual MCACC" - "EQ Adjust". The same sound field setting is applied all ranges when set to "Off".

- It cannot be set if the listening mode is Pure Direct.

**Phase Control:**
Correct phase disturbance in the low range to enhance the bass. This enables you to achieve powerful bass reproduction that is faithful to the original sound.

- It cannot be set if the listening mode is Pure Direct.

**Theater Filter:**
Adjust the soundtrack that was processed to enhance its high pitch range, in order to make it suitable for home theater.

- It cannot be set if the listening mode is Direct or Pure Direct.

### Other

**Sound Delay:**
If the video is behind the audio, you can delay the audio to offset the gap. Different settings can be set for each input selector.

- It cannot be set if the listening mode is Pure Direct and the input signal is analog.

**Sound Retriever:**
Improve the quality of the compressed audio. Playback sound of lossy compressed files such as MP3 will be improved. The setting can be separately set for each input selector. The setting is effective in the signals of 48 kHz or less. The setting is not effective in the bitstream signals.

- It cannot be set if the listening mode is Direct or Pure Direct.

**DRC:**
Make small sounds easily heard. It is useful when you need to reduce the volume while watching a movie late night. You can enjoy the effect only when playing Dolby series and DTS series input signals.

- It cannot be set if the listening mode is Direct or Pure Direct.

- The setting cannot be used in the following cases.
  - If "Loudness Management" is set to "Off" when playing Dolby Digital Plus or Dolby TrueHD
  - When the input signal is DTS:X and "Dialog Control" is other than 0 dB

**Center Spread:**
Adjust the width of the sound field of the front channel when playing in the Dolby Surround listening mode. To spread the width of the sound field to the left and right, set to "On". To concentrate sound in the center, set to "Off".

- Depending on the speaker settings, this becomes "Off".

**Dialog Control:**

You can increase the dialog portion of the audio in 1 dB steps up to 6 dB so that you can make dialog easier to hear over background noise.

- This cannot be set for content other than DTS:X.
- The effect may not be selectable with some content.
Web Setup

You can make the settings for network features for this unit in an internet browser on a PC, smartphone, etc.

1. Press ™ on the remote controller to display the Home screen.
2. Select "Network/Bluetooth" - "Network" with the cursors, then take a note of the IP address displayed in "IP Address".
3. Start the internet browser on your PC or smartphone and enter the IP address of the unit in the URL field.
4. Information for the unit (Web Setup screen) is displayed in the internet browser.

5. After changing the settings, select "Save" to save the settings.

Device Information
You can change the Friendly Name, set an AirPlay Password, etc.

Control4: Register this unit if you are using a Control4 system.

Firmware Update: Select the firmware update you have downloaded to your PC so you can update this unit.

Network Setting

Status: You can see information for the network such as the MAC address and IP address for this unit.

Network Connection: You can select how to connect to the network. If you select "Wireless", select an access point from "Wi-Fi Setup" to connect.

Proxy: Display and set the URL for the proxy server.
Firmware Update

The updating function on this unit

This unit has functionality to update the firmware (the system software) over a network or by the USB port. This enables us to make improvements to a variety of operations and to add features.

- For the latest information on updates, visit our company’s website. There is no need to update the firmware on this unit if there is no update available.
- Before updating, make sure that the speaker setup microphone is not connected.
- During an update, do not:
  - Disconnect and reconnect any cable, USB storage device, speaker setup microphone or headphones, or perform any operation on the component such as turn off its power
  - Accessing this unit from a PC or smartphone using an application
- The update may take about 20 minutes to complete for either method: via network or via USB. Furthermore, existing settings are guaranteed regardless of the method used for update.

Note that when this unit is connected to a network, you may see notifications about firmware updates on the display. To execute updating, select "Update Now" with the cursor buttons of the remote controller and press ENTER. The unit automatically turns itself into standby mode after "Completed!" appears on the display, and updating will be complete.

Disclaimer: The program and accompanying online documentation are furnished to you for use at your own risk. Our company will not be liable and you will have no remedy for damages for any claim of any kind whatsoever concerning your use of the program or the accompanying online documentation, regardless of legal theory, and whether arising in tort or contract. In no event will our company be liable to you or any third party for any special, indirect, incidental, or consequential damages of any kind, including, but not limited to, compensation, reimbursement or damages on account of the loss of present or prospective profits, loss of data, or for any other reason whatsoever.

Updating the Firmware via Network

Preparation:
- Check that the unit is turned on, and the connection to the Internet is secured.
- Turn off the controller component (PC etc.) connected to the network.
- Stop any playing Internet radio, USB storage device, or server content.
- If "HDMI CEC" is set to "On", set it to "Off".
  - Press \( \text{Home} \) on the remote controller to display the Home screen. Next, select "System Setup" - "Hardware" - "HDMI", press ENTER, select "HDMI CEC" and select "Off".*
  * The description may differ from the on-screen display but that will not change the way to operate or the function.

Update

1. Press \( \text{Home} \) on the remote controller.
The Home screen is displayed on the TV screen.

2. Select "System Setup" - "Miscellaneous" - "Firmware Update" - "Update via NET" with the cursors in order, then press ENTER.
If "Firmware Update" is grayed out and cannot be selected, wait for a while until it starts up.

You will not be able to select "Update via NET" if there is nothing to update.

3. Press ENTER with "Update" selected to start update.
   - During the update, the TV screen may go black depending on the updated program. In that case, check the progress on the display of the unit. The TV screen will remain black until the update is complete and the power is turned on again.
   - "Completed!" is displayed when the update is complete.

4. Press STANDBY/ON on the main unit to turn the unit into standby mode. The process is completed and your firmware is updated to the latest version.
   - Do not use on the remote controller.

### Error Code
- **-01, -10:** Ethernet cable not found. Connect the Ethernet cable properly.
- **-02, -03, -04, -05, -06, -11, -13, -14, -16, -17, -18, -20, -21:** Internet connection error. Check the following:
  - The router is turned on
  - This unit and the router are connected via the network
  Try to disconnect and then connect again the power to the unit and router. This may solve the problem. If you are still unable to connect to the Internet, the DNS server or proxy server may be temporarily down. Check the service status with your ISP provider.
- **Others:** Disconnect then reconnect the AC power cord, then repeat from the beginning.

### Updating via USB

**Preparation:**
- Prepare a 128MB or larger USB storage device. FAT16 or FAT32 file system format.
  - Media inserted in a USB card reader may not be used for this function.
  - USB storage devices with security function are not supported.
  - USB hubs and USB devices with hub function are not supported. Do not connect these devices to the unit.
- Delete any data stored on the USB storage device.
- Turn off the controller component (PC etc.) connected to the network.
- Stop any playing Internet radio, USB storage device, or server content.
- If "HDMI CEC" is set to "On", set it to "Off".
  - Press on the remote controller to display the Home screen. Next, select "System Setup" - "Hardware" - "HDMI", press ENTER, select "HDMI CEC" and select "Off".
  - Some USB storage devices may take long to load, may not be loaded correctly, or may not be correctly fed depending on the device or their content.
  - Our company will not be liable whatsoever for any loss or damage of data, or storage failure arising from the use of the USB storage device with this unit. Thank you for your understanding.
  - The description may differ from the on-screen display but that will not change the way to operate or the function.

**Update**
1. Connect the USB storage device to your PC.
2. Download the firmware file from our company’s website to your PC and unzip.
   - Firmware files are named in the following way:
     PIOAVR*.*.*.*.*.*.*.*.*.*.*.*.*.*.zip
   - Unzip the file on your PC. The number of unzipped files and folders varies depending on the model.
3. Copy all unzipped files and folders to the root folder of the USB storage device.
   - Make sure to copy the unzipped files.
4. Connect the USB storage device to the USB port of the unit.
   • If you connect a USB hard disk drive to the USB port of the unit, we recommend that you use its AC adapter to power it.
   • If the USB storage device has been partitioned, each section will be treated as an independent device.

5. Press \( \text{Home} \) on the remote controller.
The Home screen is displayed on the TV screen.

6. Select "System Setup" - "Miscellaneous" - "Firmware Update" - "Update via USB" with the cursors in order, then press ENTER.

   • If "Firmware Update" is grayed out and cannot be selected, wait for a while until it starts up.
   • You will not be able to select "Update via USB" if there is nothing to update.

7. Press ENTER with "Update" selected to start update.
   • During the update, the TV screen may go black depending on the updated program. In that case, check the progress on the display of the unit. The TV screen will remain black until the update is complete and the power is turned on again.
   • During the update, do not turn off, or disconnect then reconnect the USB storage device.
   • "Completed!" is displayed when the update is complete.

8. Disconnect the USB storage device from the unit.

9. Press \( \text{STANDBY/ON} \) on the main unit to turn the unit into standby mode. The process is completed and your firmware is updated to the latest version.
   • Do not use \( \text{STANDBY/ON} \) on the remote controller.

### If an Error Message is Displayed

When an error occurs, "*- *:* Error!*" is displayed on the display of the unit. ("*" represents an alphanumeric character.) Check the following:

**Error Code**

- ***-01, *-10:**
  USB storage device not found. Check whether the USB storage device or USB cable is correctly inserted to the USB port of the unit.
  Connect the USB storage device to an external power source if it has its own power supply.

- ***-05, *-13, *-20, *-21:**
  The firmware file is not present in the root folder of the USB storage device, or the firmware file is for another model. Retry from the download of the firmware file.

- **Others:**
  Disconnect then reconnect the AC power cord, then repeat from the beginning.
Selecting Listening Modes

You can change the listening mode during play by pressing repeatedly "AUTO/DIRECT", "SURR", or "STEREO".

- **AUTO/DIRECT button**
  Press repeatedly and the listening modes suited to the input signal are switched between "Auto Surround", "Direct", and "Pure Direct". After selecting one of them, "Auto Surround" (or "Direct" or "Pure Direct") is displayed, then the most suitable listening mode for the audio format is selected automatically (Dolby Digital for multi-channel input signals, Stereo for 2 channel input signals, etc.) and an indicator such as "Dolby D" is displayed on the display.

  - AutoSurround
  - Direct
  - Pure Direct
  - Dolby D

  The display changes automatically.

- **SURR button**
  By pressing repeatedly you can select the audio format of the signals being input and switch between a variety of listening modes. Select the mode that suits your preference. The selected listening mode is displayed on the display.

  - Dolby D
  - Dolby Surr
  - Drama

- **STEREO button**
  You can select the "Stereo" mode to playback only from the front speakers and subwoofer.

  For details on the effects of each of the listening modes see "Listening Mode Effects". For listening modes selectable for each of the audio formats in the input signals, refer to "Selectable Listening Modes".

The "Direct" mode shuts down some processing that can affect sound quality, such as the tone control features, so you can enjoy even better sound quality. The "Pure Direct" mode shuts down even more processes that affects sound quality, so you get a more faithful reproduction of the original sound. In this case, the speaker calibration made with MCACC is invalid.
Listening Mode Effects

In alphabetical order

**Action**
Mode suitable for movies with a lot of action scenes.

**AdvancedGame**
Mode suitable for game content.

**Classical**
Suitable for classical or operatic music. This mode emphasizes the surround channels in order to widen the sound image, and simulates the natural reverberation of a large hall.

**Dolby Atmos**
This mode faithfully reproduces the sound design recorded in the Dolby Atmos audio format. The Dolby Atmos audio format has been implemented in movie theaters equipped with the latest facilities and enables a revolutionary sound experience in home theaters. Unlike existing surround systems, Dolby Atmos doesn't rely on channels, but rather enables the accurate placement of sound objects that have independent motion in a three-dimensional space with even greater clarity. Dolby Atmos is an optional audio format on Blu-ray Discs and achieves a three-dimensional sound field by introducing a sound field above the listener.
- To enable transfer of this audio format, connect via digital cable and set audio output on the player to bitstream output.

**Dolby D+ (Dolby Digital Plus)**
This mode faithfully reproduces the sound design recorded in the Dolby Digital Plus audio format. The Dolby Digital Plus format is a revision based on Dolby Digital, increasing the number of channels and endeavoring to improve sound quality by giving more flexibility in data bit rates. Dolby Digital Plus is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with additional channels such as the Surround Back channel added for a maximum of 7.1ch.
- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**Dolby Surround**
This listening mode allows you to expand the playback signal to 5.1 channels or 7.1 channels to suit the connected speaker configuration when the input signal is 2 channels or 5.1 channels. Along with past speaker setups, this is also compatible with playback systems for Dolby Atmos that include Dolby speaker technology.

**Dolby TrueHD**
This mode faithfully reproduces the sound design recorded in the Dolby TrueHD audio format. The Dolby TrueHD audio format is a reversible format expanded based on the lossless compression technology referred to as MLP, and it makes it possible to faithfully reproduce the master audio recorded in the studio. Dolby TrueHD is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with additional channels such as the Surround Back channel added for a maximum of 7.1ch. 7.1ch is recorded at 96kHz/24bit, and 5.1ch is recorded at 192kHz/24bit.
- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**Drama**
Suitable for TV shows produced in a TV studio. This mode enhances the surround effects to the entire sound to give clarity to voices and create a realistic acoustic image.

**DSD**
Mode suitable for playing sources recorded in DSD.
- This unit supports DSD signals input through HDMI IN. However, depending on the connected player, better sound is possible when output from the PCM output of the player.
- This listening mode cannot be selected if the output setting on your Blu-ray Disc/DVD player is not set to DSD.

**DTS**
This mode faithfully reproduces the sound design recorded in the DTS audio format. The DTS audio format is a multi-channel digital format developed by DTS, Inc. This format is an optional audio format on DVD-Video and a standard on Blu-ray Discs. It enables recording of 5.1 channels; two front channels, a center channel, two surround channels, and the LFE channel dedicated to the bass region (sound elements for the subwoofer). The content is recorded with a rich volume of data, with maximum sampling rate of 48 kHz at a resolution of 24 bits and a bit rate of 1.5 Mbps.
- To enable transfer of this audio format, connect via digital cable and set audio output on the player to bitstream output.

**DTS 96/24**
This mode faithfully reproduces the sound design recorded in the DTS 96/24 audio format.
The DTS 96/24 format is an optional audio format on DVD-Video and Blu-ray Discs. It enables recording of 5.1 channels; two front channels, a center channel, two surround channels, and the LFE channel dedicated to the bass region (sound elements for the subwoofer). Detailed reproduction is achieved by recording the content at a sampling rate of 96 kHz at a resolution of 24 bits.

- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**DTS Neural:X**

This listening mode allows you to expand the playback signal to 5.1 channels or 7.1 channels to suit the connected speaker configuration when the input signal is 2 channels or 5.1 channels.

**DTS:X**

This mode faithfully reproduces the sound design recorded in the DTS:X audio format. The DTS:X audio format is a combination of the mixing methodology based on past channel based formats (5.1ch and 7.1ch) and object based dynamic audio mixing, and it is characterized by the precise positioning of sounds and the ability to express movement.

- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**DTS Express**

This mode faithfully reproduces the sound design recorded in the DTS Express audio format. DTS Express is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with channels such as the surround back channel added for a maximum of 7.1ch. It also supports low bit rates.

- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**DTS-HD HR (DTS-HD High Resolution Audio)**

This mode faithfully reproduces the sound design recorded in the DTS-HD High Resolution Audio audio format. DTS-HD High Resolution Audio is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with additional channels such as the Surround Back channel added for a maximum of 7.1ch. It can be recorded at a sampling rate of 96 kHz with a resolution of 24 bits.

- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**DTS-HD MSTR (DTS-HD Master Audio)**

This mode faithfully reproduces the sound design recorded in the DTS-HD Master Audio audio format. DTS-HD Master Audio is used as an optional audio format on Blu-ray Discs, based on 5.1ch, but with additional channels such as the Surround Back channel added for a maximum of 7.1ch, recorded using lossless audio reproduction technology. 96kHz/24bit is supported with 7.1ch, and 192kHz/24bit is supported with 5.1ch.

- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**ES Discrete (DTS-ES Discrete)**

This mode faithfully reproduces the sound design recorded in the DTS-ES Discrete audio format. DTS-ES Discrete is used as an optional audio format on DVD-Video and Blu-ray Discs, based on 5.1ch, but with an additional monaural surround back channel added for a maximum of 6.1ch.

- To enable transfer of this audio format, connect via HDMI cable and set audio output on the player to bitstream output.

**ES Matrix (DTS-ES Matrix)**

This mode faithfully reproduces the sound design recorded in the DTS-ES Matrix audio format. DTS-ES Matrix is used as an optional audio format on DVD-Video and Blu-ray Discs, based on 5.1ch, but with a monaural Surround Back channel included by matrix encoding. The matrix decoder on this unit decodes this during playback to produce 6.1 channels.

- To enable transfer of this audio format, connect via digital cable and set audio output on the player to bitstream output.

**F.S.Surround (Front Stage Surround)**

In this mode, you can enjoy a virtual playback of multichannel surround sound even with only two or three speakers. This works by controlling how sounds reach the listener's left and right ears.

**Mono**

In this mode, when the input signal is analog or PCM, the left and right front speakers output the sound in monaural.

**PCM**

Mode suitable for playing sources recorded in multichannel PCM.

**Rock/Pop**

Mode suitable for rock content.

**Sports**

Mode suitable for sport content.
■ Stereo
In this mode, sound is output from the front left and right speakers and subwoofer.

■ Unplugged
Suitable for acoustic instruments, vocals and jazz. This mode emphasizes the front stereo image, giving the impression of being right in front of the stage.
### Selectable Listening Modes

You can select a variety of listening modes to suit the audio format of the signal being input.

- The Stereo mode can be selected with any audio format.
- When analog signals are being input in the Pure Direct mode, the modes switches to the Analog Direct mode which passes signals directly to the amplifier without passing through the DSP (Digital Signal Processor).
- Listening modes available when headphones are connected are Pure Direct and Stereo only.

\(^1\) Surround speakers or height speakers need to be installed.

\(^2\) A center speaker, surround speakers, or height speakers need to be installed.
You can use internet radio services such as TuneIn Radio, Pandora, Deezer, and TIDAL by connecting this unit to a network that has an internet connection.

- Depending on the internet radio service, the user may need to register from their computer first. Refer to the websites for each of the services for details about them.
- Functionality may be introduced by firmware updates and service providers may cease services, meaning that some network services and content may become unavailable in the future.

### Internet radio service menus

You can register certain stations as your favorites or delete stations you have registered from your favorites. The menu displayed depends on the service currently selected. Menu icons are displayed at the bottom right of the screen while playing a station. When just this icon is displayed, you can display the menu on the screen just by pressing ENTER on the remote controller. When multiple icons are displayed, select an icon with the cursors of the remote controller and press ENTER.

### Regarding the TuneIn Radio Account

Creating an account on the TuneIn Radio website (tunein.com) and logging in from the unit allows you to automatically add your favorite radio stations and programs to your “My Presets” on the unit as you follow them on the website. "My Presets" are displayed in the level under TuneIn Radio.

To display a radio station registered in "My Presets", you must log into TuneIn Radio from the unit. To log in, select "Login" - "I have a TuneIn account" in the "TuneIn Radio" top list on the unit, and then enter your user name and password.

- If you select "Login" on this unit, you can use the displayed registration code to associate this device on the My Page section of the TuneIn Radio website so that you can login to "Login" - "Login with a registration code" without having to enter your user name and password.

### Playing Back

1. Switch the input on the TV to that assigned to the unit.
2. Press NET on the remote controller to display a list of Network Functions on the TV.
3. Select the internet radio service you want with the cursors of the remote controller and press ENTER to confirm your selection.
4. Follow the on-screen instructions, using the cursors on the remote controller to select radio stations and programs, then press ENTER to play.

- To return to the previous screen, press ◀️.
Spotify Connect play is possible by connecting this unit to the same network as a smart phone or tablet.

- To play Spotify Connect, you need to install the Spotify application on your smartphone or tablet. You also need to create a Spotify premium account.
- Refer to the following for Spotify settings: www.spotify.com/connect/

**Playing Back**

1. Connect the smartphone to the access point that this unit is connected to.
2. Start the Spotify app.
3. Play the track in the Spotify app, then after switching to the screen for controlling play, tap "Devices Available" at the bottom of the screen.
4. Select this unit.
5. This unit turns on automatically and the input selector changes to NET and streaming of Spotify starts.

- If "System Setup" - "Hardware" - "Power Management" - "Network Standby" is set to "Off" in the Home, manually turn the unit on and then press NET on the remote controller.

**Notes for using multi-zone (for compatible models only)**

- To enjoy Spotify music in a separate room, manually select "NET" as the input of the separate room. After doing that, select this unit with the Spotify app.
- Volume adjustment with the Spotify app is possible only for speakers connected to the ZONE speaker terminals or when the volume of the audio device in the other room is configured so that its volume can be adjusted on this unit. Adjust the volume on the audio equipment in the other room in any other case.
- To enjoy Spotify music in the main room after playing it in a separate room, select "NET" as the input of the main room.
You can wirelessly enjoy the music files on an iPhone®, iPod touch®, or iPad® connected to the same access point as this unit.

- Update the OS version on your iOS device to the latest version.
- There may be some differences in the operations screens and how operations are performed on the iOS device depending on the iOS version. For details, see the operating instructions for the iOS device.

1. Connect the iOS device to the access point.
2. Press NET.
3. Tap the AirPlay icon in the play screen of the music app on the iOS device and select this unit from the list of devices displayed.
4. Play the music files on the iOS device.

- The default status is for the Network Standby feature to be on, so when you do steps 3 and 4 above, this unit automatically comes on and input switches to "NET". To reduce the amount of power consumed in standby mode, press the button on the remote controller, then in the Home displayed set "System Setup" - "Hardware" - "Power Management" - "Network Standby" to "Off".
- Due to the characteristics of AirPlay wireless technology, the sound produced on this unit may slightly be behind the sound played on the AirPlay-enabled device.

You can also play the music files on a computer with iTunes (Ver. 10.2 or later). Before operation, make sure this unit and the PC are connected to the same network, then press NET on this unit. Next, click the AirPlay icon in iTunes, select this unit from the list of devices displayed, and start play of a music file.
Music Server

Overview

Streaming play of music files stored on PCs or NAS devices connected to the same network as this unit is supported.

- The network servers this unit is compatible with are those PCs with players installed that have the server functionality of Windows Media® Player 11 or 12, or NAS that are compatible with home network functionality. You may need to make some settings in advance to use Windows Media® Player 11 or 12. Note that with PCs, only music files registered in the library of Windows Media® Player can be played.

Configuring the Windows Media® Player

**Windows Media® Player 11**

1. Turn on your PC and start Windows Media® Player 11.
2. In the "Library" menu, select "Media Sharing" to display a dialog box.
3. Select the "Share my media" check box, and then click "OK" to display the compatible devices.
4. Select this unit, and then click "Allow".
   - When it is clicked, the corresponding icon is checked.
5. Click "OK" to close the dialog.
   - Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

**Windows Media® Player 12**

1. Turn on your PC and start Windows Media® Player 12.
2. In the "Stream" menu, select "Turn on media streaming" to display a dialog box.
   - If media streaming is already turned on, select "More streaming options..." in the "Stream" menu to list players in the network, and then go to step 4.
3. Click "Turn on media streaming" to list players in the network.
4. Select this unit in "Media streaming options" and check that it is set to "Allow".
5. Click "OK" to close the dialog.
   - Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

Play

1. Start the server (Windows Media® Player 11, Windows Media® Player 12, or NAS device) containing the music files to play.
2. Make sure that the PCs and/or NASs are properly connected to the same network as this unit.
3. Press NET on the remote controller to display the network service list screen.
   - If the "NET" indicator flashes in the display, the unit is not properly connected to the network. Check the connection.
4. With the cursors on the remote controller, select "Music Server", and then press ENTER.
5. Select the target server with the cursors on the remote controller and press ENTER to display the items list screen.
   - The unit cannot access pictures and videos stored on servers.
   - Contents stored on the server may not be displayed depending on the server sharing settings.
6. With the cursors on the remote controller, select the music file to play, and then press ENTER to start playback.
   - If "No Item." is displayed, check whether the network is properly connected.
   - To return to the previous screen, press ➔.
   - For music files on a server, there can be up to 20,000 tracks per folder, and folders may be nested up to 16
• Depending on the media server, the unit may not recognize it, or may not be able to play its music files.

Controlling Remote Playback from a PC

You can use this unit to play music files stored on your PC by operating the PC inside your home network. The unit supports remote playback with Windows Media® Player 12. To use the remote playback function with Windows Media® Player 12, it must be configured in advance.

■ Setting PC

1. Turn on your PC and start Windows Media® Player 12.
2. In the "Stream" menu, select "Turn on media streaming" to display a dialog box.
   • If media streaming is already turned on, select "More streaming options..." in the "Stream" menu to list players in the network, and then go to step 4.
3. Click "Turn on media streaming" to list players in the network.
4. Select this unit in "Media streaming options" and check that it is set to "Allow".
5. Click "OK" to close the dialog box.
6. Open the "Stream" menu and check that "Allow remote control of my Player..." is checked.
   • Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.

■ Remote playback

1. Turn on the power of the unit.
2. Turn on your PC and start Windows Media® Player 12.
3. Select and right-click the music file to play with Windows Media® Player 12.
   • To remotely play a music file on another server, open the target server from "Other Libraries" and select the music file to play.
4. Select this unit in "Play to" to open the "Play to" window of Windows Media® Player 12 and start playback on the unit.
   • If your PC is running on Windows® 8.1, click "Play to", and then select this unit. If your PC is running on Windows® 10, click "Cast to Device", and select this unit. Operations during remote playback are possible from the "Play to" window on the PC. The playback screen is displayed on the TV connected to the HDMI output of the unit.

5. Adjust the volume using the volume bar on the "Play to" window.
   • Sometimes, the volume displayed on the remote playback window may differ from that appeared on the display of the unit.
   • When the volume is adjusted from the unit, the value is not reflected in the "Play to" window.
   • This unit cannot play music files remotely in the following conditions.
     − It is using a network service.
     − It is playing a music file on a USB storage device.
   • Depending of the version of Windows Media® Player, there may be differences in the names of items you can select.
Due to firmware (the software for the system) updates after you make your purchase or firmware changes during production of the product, there may be additions or changes to the features available compared to what is in the instruction manual.
For information about player functions that have been added or changed, see the following references. Refer to "Supplementary Information, etc." - "Supplementary Information" for information about changes to settings, etc., other than player functions.

Supplementary information for player functions

>>> Click here <<<
Troubleshooting

Before starting the procedure

Problems may be solved by simply turning the power on/off or disconnecting/connecting the power cord, which is easier than working on the connection, setting and operating procedure. Try the simple measures on both the unit and the connected device. If the problem is that the video or audio is not output or the HDMI linked operation does not work, disconnecting/connecting the HDMI cable may solve it. When reconnecting, be careful not to wind the HDMI cable since if wound the HDMI cable may not fit well. After reconnecting, turn off and on the unit and the connected device.

• This unit contains a microPC for signal processing and control functions. In very rare situations, severe interference, noise from an external source, or static electricity may cause it to lockup. In the unlikely event that this happens, unplug the power cord from the wall outlet, wait at least 5 seconds, and then plug it back in.

• Our company is not responsible for reparations for damages (such as CD rental fees) due to unsuccessful recordings caused by the unit’s malfunction. Before you record important data, make sure that the material will be recorded correctly.

When the unit is operating erratically

Try restarting the unit

Restarting the unit may help it operate more smoothly. To restart the unit, turn it to standby, and then press STANDBY/ON on the main unit for at least 5 seconds. (The unit’s settings will be maintained.) If there is no improvement even after the unit is restarted, try disconnecting and reconnecting the power cords of the unit and connected equipment.

Resetting the unit (this resets the unit settings to the default)

If restarting the unit doesn’t fix the problem, resetting the unit to the status at the time of shipment may solve the problem. If you reset the unit status, your preferences will be reset to the defaults. Note them down before the operation below.

1. While pressing the AUTO/DIRECT button on the main unit, press STANDBY/ON.
2. "Clear" appears on the display and the unit returns to standby. Do not unplug the power cord until "Clear" disappears from the display.

To reset the remote controller, while holding down MODE, press until the remote indicator flashes twice (3 seconds or more).

Power

Cannot turn on the unit

• Make sure that the power cord is properly plugged into the wall outlet.
• Unplug the power cord from the wall outlet, wait 5 seconds or more, then plug it in again.

The unit turns off unexpectedly

• The unit automatically switches to standby when the "System Setup" - "Hardware" - "Power Management" - "Auto Standby" setting in the Home screen functions.
• The protective circuit function may have been activated. If this has occurred, "AMP Diag Mode" appears on the display when the unit is turned on again, and the unit enters diagnostic mode. If the results of the diagnosis is that there is no problem, the "AMP Diag Mode" display disappears and you can use the unit normally again. If "CHECK SP WIRE" appears on the display, the speaker cables may be short-circuited. Make sure bare speaker wires are not touching each other or the back panel of the unit, then turn the unit on again. If "NG" is displayed, immediately unplug the power cord from the wall outlet and contact your dealer.
• The protective circuit function may have been activated because the temperature of the unit rose abnormally. If this happens, then the power will continue to turn off after you have turned the unit on again. Make sure the unit has plenty of space for ventilation around it, wait for the unit to cool down sufficiently, and then try turning it on again.

WARNING: If smoke, smell or abnormal noise is produced by the unit, unplug the power cord from the wall outlet immediately and contact the dealer or our company’s support.
Audio

- Make sure that the speaker setup microphone is not still connected.
- Confirm that the connection between the output jack on the device and the input jack on this unit is correct.
- Make sure that none of the connecting cables are bent, twisted, or damaged.
- If the $<$ indicator on the display flashes, press $<$ on the remote controller to cancel muting.
- While headphones are connected to the PHONES jack, no sound is output from the speakers.
- When "System Setup" - "Source" - "Audio Select" - "Fixed PCM" in the Home Menu is set to "On", no sound is played when signals other than PCM are input. Change the setting to Off.

Check the following if the above does not fix the problem:

- **There is no sound from the TV**
  - Change the input selector on this unit to the position of the terminal to which the TV is connected.
  - If the TV doesn't support the ARC function, along with connection by HDMI, connect the TV and this unit using a digital optical cable, digital coaxial cable, or analog audio cable.
- **No sound from a connected player**
  - Change the input selector on this unit to the position of the terminal to which the player is connected.
  - Check the digital audio output setting on the connected component. On some game consoles, such as those that support DVD, the default setting is off.
  - With some DVD-Video discs, you need to select an audio output format from a menu.
- **A speaker produces no sound**
  - Make sure that the polarity of the speaker cables ( +/−) is correct, and that no bare wires are in contact with the metal part of speaker terminals.
  - Make sure that the speaker cables are not shorting.
  - Check in "Connect the Speakers" in the Basic Manual that the speaker connections have been made correctly. Settings for the speaker connection environment need to be made in "Full Auto MCACC" in Initial Setup. Check in "Initial Setup" in the Basic Manual.
  - Depending on the source and current listening mode, not much sound may be produced. Select another listening mode to see if sound is output.
  - If you are installing surround back speakers (for compatible models only), surround speakers are required.
  - A maximum of 5.1 ch playback is possible when Bi-Amping connection is used (for compatible models only). Further, make sure you remove the jumper bar on the speakers when using Bi-Amping connection.
  - Refer to "Advanced Setup" - "System Setup" - "Speaker" - "Crossover" in the Advanced Manual for details.
  - When you play source material that contains no information in the LFE channel, the subwoofer produces no sound.
- **Noise can be heard**
  - Using cable ties to bundle analog audio cables, power cords, speaker cables, etc. may degrade the audio performance. Do not bundle cords.
  - An audio cable may be picking up interference. Try repositioning your cables.
- **The beginning of audio received by an HDMI IN cannot be heard**
  - Since it takes longer to identify the format of an HDMI signal than it does for other digital audio signals, audio output may not start immediately.
  - **Sound suddenly reduces**
    - When the temperature inside the unit exceeds a certain temperature for extended periods, the volume may be reduced automatically to protect the circuits.
Listening Modes

- To enjoy digital surround playback, such as Dolby Digital, the audio signals need to pass through a connection via HDMI cable, digital coaxial cable, or digital optical cable. Audio output should be set to bitstream output on the connected Blu-ray Disc player or other device.
- Press \( \equiv \) on the remote controller several times to switch the display of the main unit to check the input format.

Check the following if the above does not fix the problem:

**Cannot select a desired listening mode**
- Depending on the connecting status of the speaker, some listening modes may not be selected. Check in "Selectable Listening Modes" in "Listening Modes" in the Advanced Manual.

**There is no sound with Dolby TrueHD, Dolby Atmos, and DTS-HD Master Audio (for compatible models only)**
- You need to connect surround back speakers or height speakers to enjoy Dolby Atmos. Furthermore, Dolby Atmos can only be enjoyed when the input signals are Dolby Atmos.
- If you cannot output formats such as Dolby TrueHD, Dolby Atmos, or DTS-HD Master Audio according to the format of the source, in the Blu-ray Disc player settings try setting "BD video supplementary sound" (or re-encode, secondary sound, video additional audio, etc.) to "Off". Change the listening mode for each source after changing the setting to confirm.

**About DTS signals**
- With media that switches suddenly from DTS to PCM, PCM playback may not start immediately. In such cases, you should stop your player for about 3 seconds and then resume playback.
- With some CD and LD players, you will not be able to playback DTS material properly even though your player is connected to a digital input on the unit. This is usually because the DTS bitstream has been processed (e.g., output level, sampling rate, or frequency response changed) and the unit does not recognize it as a genuine DTS signal. In such cases, you may hear noise.
- Playing DTS program material, using the pause or skip function on your player may produce a short audible noise. This is not a malfunction.

Video

- Confirm that the connection between the output jack on the device and the input jack on this unit is correct.
- Make sure that none of the connecting cables are bent, twisted, or damaged.
- When the TV image is blurry or unclear, power code or connection cables of the unit may have interfered. In that case, keep distance between TV antenna cable and cables of the unit.
- Make sure the switching of input screens is proper at the monitor side such as a TV.

Check the following if the above does not fix the problem:

**There is no video**
- Change the input selector on this unit to the position of the terminal to which the player is connected.

**There is no picture from a source connected to an HDMI IN terminal.**
- To display video from the connected player on the TV while the unit is in standby, you need to enable "System Setup" - "Hardware" - "HDMI" - "HDMI Standby Through" in the Home screen. Refer to "System Setup" - "Hardware" - "HDMI" in "Advanced Setup" in the Advanced Manual for information about HDMI Standby Through.
- To output video to a TV connected to the HDMI OUT SUB jack (for compatible models only), in the "AV Adjust" displayed when \( \equiv \) is pressed on the remote controller, select the HDMI OUT jack for output in "Other" - "HDMI Out".
- Check if "Resolution Error" is displayed on the main unit display when video input via HDMI IN jack is not displayed. In this case, the TV does not support the resolution of the video input from the player. Change the setting on the player.
- Reliable operation with an HDMI-DVI adapter is not guaranteed. In addition, video signals from a PC are not supported.

**Images flicker**
- It is possible that the resolution of the player is not
compatible with the TV's resolution. If you have connected the player to this unit with an HDMI cable, try changing the output resolution on the player. There also may be an improvement if you change the screen mode on the TV.

**Video and audio are out of synch**
- Video may be delayed relative to audio depending on the settings and connections with your television. To adjust, press \( \text{\textcopyright} \) on the remote controller, and adjust in "Other" - "Sound Delay" in the "AV Adjust".

**Linked operation**

- **There is no linked operation with CEC compliant devices, such as a TV.**
  - In the Home screen of the unit, set "System Setup" - "Hardware" - "HDMI" - "HDMI CEC" to "On".
  - It is also necessary to set HDMI linking on the CEC compliant device. Check the instruction manual.
  - When connecting a Sharp brand player or recorder to the HDMI IN jacks, set "System Setup" - "Hardware" - "HDMI" - "HDMI Standby Through" to "Auto".

**BLUETOOTH function**

- Try plugging/unplugging the power of the unit and try turning on/off the BLUETOOTH wireless technology enabled device. Re-startup of the BLUETOOTH wireless technology enabled device may be effective.
- The BLUETOOTH wireless technology enabled devices must support the A2DP profile.
- Near components such as microwave oven or cordless phone, which use the radio wave in the 2.4 GHz range, a radio wave interference may occur, which disables the use of this unit.
- If there is a metallic object near the unit, BLUETOOTH connection may not be possible as the metal can effect on the radio waves.

Check the following if the above does not fix the problem:

- **Cannot connect with this unit**
  - Check that the BLUETOOTH function of the BLUETOOTH wireless technology enabled device is enabled.

- **Music playback is unavailable on the unit even after successful BLUETOOTH connection**
  - When the audio volume of your BLUETOOTH wireless technology enabled device is set low, the playback of audio may be unavailable. Volume up the BLUETOOTH wireless technology enabled device.
  - Depending on the BLUETOOTH wireless technology enabled device, Send/Receive selector switch may be provided. Select Send mode.
  - Depending on the characteristics or specifications of your BLUETOOTH wireless technology enabled device, playback on the unit is not guaranteed.

- **Sound is interrupted**
  - Problem may be occurring at the BLUETOOTH wireless technology enabled device. Check the information on the internet.

- **The audio quality is poor after connection with a BLUETOOTH wireless technology enabled device**
  - The BLUETOOTH reception is poor. Move the BLUETOOTH wireless technology enabled device...
closer to the unit or remove any obstacle between the BLUETOOTH wireless technology enabled device and this unit.

**Network function**

- If you cannot select a network service, it will become selectable when the network function is started. It may take about a minute to start up.
- When NET is blinking, this unit is not properly connected to the home network.
- Try plugging/unplugging the power supply of this unit and the router, and try rebooting the router.
- If the desired wireless LAN router is not in the access point list, it may be set to hide SSID or the ANY connection may be off. Change the setting and try again.

Check the following if the above does not fix the problem:

**Cannot access the Internet radio**

- Certain network service or contents available through the unit may not be accessible in case the service provider terminates its service.
- Make sure that your modem and router are properly connected, and make sure they are both turned on.
- Make sure that the LAN side port on the router is properly connected to this unit.
- Make sure that connecting to Internet from other components is possible. If connecting is not possible, turn off all components connected to the network, wait for a while, and then turn on the components again.
- If a specific radio station is unavailable for listening, make sure the registered URL is correct, or whether the format distributed from the radio station is supported by this unit.
- Depending on ISP, setting the proxy server is necessary.
- Make sure that the used router and/or modem is supported by your ISP.

**Cannot access the network server**

- This unit needs to be connected to the same router as the network server.
- This unit is compatible with Windows Media® Player 11 or 12 network servers or NAS that are compatible with home network functionality.
- When using a PC, only music files registered in the Windows Media® Player library can be played.

**Playback stops while listening to music files on the network server**

- Make sure the network server is compatible with this unit.
- When the PC is serving as the network server, try quitting any application software other than the server software (Windows Media® Player 12, etc.).
- If the PC is downloading or copying large files, the playback may be interrupted.

**USB storage device**

**USB storage device is not displayed**

- Check whether the USB storage device or USB cable is correctly inserted to the USB port of the unit.
- Disconnect the USB storage device from the unit, and then try reconnecting.
- Performance of the hard disk that receive power from the USB port of the unit is not guaranteed.
- Depending on the type of format, the playback may not be performed normally. Check the type of the file formats that is supported.
- USB storage devices with security functions may not be played.
Wireless LAN Network

- Try plugging/unplugging the power supply of wireless LAN router and the unit, check the wireless LAN router power-on status, and try reboot of the wireless LAN router.
- Check the following if the above does not fix the problem:

  ■ Cannot access wireless LAN network
  - The wireless LAN router setting may be switched to Manual. Return the setting to Auto.
  - Try the manual set-up. The connection may succeed.
  - When the wireless LAN router setting is at stealth mode (mode to hide the SSID key) or when ANY connection is off, the SSID is not displayed. Change the setting and try again.
  - Check that the setting of SSID and encryption (WEP, etc.) is correct. Make sure the network settings of the unit is properly set.
  - Connection to an SSID that includes multi-byte characters is not supported. Name the SSID of the wireless LAN router using single-byte alphanumeric characters only and try again.

  ■ Connected to an SSID different to the SSID selected
  - Some wireless LAN routers allow you to set multiple SSIDs for one unit. If you use the automatic setting button on such a router, you may end up connecting with a different SSID from the SSID you wanted to connect to. Use the connection method requiring you to enter a password if this happens.

  ■ Playback is interrupted and communication does not work
  - You may not receive radio waves due to bad radio wave conditions. Shorten the distance from the wireless LAN access point or remove obstacles to improve visibility, and try again. Place the unit away from microwave ovens or other access points. It is recommended to place the wireless LAN router (access point) and the unit in the same room.
  - If there is a metallic object near the unit, wireless LAN connection may not be possible as the metal can effect on the radio wave.
  - When other wireless LAN devices are used near the unit, several issues such as interrupted playback and communication may occur. You can avoid these issues by changing the channel of your wireless LAN router.
  - For instructions on changing channels, see the instruction manual provided with your wireless LAN router.
  - There may not be enough bandwidth available in wireless LAN. Connect using an Ethernet cable.

Multi-zone function (for compatible models only)

- Cannot ZONE output audio of external AV component
  - Depending on the model, input by HDMI cable may not be supported. Check in "Multi-zone Connection" in the Basic Manual, and if input by HDMI cable is not supported, connect using a cable that is supported.
  - The audio from externally connected AV components can only be output when the audio is analog or 2ch PCM audio signals. If you have connected the AV component to this unit with a digital optical/coaxial cable, the audio output of the AV component needs to be set to PCM.

- Others
  - Settings are required in Initial Setup, "Multi Zone Setup" to use the multi-zone feature. Check in "Initial Setup" in the Basic Manual.
  - If the audio signal is from the NET or USB input selector, zone output is not possible for DSD and Dolby TrueHD audio signals.

Remote Controller

- Make sure that the batteries are installed with the correct polarity.
- Install new batteries. Do not mix different types of batteries, or old and new batteries.
- Make sure that the unit is not subjected to direct sunshine or inverter-type fluorescent lights. Relocate if necessary.
- If the unit is installed in a rack or cabinet with colored-glass doors or if the doors are closed, the remote controller may not work reliably.
- After operating the Multi-zone function (for compatible models only), the remote controller may have switched to the mode for operating ZONE output audio. Check "Multi-zone" in "Playback" in the Basic Manual to switch the remote controller back to the mode for operating in the main room.

Display

- The display doesn’t light
  - The display may go dim while the Dimmer is working, and may also turn off (for compatible models only).
  - Press DIMMER button and change the brightness level of the display.

Others

- Strange noises can be heard from the unit
  - If you have connected another unit to the same wall outlet as this unit, this noise may be an effect from the other unit. If the symptoms improve by unplugging the power cord of the other unit, use different wall outlets for this unit and the other unit.

- When performing Full Auto MCACC, the message "Noise Error" appears
  - This can be caused by a malfunction in your speaker unit. Check if the speakers produce normal sounds.

- The results of Full Auto MCACC give a different distance to the speakers than the actual distance
  - There may be some discrepancies in the results depending on the speakers you are using. If this is the case, make the settings in "System Setup" - "Speaker" - "Distance".

- DRC function does not work
  - Make sure the source material is Dolby Digital, Dolby Digital Plus, Dolby TrueHD, or DTS.
Radio Wave Caution
Products with Wi-Fi/BLUETOOTH use radio waves in the 2.4 GHz and 5 GHz frequency bands. There are nations and regions where the use of particular 5 GHz bands are prohibited outdoors, so do not use these products outside.

2.4 GHz radio waves are used by a variety of devices, as shown in lists 1 and 2 below.

1. Devices which use a 2.4 GHz radio wave frequency
   - Cordless phones
   - Cordless facsimiles
   - Microwave ovens
   - Wireless LAN devices (IEEE802.11b/g/n)
   - Wireless AV equipment
   - Wireless controllers for game systems
   - Microwave oven-based health aids
   - Video transmitter
   - Specific type of external monitor and LCD display

2. Less common devices which use a 2.4 GHz radio wave frequency
   - Anti-theft systems
   - Amateur radio stations (HAM)
   - Warehouse logistic management systems
   - Discrimination systems for train or emergency vehicles

If these devices and the AV receiver are used at the same time, the audio may be undesirably stopped or disturbed due to a radio wave interference.

Suggestions for improvement
- Switch off the devices which emit the radio wave.
- Place the interfering devices away from the AV receiver.
- The AV receiver uses radio wave, and a third person can receive the wave on purpose or accidentally. Do not use the communication for important or fatal matters.
- We assume no responsibility whatsoever for any error or damage of network environment or access device resulting from the use of this apparatus.

Scope of Operation
Use of the AV receiver is limited to home use. (Transmission distances may be reduced depending on communication environment.) In the following locations, poor condition or inability to receive radio waves may cause the audio to be interrupted or stopped:
- In reinforced concrete buildings or steel framed or iron framed buildings.
- Near large metallic furniture.
- In a crowd of people or near a building or obstacle.
- In a location exposed to the magnetic field, static electricity or radio wave interference from radio communication equipment using the same frequency band (2.4 GHz) as the AV receiver, such as a 2.4 GHz wireless LAN device (IEEE802.11b/g/n) or microwave oven.
- If you live in a heavily populated residential area (apartment, townhouse, etc.) and if your neighbor’s microwave oven is placed near your AV receiver, you may experience radio wave interference. If this occurs, move your AV receiver to a different place. When the microwave oven is not in use, there will be no radio wave interference.

Radio Wave Reflections
The radio waves received by the AV receiver include the radio wave coming directly from the devices and waves coming from various directions due to reflections by walls, furniture and building (reflected waves). The reflected waves (due to obstacles and reflecting objects) further produce a variety of reflected waves as well as variation in reception condition depending on locations. If the audio cannot be received properly due to this phenomenon, try moving the location of the wireless LAN device a little. Also note that audio may be interrupted due to the reflected waves when a person crosses or approaches the space between the AV receiver and the wireless LAN device.
- We assume no responsibility whatsoever for any damages resulting from the use of this apparatus except in the cases deemed acceptable under the applicable laws and regulations.
- Operation in all environment is not guaranteed for wireless LAN. The communication may not be possible or have desirable communication speed.

Precautions
- Do not use this apparatus near an electronic device handling high-accuracy controls or weak signals. Doing so may cause an accident due to a malfunction of the device.
- Do not use this apparatus in use prohibited location such as an aircraft equipment or a hospital. Doing so may cause an accident due to a malfunction of an electronic device or an electro-medical apparatus. Follow the instructions of the medical facilities.

Electronic device which requires cautions
Hearing aid, pace maker, other medical electronic devices, fire alarm, automatic door, and other automatic control device.
When using a pace maker or other medical electronic devices, confirm with the medical electronic device maker or dealer for the effect of the radio wave.
Due to firmware (the software for the system) updates after you make your purchase or firmware changes during production of the product, there may be additions or changes to the settings and operation available compared to what is in the instruction manual. For information about the settings and operations that have been added or changed, see the following references. Refer to "Network Functions" - "Supplementary information for player functions" for information about changes to player functions.
